Don't get me started about parents who are just going through the motions.
There are plenty out there.

I side with Sid on this issue.

Responsible parents, myself included, take an active interest in what their kids are doing.

> Shield your children from vulgarity, if that floats your boat.  Don't presume to shield me or any other adult from it, just because you don't want your children to hear it.  That's not government's job.  That's yours.

Preach it, Brother!

If these are what I think they are, they are modular things that can use
a similar frame for video and audio cards.

I know I have docs on the video and video sync cards, but I don't think I
have any of the audio cards.

>These are transformer-coupled (UTC 0-11 input, A-22 output) and use

>schematics for the power supplies, too.

The power supplies are brute-force linear supplies with series regulation. Nothing fancy, just dual regulated supplies with a zener and a junk pass transistor; you can find an identical design in the ARRL Handbook.

The germanium transistor amps are sort of doubtful, but whatever you do, replace the coupling capacitors.  As I recall, they do use real bias resistors instead of relying on leakage like some more sleazy designs of that era.

>I was originally planning to harvest the transformers and throw away
>the rest, but I might keep them intact since they're apparently pretty
>rare (at least I've never seen one before) and just might sound cool.

Try it.  Those things were very common in the video industry, and you know how video guys feel about sound...

>Preach it, Brother!

The debate about vulgarity and innocent ears misses a larger point: broadcasting is supposed to be a service to the public. The overwhelming bulk of what I've heard lately on the radio surely serves no one but stockholders and creditors.

The experience of the past 20 years shows that an unregulated marketplace leads to a "race to the bottom": programming that informs and uplifts gives way to programming that shocks and titillates. The proliferation of stations and subsequent ownership consolidation has led inexorably to "narrowcasting" to tiny slices of the demographic pie across community lines instead of broadcasting to a whole community; hence the replacement of local full-service stations with "cookie-cutter" formats repeated on station after station from coast to coast.

Talk radio is a wasteland; from one-sided ranting and uninformed speculation about important (and not-so-important) events to snake-oil informercials and "sex for Sam" contests, there's very little there to benefit the listener.

Music radio has become a soulless, robot-driven monotony; the marketers and research pseudoscientists are in the driver's seat, it would seem.

In Boston, one company supplies virtually every radio station in town with news. And it does a spectacularly poor job.

I submit that this is what you get when you "deregulate" the public airwaves into a commodity that can be freely bought and sold.

Society has an interest in managing the radio spectrum for the benefit of all its members. When it surrenders spectrum to private companies without obliging them to operate in the public interest, it does us all harm. The mass media are one of the principal means by which we as members of society share cultural, social, and artistic values. Misused by someone with narrow self-serving goals, the media can do a lot of damage. I've heard several broadcasters claim their programming only reflects the prevailing mood and mentality of their audiences and doesn't influence them; I think these broadcasters must be deceiving themselves. After all, what advertiser would want to use radio if it didn't influence listeners' buying habits?

In my view American radio is off the rails, and the indecency issue is just a small symptom of the much larger problem.

For sale:

(It is baaaaaaaaaak!!! The "Radio Crazy" is loose!)

Partial ownership in 1 KW daytime AM station near Albany, NY. College town. Some night power. Lots of valuable land included.

Only $120,000 asking price.

Joint venture. Active or inactive investors with at least $10,000 min. are welcome. All investors would be on the board with full voting rights if desired.

No individual may own over 49 percent. This to protect from "bullies". This rule applies to me, too!

This is a completely valid, but also completely tangential, point.

I think that if we are going to rant about *this* topic, it should be done in a separate thread.

[ Excellent points snipped ]

> In my view American radio is off the rails, and the indecency issue is

Here's notice of an upcoming DX test...

PLEASE NOTE: Even if you don't hear a test, be sure and drop a card, letter, or e-mail to the station personnel, thanking them for going to the trouble to run a test!

Sunday, February 15, 2004 - WQMA-1520, Marks, MS will conduct a DX test from 12:00am-2:00am CST. Per information from WQMA announcer Paul Walker, Jr. (via DXer John Lentz of Muskego, WI), "WQMA will be conducting a DX Test on February 15th at 12AM Central...1520Khz with 250 watts ND.
WQMA Marks, Mississippi in Northwest MS....about 65 miles south of Memphis. 150 foot Rohn 25 Tower, guyed...Armstrong X1000 Transmitter....Harris Mono 5 Rotary Pot". The station, normally CHR,

will run "special programming" during the test.

Reception reports may be sent to:

WQMA / Q1520 Radio
1820 West Marks Road
Marks, MS 38646

WWW: http://www.q1520radio.com/
Also, please see
http://myweb.cableone.net/jkonarz/q1520radiocom/test.html for some
information about recording the test.

(Arranged by Paul Walker, Jr.)

Also, if you hear a test, PLEASE, PLEASE let me know, via either
e-mail or in rec.radio.shortwave! And if you send a reception report
to
a station, please remember to include return postage with your
report...

Lynn.

Why would you want to do this?  It first defeats the whole purpose of
realaudio, and secondly (and more seriously) layers two lossy compression
systems on top of one another for more nasty artifacts.

```

I would like some advice on what is the most proper and effective way to issue a complaint with the FCC regarding harmful interference being caused by a radio station that is using the IBOC digital system.

The station in question is 710 WOR in New York City, which has been using the IBOC digital system since October 2002.  And since that time, they have been causing harmful interference to frequencies as far as 40 kHz away from their carrier -- across a region of at least 680 through 750 kHz.

I have observed this interference throughout northern and central New Jersey -- at locations up to and beyond 50 miles away from WOR's transmitter site -- on a wide variety of receivers, ranging from highly selective car radios to hi-fi AM Stereo receivers.  And tellingly, this interference completely disappears the instant that WOR stops transmitting their IBOC digital sidebands at sunset each day.

Of course, I understand the fact that the IBOC system is designed to occupy a 30 kHz total bandwidth, including 15 kHz above and below the station's carrier. Thus, when WOR's IBOC is in use, I do not expect to be able to receive anything but noise on 700 and 720 kHz, and I expect my reception on 690 and 730 kHz to be severely degraded, if possible at all. That is indeed what I am observing, but that is not my complaint.

My complaint is about the scratchy, crackly type of "splatter" interference that WOR is causing to be heard on 680 through 750 kHz whenever their IBOC system is in use. This interference varies in intensity in accordance with WOR's analog modulation -- the "louder" their audio is, the more severe the interference is. Thus, by these indications, this interference appears to be very similar in nature to the wideband splatter caused by an analog AM station that is consistently exceeding the -100% negative modulation limit, or by a station whose directional antenna array is affecting their signal to such a degree that a similar receiver-based effect is being produced, especially towards the signal's "nulls".

Having mentioned this to WOR's engineers numerous times, their claim is that according to the modulation monitor and spectrum analyzer at their transmitter site, WOR's radiated signal (with IBOC in use) falls within the NRSC radiated emission limits, and therefore is "legal" -- end of story. They have refused to conduct any field measurements that might support or dispute my claims, other than "it sounds fine on my car radio". In fact, WOR's engineers have even threatened legal action against me, because of my claims that WOR is operating "illegally". Needless to say, this has resulted in a breakdown in communication between them and I. I have chosen not to discuss this issue with WOR's engineers any longer, because nothing was being accomplished.

But now that WOR has made headlines in national radio publications, boasting about the success of their IBOC installation, I feel the time has come to address these issues, and put it in the hands of the FCC and more capable engineers to decide whether or not WOR's IBOC signal is causing harmful interference and/or is exceeding the FCC's radiated bandwidth specifications. In particular, WOR's Director of Engineering brings into question the performance of their directional antenna array and how it may be affecting their IBOC signal -- stating in his Radio World article, "It should also be noted that the pattern bandwidth of our null is not great. On a spectrum analyzer, WOR's upper sideband does not exist north of Paramus, NJ".

Obviously, that kind of problem can seriously degrade an analog AM signal, and would be particularly harmful to the quadrature-modulated component of an AM Stereo signal. But what would the complete lack of an upper sideband do to an AM IBOC signal, which also makes use of quadrature modulation? That is a big question mark, because nobody has ever addressed it before -- not the FCC nor the NRSC -- and because WOR's engineers are apparently not concerned about it enough to conduct any field tests with and without their IBOC signal in use.

Obviously, as one of the very few AM stations in the world using the IBOC system, WOR is essentially "flying by the seat of their pants" --

and in that regard, I can cut them some slack as they continue to experiment with it. But to consistently ignore and dismiss these interference issues is a serious problem -- especially during these short winter days, when skywave propagation during the early morning and late afternoon "critical hours" can cause WOR's IBOC signal to interfere with distant stations, including several in Canada, such as 690 CINF and 730 CKAC in Montreal and 740 CHWO in Toronto. In fact, I distinctly remember tuning in 740 kHz on my car radio a full hour before local sunset and hearing CHWO's signal coming in with heavy interference from WOR's IBOC "splatter". That was observed in Princeton, NJ, nearly 50 miles away from WOR's transmitter site.

So, to sum up this long-winded message up, since my attempts to address these issues directly with WOR have failed, how should I go about bringing it to the FCC's attention? Hopefully they can take some time our from their crusade against non-existent third-adjacent-channel interference from LPFM stations to address a much more significant interference issue on the AM band....

Yer just a young'un; I've been Usenetting for the better part of fifteen years...

I would like to see some form of authentication, perhaps using PGP, to help avoid stuff like this, and I have heard that the much-touted Usenet2 was supposed to have helped in that regard... but Usenet2 never really got off the ground...

The FCC apparently didn't take areas with high soil conductivity into consideration when they wrote this.

Here in South Dakota, strong AM daytime signals propagate for 200 or more miles.  KFYR, WNAX, KSDN, KFGO, KSJB, etc. are all examples of this.  And these stations are only putting out 5,000 watts.  Over in the Black Hills, KBHP runs 25,000 watts on 810 and can easily be heard up and down I-29 on the opposite side of the state.  That's 300-350 miles from the transmitter.

But that's okay.  We're used to being ignored by the bureaucrats in Washington, DC :-)

The antenna pattern can cause the audio to sound distorted (because the
carrier is lower than the sideband you're hearing) but it won't move
any energy out of band or in particular cause splatter.

You can be sure WOR's operation is entirely in accord with the FCC's rules. By now the local FCC field office will have checked them out six ways to Sunday.

The problem is not WOR. The problem is that digital modulation schemes tend to require more bandwidth than analog schemes. As a result, neither the AM nor the FM form of "HD Radio" is truly in-band, on-channel; in-band, adjacent-channel is a more accurate description.

The January 2 issue of _Radio World_ contains an article describing a Chicago FM station's experiences with "HD Radio", and notes that several stations in adjacent markets, having complained to the FCC about interference from this station's "HD Radio" signal, have been told they have to put up with it. The official line seems to be that stations are only licensed to provide coverage out to their protected contours, and anything they cover beyond that is subject to whatever interference may arise in the future, whether from "HD Radio", LPFM, local computer networks, or whatever.

I believe this position is poor policy because a lot of smaller stations are dependent on coverage beyond the protected contour for their economic survival. These are, for the most part, stations that were "dropped in" over the past twenty years as "rimshots" to various markets, licensed to suburbs or rural communities that can't realistically support them. Deprived of access to adjacent markets, many of them are likely to become unsustainable, I think.

If the FCC wants to pretend stations serve no listeners beyond their protected contours, then it should not be authorizing stations that can't prosper within those contours.  Moreover, it ought to recognize that just as broadcast spectrum is a limited resource, so are advertising dollars in any community, and it is not necessarily the case that more stations on the air mean better service. But I digress.

The bottom line is I believe IBOC is a mistake, and many stations and their listeners will suffer because of it.

You could choose to read it on Usenet and killfile the posters whose
posts you don't want to see. That way, the people who *do* want to
read these posts could still see them.

If this group were getting a hundred posts a day, it might make
sense not to allow certain types of posts with a higher than average
annoyance factor. But this is a low traffic group; some days I see
no posts at all on it.

Sadly, they are probably right.  Write a letter to your local FCC field bureau and let them know what you've heard and what you've been through.

My bet is that the FCC will send someone out with a spectrum analyzer to look at the spectral envelope, and it'll be totally legal.  It is pretty depressing to see what is legal.

The FCC pretty much only responds to letters, but they do actually respond to letters.

It's David who is oversimplifying. That statement couldn't have come from
anyone in the broadcast allocation part of the FCC.

The FCC rules definitely require consideration of ground conductivity. The
old printed rules contain a conductivity map and propagation curves for each
AM frequency for each conductivity.  THAT is the basis upon which AM
stations are allocated and power and directional antennas specified.

Is there a utility that can look at a directory full of wav files and report if any of them are corrupt in any way?

Ideally, it would also report the sampling rate and bit rate of the files.

The "IBOC" surely falls within the emission mask that has existed for a long time. Problem is that before IBOC, what fell toward the edges of the mask was the ocassional zing or sput.  Now IBOC fills it chock full on a full-time basis.  We have the mask used to condon a type of emission for which it was NOT designed.

> The January 2 issue of _Radio World_ contains an article describing

The flood of FM translator applications will be judged on the same basis, further limiting the real coverage of FM stations.

> I believe this position is poor policy because a lot of smaller

I don't have sympathy for the rim-shots which never had any intention of serving the town they used to justify "first local service" in order to get their license.

> If the FCC wants to pretend stations serve no listeners beyond
> their protected contours, then it should not be authorizing
> stations that can't prosper within those contours.

The FCC hasn't required applicants to even file fake income projections for a number of decades.  Their policy is to allow as many stations as the technical rules permit, and they've watered down the tech rules over the years in order to allow more stations.  Every Congressperson has had a friend who wanted a radio station.

> Moreover, it
> ought to recognize that just as broadcast spectrum is a limited

> service.

Ever hear of "Let the marketplace decide".  Those phone calls from Capitol Hill would keep the FCC busy full time if they tried to use the kind of judgement you recommend.

> The bottom line is I believe IBOC is a mistake, and many stations
> and their listeners will suffer because of it.

I certainly agree with you.  And the flood of more FM translators will further degrade the service of existing stations.

Sigh!

Nope. I clearly labeld my post as having been copied formt he FCC website,
where there is a "consumer grade" explanation of why AM staitons have
different coverage by day and night. I think the intent is to show that
there is a reason for the differences in general terms, without getting into
concepts such as the ground conductivitie of rock, sand or laomy soil.

> The FCC rules definitely require consideration of ground conductivity. The
> old printed rules contain a conductivity map and propagation curves for
each

But this is not the basis for the explanation on the FCC website, which is not guidance for engineers but for average, non-technical listeners.

In any case, the income projections were intended to show that an applicant
coulda fford to build and operate the station, not the overall ability of a
market to support additional signals. It was called "Financial
qualifications" and had nothing to do with competition.

David, it seems that you understand the answer to my question beautifully. Unfortunately, I can't understand it. Would you mind dropping the complexity of your answer a couple of notches and re-iterating? Thanks. --Matt

"David Eduardo" <radiodavid@yahoo.com> wrote

> At night, nearly every AM in the US gets skywave intereference, due to the nature of AM night propagation. Distant signals interfere with what are unobstructed day signals, even if the station has the same power.

Huh? Why only at night? Why unobstructed in the daytime only? What is a skywave?

> The only exceptions are clear channel stations, which get a coverage increase due to skywave and being on realtively protected channels.

What is a clear channel station?

> Stations, to operate at night (nearly 35% don't) have to protect other stations on the same frequency, sometimes as much as 1000 miles or more away. Because of this, at night they may cut power or directionalize where htey send it to avoid interference, or both.

Why do they have to protect other stations? From what? And why only at night?

> The ionesphere makes AM signals skip form just before sunset to just after sunrise. This is why many US stations are daytime only, since they could not run at night without causing interference to others.

How does the ionosphere make AM signals skip, and why only at night?

> It's due to the laws of physics. Newer stations protect older ones. And many can not even run at night.

Why do newer stations protect older ones? Why can't they run at night?

Hey Benders, bring back polka music to your station. You shouldn't have taken it off in the first place.  Shame on you.  Remember that you used to host the old Studio A shows.  I guess you really hated polkas after all.

What is the BEST handheld mic for eng work ??

Audio Technica - ATM31A
Beyer - M58
Beyer - MCE58
EVI - RE50
EVI - 635A
Sennheiser - MD46
Shure - SM63
Shure VP64AL

Use will be for doing interviews at noisy trade shows and such.

Using with Marantz PMD670... So phantom power mic is a OK :-)

Thanks

Scott

Why do newer stations protect older ones?
>>

Because AM is a "demand allocation" system, not a "table allocation" system.

IOW, for AM, the first station on a frequency has absolute priority over every subsequent station on the same and adjacent frequencies.

Corrupt in ANY way? No, it's not possible.

I could take a completely valid wave file and replace the data
chunk with nothing more than random numbers, and as long as I get
the chunk header right, it's a valid wave file. I could swap all
the bytes of all the samples And it would sound AWFUL) and as long

as the chunk headers are right, it's a valid wave file. I could
change the sample rates around and as long as I maintain consistency
in the fmt chunk, it's a valid wave file. I could take an MPEG
wave file, change the fmt chunk to say it's PCM format, and, again,
as long as everything is consistent, it's a valid wave file, even
though the file is very audibly corrupted.

You CAN find things like contradictions in parts of the fmt chunk,
invalid lengths of chunks, missing fmt extension for non-PCM formats
and such.

> Ideally, it would also report the sampling rate and bit rate of the
> files.

There are probably a bunch of things out there, but check out
www.cartchunk.org for one WAVE utility whose intent is to
display metadata in WAVE files, including support for EBU and
AES-46-2003 compliant WAVE files.

>Why only at night?  Why unobstructed in the daytime only?<

Radio waves radiate more or less in all directions from an AM tower, meaning
that some of them radiate skyward.

The ionosphere, in the presence of solar radiation (i.e., during the day), absorbs the radio waves.  In the absence of solar radiation (i.e., during the night), it becomes a reflector, bouncing the signals back to earth hundreds or thousands of miles beyond the transmitting tower.  This can create interference with stations on the same or adjacent frequencies at night, where no such interference would occur during the day.  To avoid such interference, many stations must either cut transmitter power at night, or employ directional antennas...or sometimes both.

>What is a skywave?<

Radio waves reflected by the ionosphere under nighttime conditions.

>What is a clear channel station?<

It's now an obsolete term, but "clear channels" were AM frequencies with only one station on them.  What are now referred to as "clear channel" stations (not to be confused with Clear Channel Communications, the group station owner) are for the most part the 50-kW AM stations using non-directional antennas, many of which have been around since AM radio's early days of the 1920's.

>Why do they have to protect other stations?<

The AM band is organized as "first come, first served."  Stations that were broadcasting first get priority, and are protected from interference by stations that came later, through the use of lower power or directional antennas.

>why only at night?<

See above, re the changes in the ionosphere depending on whether or not the sun is up.

>Why do newer stations protect older ones?<

FCC rules, plus international treaties to which the United States is a signatory.

The amateur radio posts have nothing to do with the ARRL (American Radio
Relay League).  They are from another group devoted to amateur radio.
I'm actually not sure if it's the group doing the posting or if
it's a third party.

They don't belong here because amateur radio has nothing to do
with broadcasting (beyond a common history that started with
some people being less interested in radio as a hobby so they
simply built or bought receivers (becoming listeners
at a time when nobody had much idea for using the medium), and then hams
became aware of this so they started broadcasting, ie speaking
to all those listeners at home, and then deliberately setting out
to be broadcast stations.

No, I think they land here because someone is simply going after the "radio" angle in the newsgroup name, just like someone posted an ad in the past week looking for WWII surplus receiver, that has nothing to do with broadcast either.

The only possible reason that the Amateur Radio Newsline posts belong here is if it's seen as a source of broadcast material for news outlets or news programs on broadcast stations.  And I'm not sure that fits in here; either it opens the gates for all kinds of similar groups posting their stuff in the hopes that broadcast people will see it and make use of the stories, or nobody is reading it and then there's no point.

Keep in mind that the posts are really accessible if anyone is interested.  At the same time they post here, they post to a number of newsgroups in the pertinent hierarchy, rec.radio.amateur.*  At the very most, this point only needs to be added to a periodical post here of repetitive matters (such as what is on topic).  Indeed, such a post could be made to the newsgroup only (where random people are likely to be enticed to post), rather than to the mailing list too.

Realistically, the judge of what's acceptable should be it's relevants to the newsgroup topic.

  Michael

I have less concern for the "rimshots" than I do for the 50KW blowtorches that actually derive ratings from beyond their protected contours.

KGO has been #1 in San Francisco since dirt was invented. What I'm

watching is what effect wiping out such stations' profitable fringes
will have on their numbers. WOR actually gets some numbers in
Philadelphia. What happens if another IBOC station wipes out WOR in
Philly? Will it be enough to drop their overall share from 1.8 to 1.6?
It'll take a number of years before we'll know how many stations will
be wiped out, and where.

It strikes me that IBOC is mutually assured destruction.

Dirty Word Ban

To amend section 1464 of title 18, United States Code, to provide for the
punishment of certain

profane broadcasts, and for other purposes. (Introduced in House)

HR 3687 IH  108th CONGRESS 1st Session

H. R. 3687

To amend section 1464 of title 18, United States Code, to provide for the
punishment of certain

profane broadcasts, and for other purposes.

IN THE HOUSE OF REPRESENTATIVES

December 8, 2003

Mr. OSE (for himself and Mr. SMITH of Texas) introduced the following bill;
which was referred to

the Committee on the Judiciary

A BILL
To amend section 1464 of title 18, United States Code, to provide for the
punishment of certain

profane broadcasts, and for other purposes.

Be it enacted by the Senate and House of Representatives of the United States
of America in

Congress assembled, That section 1464 of title 18, United States Code, is
amended--

(1) by inserting `(a)' before `Whoever'; and

(2) by adding at the end the following:

`(b) As used in this section, the term `profane' , used with respect to
language, includes the

words `shit', `piss', `fuck', `cunt', `asshole', and the phrases `cock sucker',
`mother fucker',

and `ass hole', compound use (including hyphenated compounds) of such words and
phrases with each

other or with other words or phrases, and other grammatical forms of such words
and phrases

(including verb, adjective, gerund, participle, and infinitive forms).'.

shit piss fuck cunt asshole cock sucker mother fucker ass hole

The Exact Audio Copy program checks for corruption when ripping a file from a CD to WAV format. But I don't think it can analyze existing files.

In principle, you could write a program that opened and read the WAV file, looking for such things as excessively long all-zero or full-scale sequences, or abrupt jumps in sample values.

I have obtained several of these. They were being used as line amplifiers at my job, but are now being replaced. I've contacted the present owner of the Dynair name in search of a schematic, but apparently they can't help me. I thought I'd post this request on usenet before I have to take the trouble to trace out the circuit and draw my own schematic.

These are transformer-coupled (UTC 0-11 input, A-22 output) and use four Motorola 2N697 TO-5 transistors. They mount in a 2RU frame along with a power supply (model PS-3015B or PS-3015C). I'd love to find schematics for the power supplies, too.

I was originally planning to harvest the transformers and throw away the rest, but I might keep them intact since they're apparently pretty rare (at least I've never seen one before) and just might sound cool.

Thanks.

Thanks, that's very interesting.  Now, why is it that the ionosphere
absorbs radio waves in the presence of solar radiation, but not in its
absence?

>>
What is a table allocation system?
>>

Tables are published for FM and TV, which allocate FM channels and TV channels to specific cities.

Yes, FM has channels, starting with 200, although 201 is the lowest channel actually allocated, while 200 is reserved for situations where 201 or higher won't work.

The tables can be read on-line.

Modifications to the tables have been done from time to time.

Yes they have a few competitors... We at KissFM Moldavia have started using
Radio Exclusive for couple of months now and are very satisfied with their
service.

'regards
Jess

I missed the original post so I'm not sure what you mean by corrupt but they certainly can be corrupt: missing or fouled headers; headers that are correct but the data is corrupt; etc. The second kind is the hardest to detect because the OS thinks they are fine and will even open them and they will "play" somewhat (even though it's usually ear crunching noise). I don't know of a program that will detect the second type but you might be able to either copy the files to another directory and see if the copy fails. That would be my first step. That might tell you which files are physically corrupt. Secondly you might be able to use something like Windows Media Player and just play the whole directory (like a playlist). If any files fail to open or if they play noise you'll know they are corrupt. Of course someone while have to sit and monitor it but you can "fast forward" to the next one when you know the file is OK.

>Federal Communications Commission Chairman Michael Powell has asked his fellow commissions to reverse a decision made by the agency's enforcement bureau that OK'd U2 singer Bono's use of the F-word on television.<

In other words, screw the Commission's own rules (which the ruling on the f-word was in strict accordance with) and screw the First Amendment. Son-of-Colin doesn't like THAT WORD!!!!!!!!, so it MUST go!!!!

The visual image of FCC members and Congress-critters falling all over each other trying to have certain words banned from the airwaves would be laughable if it weren't so pathetic.

But, what the heck...let's just repeal the First Amendment and be done with it. It's obviously become a gross inconvenience to the Michael Powells and Donald Wildmons of the world, who feel the need to control what we see and hear. Totalitarianism by any other name would smell just as rotten.

No, WAV files are NOT raw files. Wave files have format information,
enabling a wav reader to fully interpret the contents. A raw audio
file simply has samples, no format, no sample rate, no nothing.

On CAN detect corruption in the various chunks, like the fmt
chunk (bogus sample rate, inconsistent average byte rate, and
so on), one can detect whetehr chunk headers are corrupted, and
so on.

But, even if its MPEG encoded, one may net necessarily be able to
detect if the audio DATA is corrupted. (Yes, WAV files CAN be MPEG
format).

Does anyone know a program that can convert Realaudio files (.ra, .ram or
streaming) to mp3?
I would be thankful for an answer.
Dan

>The Exact Audio Copy program checks for corruption when ripping a file from a CD
>to WAV format. But I don't think it can analyze existing files.

Reading from the CD is different, because the drive gives errors
when it can't read/reconstruct a sector from the CD. Also, the actual
data from the CD is "raw" whereas a .wav file is not.
As Dick Pierce said, the .wav file is not "raw" but has a header
with sample rate, number of channels, number of bytes per sample, file
length and such. This can be checked for "reasonable" values and the
claimed length against the actual file length, things like that.

>In principle, you could write a program that opened and read the WAV file,
>looking for such things as excessively long all-zero or full-scale sequences, or
>abrupt jumps in sample values.

This is a way to discriminate in the .wav data or a raw file
whether the content is "musical" or not, but may not be foolproof.
All-zero sequences might last for over four and a half minutes. <g>
An LP declicking algorithm would find abrupt jumps with no trouble.

So I noticed Tuesday.  The last time I listened to it before then was so long
ago that I hadn't noticed the change.

The ionosphere is stratified, or in other words, has layers. It's the E-layer which, in the course of the day, charged by sunshine, actually absorbs medium wave frequencies...it's only when the wavelengths are shorter (shortwave) where the E-layer reflects for daytime skywave propagation. The E-layer, when particularly dense like during solar maxima, will even reflect VHF frequencies (normally it passes them day and night). When that happens you'll hear old radio people call it "sporadic-E", since it's so, well, sporadic in nature - there's really no predicting when it will happen. But when it does, you'll sometimes find FM stations from 1000 and more miles away coming in on a car radio, so strong sometimes that it'll blow over a local station which has only direct line-of-sight propagation to get to the same receiver.

At night, without the sun to ionize the gases there, the E-layer "evaporates", and then the F-layer comes into play. The F-layer reflects medium wave frequencies pretty well, except when they're disturbed by a solar flare or other phenomena. The F-layer actually has two parts (F-1 and F-2, naturally enough). A shortwave station which will skip 1000 miles during the day will skip twice that or more at night, since the F-2-layer is higher and is more in play during the night.

>>
Radio waves radiate more or less in all directions from an AM tower, meaning
that some of them radiate skyward.
>>

An ideal non-directional radiator which is 180 degrees or shorter has no radiation at 90 degrees to the horizontal plane.

The taller a radiator is, over 180 degrees and up to 225 degrees, the higher the radiation is in the horizontal plane, and the less the radiation is in the vertical plane except for 90 degrees, where the radiation increases above 180 degrees to reach a maximum at 360 degrees.

A 360 degree radiator which is center fed and has the base grounded through a capacitance is called a Franklin, and is the most efficient radiator known. This is essentially two colocated 180 degree radiators.

Sid Schweiger (sids1045@aol.comnospam) writes:
>
>>What is a clear channel station?<
>
> It's now an obsolete term, but "clear channels" were AM frequencies with only one station on them.  What are now referred to as "clear channel" stations (not to be confused with Clear Channel Communications, the group station owner) are for the most part the 50-kW AM stations using non-directional antennas, many of which have been around since AM radio's early days of the 1920's.

Also known as single stick stations, as their antennas use only a single tower and radiate omnidirectionally.

Wanted:

Hey, for a change the "Radio Crazy" has a post that has nothing to do with broadcasting! HI!

Seeking to buy a very rare version of the famous WW II ARC-5 "command" transmitter.

I need the 1.3 to 2.1 Mhz version and will pay $200.00 plus shipping, no questions asked!

Only the following mods. are acceptable: (Any or all, silly!)

a-Heaters rewired for 12.6 volts.
b-RF output connector changed to BNC or UHF.
c-Rear power socket changed to octal female or male.
d-Cathodes of 1625 finals brought out (To a jack or whatever)

No dents or obvious signs of physical abuse. Normal wear and tear of paint is okay.

Must have all tubes and the calibration crystal.

Tel: (478)741-1710 in Macon, GA.

73,

Meyer Gottesman, W6GIV
aka "The Radio Crazy"

I'm finally getting around to drafting a charter for the newsgroup and Digest. I occasionally get questions about what's appropriate to post here, and I believe a charter would be quite useful.

So I'm trying to decide what should be on-topic; and I want to include everything we talk about. I'm also looking for a one-line definition of what the group is about (heh, that oughtta be fun.)

So far, my on-topic list is:

*Discussion of broadcast technology
*Discussion of the radio industry
*For-sale or for-auction posts selling broadcast equipment

*For-sale or for-auction posts selling radio memorabilia
*For-sale or for-auction posts selling radio stations

*Periodic announcements of Internet broadcasts. Could be one-liners or more detailed posts like the ones we see from WCBN.

What should I add? And do y'all think we should include other stuff like shortwave and ham discussions in the on-topic list, or should we stick to the traditional AM and FM bands? (I do already post periodic newsletters from Amateur Radio Newsline.)

Discussion welcome in e-mail, but preferred here in the newsgroup/mailing list.

Doesn't rrb already have a charter?

[ Moderator's Note: Bill Pfeiffer may have had one at some time, but I've never seen it. To get the newsgroup accepted into rec.* which is part of Usenet's Big 8 hierarchy, it would have had to have a charter - if anyone can point me to one, I'd be happy to grab it. ]

Love this newsgroup but don't see a need for the playlists we sometimes see
posted.
Otherwise, the on-topic list looks great.

I'd suggest looking over the (actual or de facto) charter
for the rec.antiques.radio+phono group, and making our charter
exclude antique consumer radio equipment.

I'm looking for a So.Cal company that does Hard Sets, preferably premade
that will accommodate three 9x12 screens.   There used to be a place
called Creative or something like that in LA, but I can't find them in
the book.  Any help is much appreciated.

I found the following post in Google's Usenet archive. It wasn't very hard to find. It was posted on may 1, 1992 to the group news.groups, and it announces the successful vote for the creation of r.r.b.

Newsgroups:
news.announce.newgroups,news.groups,rec.radio.noncomm,rec.radio.shortwave,rec.radio.amateur.misc
From: wdp@gagme.chi.il.us (Bill Pfeiffer)
Subject: RESULT: rec.radio.broadcasting passes 234: 34
Message-ID: <1992May1.194903.16241@uunet.uu.net>
Followup-To: news.groups
Sender: tale@uunet.uu.net (David C Lawrence)
Organization: Gagme Public Access UNIX, Chicago, Illinois.
Date: Fri, 1 May 1992 19:49:03 GMT
Approved: tale@uunet.uu.net
Lines: 350

Voting on the proposed creation of rec.radio.broadcasting has ended as of 4/30/92. The proposal received 234 yes votes to 34 no votes, thus satisfying the Usenet criteria of both a 2/3 majority and 100 more yes votes than no votes, required for the creation of this forum.

There were a few duplicate yes votes, which have been removed, no switched votes, and a couple of no votes which did not strictly comply with the voting guidelines, but were included anyway since intent seemed clear.

CHARTER:  Rec.radio broadcasting is intended as a worldwide forum dedicated to discussion of subjects pertaining to 'domestic' radio broadcasting.  By the term 'domestic', we mean radio which is intended basically for reception within the country from which it originates. In other words any and all broadcasting which is not primarily intended for reception in other countries/continents.

Valid subjects might include (but not be limited to) ...

* Technical and engineering matters
* Programming and formats  (such as.. but not limited to..)
    * Music and entertainment
    * News & talk shows
    * Political coverage
    * Specialized formats
* Legislation and regulations affecting the medium
* Technologies affecting the medium
* Ideas for improving radio broadcasting
* Differences and similatrities between nation's broadcast services
* Low-power radio broadcasting
* Community broadcast radio
* Pirate broadcasting
* Broadcast DX
* Radio's historical & cultural significance
* Information exchanges for those seeking employment in radio.
* Shop talk, gabfesting and general communications between broadcast professionals, hopefuls and listeners across the globe!

About the only traffic which is NOT welcome on this group is..

# Flames and endless arguments over personal tastes in music/programming.
# Unwarranted and excessive profanity and/or personal attacks.
# Articles not pertaining to radio broadcasting. (*)
# Articles about two-way, cellular, or other non-broadcast radio services, unless they directly relate TO broadcasting. (*)

(*) - except matters of urgency to computer users, the public at-large, or other matters of great impact or importance.

While this WILL be a moderated forum, I will restate that I believe in minimal moderation and _NO_ censorhip!  This means I will not kill any incoming articles because they clash with some personal opinion or belief.  In other words, the ONLY reasons that an article might be

killed
is if it falls into one of the above categories, or if it is one of
many identical responses to a posters question.  In the latter
case, I would post a few of the identical responses and e-mail the
remainder
to the poster requesting the information, giving a credit line to those
who
posted, but were not printed.  This is done to conserve net bandwidth.

So, without further adieu, here are the votes which came in over the
past
month starting with the YES votes:

[LIST OF VOTERS SNIPPED]

After the 5 day waiting period, baring and 'serious' objection,
rec.radio.broadcasting should be newgrouped and appear at your site.

If your site does not carry rec.* groups, contact me for information
on direct posting, and possible e-mail distribution.

My e-mail address is  wdp@airwaves.chi.il.us (William Pfeiffer)

Thanks to all who participated.

William

If Mel Karmizan finds out that ANYONE is streaming ANY of that show, they
will either stop streaming the show or stop carrying it at all.

It's against Viacom policy.

Who wants to listen to those crappy stations?

XM and Sirius are both launching traffic reports next month.

I am in the media. No one has ever questioned the appropriateness of me having a mobile receiver. In fact, I can easily justify it with any peace officer by telling the story of a deputy who bled to death when his gun went off by accident and he severed a leg artery. His partner did not know the groin pressure point and the man bled to death.

Had a scanner user with first aid training been nearby that deputy would still be alive.

I've been biting my lip for years about the posting of the WCBN playlists and ARRL scripts.

Now seems like a good time to suggest that these posts stop appearing on Airwaves. If the posters want to share the info, a URL to an independent site would be the courteous and appropriate method to do it.

WRT the rec.x issue, isn't Airwaves still parallel to rec.radio.broadcast? I knew it at least used to be, when Bill was still with us, but then I get the digest and haven't actually looked at usenet in years.

Thanks to all who have kept Bill's efforts alive. Can't believe it's been over four years since he's been gone.

I think such laws are stupid. However, they were lobbied for by law enforcement who believed criminals were tracking their movements and knew when they were about to arrive. They were also concerend that the media would monitor and interfere with their operation or expose something that shouldn't happen.

A "peace officer" doesn't make the rules. If he sees a receiver capable of receiving police and fire frequencies, he's supposed to take action in those states that forbid scanners in cars. The same is true for states that ban radar detectors.

With the no-code ham license an exemption is easy to get. Just show the cop your license and you're free to go. The next time a cop shoots himself, you'll be there to help.

There was a case in Cranford, NJ where a ham offered to help the police track down someone who was causing malicious interference to public safety services. They ended up charging him with doing it in spite of the fact that it continued while he was in custody. Charges were dropped after the ARRL assigned a lawyer (John Norton) to represent him.

In my experience in the NY/NJ area it's been the "peace officer" who is most against scanners. I wouldn't appeal to his "save my comrade" sensibilities.

Rich

Nowadays cops use digital cellphones if they want to be secure from the press.

I've never heard of anybody around here getting busted for having a scanner. That sounds like crazy talk.

XM satellite radio has just announced that the MSNBC feed will be joining its lineup on Feb. 1. Viacom has shut out satellite radio as well as the Internet so far. Will XM have to find filler programming (or MSNBC feed filler to XM) for the hours Imus airs on MSNBC?

The Radio Crazy ......it is baaaaaaak!!!! HI!

For sale: Partial ownership of nice AM radio station in Roseburg, Oregon. KRNR. (Do not dare contact directly!)

1 KW, fulltime, 1490 KHz. On the air since 1935. Oldest station in the country. Roseburg is a city of about 20,000 population and at least 80,000 people reside in the daytime (.5 mv/meter) coverage area.

They are asking only $100,000 for the station WITHOUT the real estate. We'd be expected to vacate in one year and find new studio and tower site. I already have a new tower site approved.

The station grossed an incredible $263,000 or so in 1999 and did almost 1/4 million in 2002.

Joint venture: Active or inactive investors with at least $10,000 each are welcome. The first investor ONLY may invest as little as $5,000. All investors would be on the board with full voting rights if desired. No investor (including me!) may own over 49 percent.

Please! No "AM bashers" or other negative nabobs. Flamers will be sprayed with a fire extinguisher to "put out the flames"!!! Hi!

Tel: (478)741-1710 in Macon, GA

I am NOT a broker, agent, shill, owner or part owner. I also am NOT a crook.

For sale:

Partial ownership of AM station in upstate NY. Small and nice college town. Near Albany.

Daytimer, 1 KW, non-directional. PSA and 20 watts nights.

Tower land included with 192 ft. tower and shelter plus two transmitters.

Studios rented at $350.00/month with three years remaining on lease.

At $120,000 asking price this is a "fire sale"!!!

(The "Radio Crazy" is baaaaaaaaaaaaak!)

Joint venture. Active or inactive investors with at least $10,000 each are welcome. All investors would be on the board with full voting rights if desired. No individual can own more than 49 percent. This means me!

Please! No "AM bashers" or other negative nabobs.

I am NOT a broker, agent, shill, owner or part owner.
It goes without saying that I am not a crook.

Check with the ARRL. They'll quote you all the cities and states where the police wanted scanners and VHF and UHF ham radios banned in vehicles. Just because no one has been busted doesn't mean the laws aren't on the books.

I agree it's crazy talk, but from the police.

The New Jersey scanner law:

397. EQUIPPING MOTOR VEHICLES WITH RADIO RECEIVING SETS CAPABLE OF RECEIVING SIGNALS ON THE FREQUENCIES ALLOCATED FOR POLICE USE.

A person, not a police officer or peace officer, acting pursuant to his special duties, who equips a motor vehicle with a radio receiving set capable of receiving signals on the frequencies allocated for police use or knowingly uses a motor vehicle so equipped or who in any way knowingly interferes with the transmission of radio messages by the police without having first secured a permit to do so from the person authorized to issue such a permit by the local governing body or board of the city, town or village in which such person resides, or where such person resides outside of a city, or village in a county having a county police department by the board of supervisors of such county, is guilty of a misdemeanor, punishable by a fine not exceeding one thousand dollars, or imprisonment not exceeding six months, or both. Nothing in this section contained shall be construed to apply to any person who holds a valid amateur radio operator's license issued by the federal communications commission and who operates a duly licensed portable mobile transmitter and in connection therewith a receiver or receiving set on frequencies exclusively allocated by the federal communications commission to duly licensed radio amateurs.

Crazy talk, all right, but legal crazy talk.

Rich

The MSNBC feed has been an exception right along, because technically, it's not the Westwood One feed.

In fact, you can get it now in Windows Media, if you know where to look. MSNBC doesn't publicize the stream.

I have a correction. The scanner law I posted was not New Jersey. It was New York State. Here's another from Florida;

FLORIDA STATUTES (1995) -
Title 46, CRIMES; Ch. 843, OBSTRUCTING JUSTICE; � 843.16

--------------------------------------------------------------------------------

843.16 Unlawful to install radio equipment using assigned frequency of state or law enforcement officers; definitions; exceptions; penalties

(1) No person, firm, or corporation shall install in any motor vehicle or business establishment, except an emergency vehicle or crime watch vehicle as herein defined or a place established by munincipal, county, state, or federal authority for governmental purposes, any frequency modulation radio receiving equipment so adjusted or tuned as to receive messages or signals on frequencies assigned by the Federal Communications Commission to police or law enforcement officers of any city or county of the state or to the state or any of its agencies. Provided, nothing herein shall be construed to affect any radio station licensed by the Federal communications Commission or to affect any recognized newspaper or

news publication engaged in covering the news on a full-time basis or any alarm system contractor certified pursuant to Part II of Chapter 489, Operating a Central Monitoring System.

(2) As used in this section, the term:

(a) "Emergency vehicle" shall specifically mean:

1. Any motor vehicle used by any law enforcement officer or employee of any city, any county, the state, the Federal Bureau of Investigation, or the Armed Forces of the United States while on official business;

2. Any fire department vehicle of any city or county of the state or any state fire department vehicle;

3. Any motor vehicle designated as an emergency vehicle by the Department of Highway Safety and Motor Vehicles when said vehicle is to be assigned the use of frequencies assigned to the state;

4. Any motor vehicle designated as an emergency vehicle by the sheriff of any county in the state when said vehicle is to be assigned the use of frequencies assigned to the said county

5. Any motor vehicle designated as an emergency vehicle by the chief of police of any city in the state when said vehicle is to be assigned the use of frequencies assigned to the said city.

(b) "Crime watch vehicle" means any motor vehicle used by any person participating in a citizen crime watch or neighborhood watch program when such program and use are approved in writing by the appropriate sheriff or chief of police where the vehicle will be used and the vehicle is assigned the use of frequencies assigned to the county or city. Such approval shall be renewed annually.

(3) This section shall not apply to any holder of a valid amateur radio operator or station license issued by the Federal Communications Commission or to any recognized newspaper or news publication engaged in covering the news on a full-time basis or any alarm system contractor certified pursuant to Part II of Chapter 489, Operating a Central Monitoring System.

(4) Any person, firm, or corporation violating any of the provisions of this section shall be deemed guilty of a misdemeanor of the second degree, punishable as provided in s. 775.082 or s. 775.083.

I think it began with "Red Ink" Reagan.  As for how it's done,
they probably use a microphone and a script.  I suspect the
scripts that The Fraud reads are written phonetically.

# Amateur Radio Newsline™ Report 1378 – January 9, 2004

Amateur Radio Newsline report number 1378 with a release date of Friday, January 9, 2004 to follow in 5-4-3-2-1.

The following is a Q-S-T. V-K hams celebrate a new ham radio, some new Amateur Radio problems in Nepal, and Canadian hams learn that they may loose 220 to 22 MHz. All this and the latest in the war against B-P-L on Amateur Radio Newsline report number 1378 coming your way right now.

(Billboard Cart Here)

**

## RESTRUCTURING: NO-CODE COMES TO VK-LAND

Major changes to ham radio in Australia were celebrated on the air on New Years Day. Q-News Graham Kemp, VK4BB, listened in and tells us what he heard:

--

When 1 January 2004 arrived, so to did a new era for Amateur Radio operators around Australia. At one minute past midnight, amidst the fireworks across Australia, Amateur Radio short wave frequencies lit up, too, as they celebrated the removal of a requirement for Morse Code qualification by getting on air in unprecedented numbers.

A quick scan through the 80 meter band during the first hour of the QSO party showed that there was standing room only with stations of all license levels participating eagerly in the party with some limited and novice limited stations handling high amounts of static and nearby station noise with considerable skill .

All states and territories activated special radio stations for the event. There were plenty of Wireless Institute of Australia stations on the air to help with the bonus contacts with VK5WI, VK6WIA, VK2WI, VK4WIG, VK4WIA and VK4WIT heard during the quick scan around 80 meters.

In the act, the Wireless Institute of Australia's club station VK1WI was activated from the home of their President, Alan Hawes.  Way up north long time WIA supporter John Stevens took to the airwaves from the Townsville region.

As the morning wore on the stations operating were fewer but still at a level that veteran operators say rival the heydays of HF operating when Novice licensees were first able to access the HF bands.

>From Q-News Australia, I’m Graham Kemp, VK4BB, reporting for the Amateur Radio Newsline.

--

Still more changes to ham radio down-under is expected in the coming months. (Q-News)

**

RESTRUCTURING:  NEW BANDS AND NO-CODE TO CROATIA

Croatia has become the first country in Region 1 to benefit from the expansion of the 40 metre band agreed at the World Radio Conference in Switzerland last summer. 9A amateurs have also been given privileges at 70 and 3,400 Mhz.

New amateur radio regulations came into effect in Croatia on the 26th of December. Since then, amateurs there may operate between 7,100 and 7,200 kHz on a Secondary basis, with a maximum power of 1,000 watts PEP, in addition to the normal Region 1 allocation of 7,000 to 7,100 kHz. On 4 metres, Croatian amateurs now have 70.000 to 70.450 MHz, with a power limit of 10 watts. They also gain a new band between 3,400 and 3,410 MHz, with a maximum permitted power of 150 watts.

The Morse code requirement for an HF bands licence was also dropped with the new regulations and there are now only two licence classes there: the full licence and a beginners' licence.

I’m Jeramy Boot, G4NJH, in Nottingham England.  (GB2RS)

**

RADIO POLITICS: HAM RADIO IN NEPAL

Some bad news about ham radio in Nepal.  Charles Harpole, K4VUD, says that his efforts, along with those of 9N1AA, to expand ham radio in that nation and to establish a memorial club station for the late Father Marshall Moran, 9N1MM, are on an indefinite hold.  This,  due to the disturbed social and political conditions there.

Harpole says that all radios and other gear that was donated some years ago have been distributed to the currently licensed native 9 N hams.  Harpole says that  the gear will come back to a club station someday.  Harpole asks that everyone bear with this situation and extend understanding.  (OPDX)

**

SPECTRUM REALLOCATION: 220 - 222MHZ ON THE BLOCK IN CANADA

Canadian Amateurs may lose part of the 220 to 222 MHz in the 1 point 3 meter band. band. Thats the recommendation being made by the Radio Advisory Board of Canada to Industry Canada following an 18 month survey. Rick Johnson, KA9VZD, is in Antioch, Illinois, with more:

--

In a move reminiscent of the situation in the United Sates back in 1991, the 220 to 222 MHz band would be transferred away from Canada’s Amateur Radio operators and given to that nations Mobile Radio service. That’s the bad part. Here’s the good news. The Radio Advisory Board of Canada has recommended that Amateur repeaters in this portion of the band be grandfathered to continue operation for a number of years. That time period would be decided by Industry Canada which is Canada’s radio and telecommunications regulator.

The Radio Advisory Board also recommended allocating 219 to 220 MHz to amateurs in Canada on a secondary, non-interfering basis. This says the R-A-B-C would put the band in agreement with a similar allocation now available to radio amateurs in the United States.

But here is where the Radio Advisory Board of Canada begins to think outside the proverbial box. While most administrations seems to frown on the idea of hams and non-hams sharing spectrum and talking with one another in a common allocation, Canada has other ideas.

The Radio Advisory Board wants a 150 kHz wide parcel in the reallocated band be designated as “Public Service Spectrum.” A small band to be shared by Canadian Amateur Radio operators and Canadian Mobile Services for special public safety and disaster communications applications. In other words, Canadian hams could talk with their non ham counterparts -- and vice versa -- in a disaster scenario.

Radio Amateurs of Canada, as a member of the Radio Advisory Board of Canada, has opposed any changes to the 220 to 222 MHz spectrum. Unfortunately, so far with very little success.

For the Amateur Radio Newsline, I’m Rick Johnson, KA9VZD, reporting.

--

Industry Canada must now take this advice and decide what it will do with 220 to 222 Mhz, and how soon. The full story is on the web at http://www.rac.ca/news/canada.htm (RAC)

THE BPL FIGHT: BPL INTERFERENCE PROVEN TWO-WAY

Two organizations have filed comments with the FCC that augment previously expressed worries about potential interference from and to Broadband over Power Line systems. One of them shows that service providers could loose a lot of income if anyone operates even a low power radio near a B-P-L transmission line. Amateur Radio Newsline's Bruce Tennant, K6PZW, reports:

--

Picking up on the what it terms as grave concerns expressed by the Federal Emergency Management Agency over implementation of B-P-L on December 4, the nonprofit Disaster Preparedness and Emergency Response Association has called on the FCC to require impartial B-P-L field testing as well as additional public comment and full and open public hearings.

The ARRL Letter says that in comments to the FCC the Disaster Preparedness organization concluded that serious interference to and disruption of critical emergency communications systems in several licensed services throughout North America would almost certainly result from BPL implementation as currently proposed.

Endorsing earlier FEMA remarks, the group said that proposed B-P-L systems don't just pose a risk of interference. Rather, they have already been shown to actually cause harmful interference to licensed radio services.

Meanwhile, the Amateur Radio Research and Development Corporation has filed additional test data with the FCC. This, to support preliminary findings suggesting that BPL systems are susceptible to interference from even modest Amateur Radio HF signals. AMRAD said its newest data demonstrated that amateur operation in the test neighborhood would cause many homes to lose their Internet connectivity.

For its RF susceptibility experiment, AMRAD used the Potomac Electric Power Company system test site. It features a mid-1960s vintage home with unshielded interior electrical wiring and overhead power lines.

AMRAD's tests found that at a distance of just over one-half mile, data transfer ceased in the face of a signal from a mobile 100 watt transmitter on 3 point 980 MHz. When sited adjacent to the test property, AMRAD said data transfer went away in all but one instance at a transmitter power of just 4 watts operating in the proposed Broadband Over Powerline spectrum.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

What AMRAD has now done is to prove that interference with B-P-L will be a two way problem.  More so for data providers who won't see much profit if something as simple as a 5 watt C-B radio can shut down a neighborhoods B-P-L operations.  (ARRL)

**

## THE BPL FIGHT:  TAMPA TRIBUNE PRESENTS BOTH SIDES

An excellent article that details both sides of the B-P-L controversy appeared in the January 5th edition of the Tampa Tribune.  In it, reporter Will Rodgers provides not only the industry side of the issue, but the ham radio side as well.  The article can be read on-line at the cyberspace address in this weeks printed Amateur Radio Newsline report.  You can read the article on-line at www.tampatrib.com/Business/mgalzo1pd.html  (Via e-mail)

**

## WITH THE FCC:  CHAIRMAN POWELL PROMOTES A FREE MARKET TELECOM REVOLUTION

The chairman of the FCC is sending out a message that the migration to digital telecommunications will not falter.  Michael Powell says that entrenched service providers such as telephone companies and cable television providers can either join the party or suffer the consequences.

In a December 29th interview with reporters and editors from the San Jose Mercury News, Michael Powell shared a number of personal views.  At one point he stated the current migration to digital is really a simple thesis.  One that says for the past 100 years we've had one kind of communications system.  That being a system that’s both analog and narrow band.  And while it's the greatest machine ever built by mankind, it's also extremely mature, and it's really, in Powell’s view, at the end of its innovation life.

Perhaps Powell’s most controversial statement came in regard to companies that are not eager to invest in the digital revolution.  He said -- quote:  "I have no problem if a big and venerable company no longer exists tomorrow, as long as that value is transferred somewhere else in the economy."

You can read more of what FCC Chairman Powell had to say at www.siliconvalley.com/mld/siliconvalley/7591252.htm  (CGC)

**

## RADIO LAW:  FCC STILL NOT “NAMING NAMES” IN ENFORCEMENT ISSUES

The FCC’s decision to no longer identify those hams allegedly violating the Part 97 Amateur Rules continues into the new year.  The agency’s Daryl Duckworth, N-N-Zero-W, has the latest word:

--

Duckworth: “The FCC, at least temporarilly, has revised the format in which it is supplying information on Amateur Radio enforcement actions.  The new format provides only the state and city with a synopsys of the action taken, without naming any indiciduals.

Pursuant to privacy concerns, the FCC currently is reviewing its proceedures in its radio services regasrding the release of information about individuals. Following this review, the FCC will determine its privacy policy for the future. “

--

As we go to air there is still no word as to when the revirew of privacy proceedures at the FCC will be completed.  Its been about two months since the ban on relesing names was put in place.  (FCC)

**

COMMUNICATIONS LAW:  NORWEGIAN COURT SAYS COPYING DVD’S NOT PIRACY

An appeals court in Oslo Norway has dealt a major blow to those trying to protect the intellectual copyright of material that they own from unauthorized duplication.  This, after it upholds the acquittal of a 20-year-old Norwegian man who posted a program on the Internet for cracking DVD security codes.

Prosecutors had appealed a lower court decision after Jon Lech Johansen was acquitted last  January of violating Norway's data break-in laws with his DeCSS program for DVDs.  The prosecution had sought a 90-day suspended jail sentence, confiscation of computer equipment and a $2,940 fine.  But  the judge ruled that Johansen could freely copy DVDs he bought, adding he didn't violate the Nordic country's laws protecting intellectual property.

The case was widely seen as a test of Norway's computer protection laws. Prosecutors said they were considering appealing to the country's supreme court. In the meantime, the decision is being viewed as a major setback for anti-piracy proponents in the entertainment industry, worldwide.  (Published news reports)

**

RADIO HONORS:  GARC HONORS MEMORY OF KU3Z

The Goddard Spaceflight Center Amateur Radio Club in Greenbelt Maryland has honored one of its own.  By a unanimous vote at the clubs Christmas party, the "WA3NAN Space Shuttle Retransmission Facility" has ben renamed the "Joe Grzesik KU3Z Memorial Space Shuttle and I-S-S Retransmission Facility." This, in honor of Grzesik’s outstanding support of relaying of space shuttle and International Space Station ham radio communications on the terrestrial Amateur bands for over two decades. Joe Grzesik KU3Z became a Silent Key in 2003. (N8PK vis the WA3NAN News Exchange)

**

HAM RADIO HONORS:  SELECTING THE TOP 5 QSL MANAGER SURVEY

John Shelton, K1XN, Editor of the Go List says that it’s time again for his newsletters’ annual “Top 5 QSL Manager” survey. This is is a process by which DX’ers get to choose those that they consider to be the best QSL Managers with whom they have had dealings with in the past 12 months. Its also a way to provide at least a small “thank-you” to the work performed by these and other QSL Managers around the world.

The results of this survey will be given to Carl Smith, N4AA, for inclusion in the QRZ-DX bulletin and also announced on the GO LIST Reflector by mid February. To vote, send your list of those who you are the five best 5 of 2003 by e-mail to golist@golist.net before February 1st. Again, that address is golist@golist.net. (OPDX)

**

HAMFESTS: WINTERFEST IN VA. IN FEB.

Turning to the ham radio social calendar, the 28th annual Winterfest sponsored by the Vienna Wireless Society is slated for Sunday, February 29th. The gathering will take place at Northern Virginia Community College in Annandale, Virginia. And if you're ready to take the test, an Examination Team will be on hand Saturday, February 28th. More information is on the web at www.viennawireless.org (KG4OJT)

**

MEETINGS AND CONFERENCES: AMSAT-NA IN FL IN FEBRUARY

And the next meeting of the Board of Directors of AMSAT-NA will take place at the Orlando Airport Clarion Hotel on Saturday, February 21 and Sunday, February 22nd. Starting at 8.30 am on Saturday, the meeting will be open to all AMSAT North America members wanting to take part.

Among the items to be discussed will be to develop the AMSAT North America Strategic Plan while considering current governing factors. AMSAT members wishing to attend and make a presentation to the Board should advise President Robin Haighton, VE3FRH by February 15th. Let him know the topic and the length of time needed to present. His e-mail is ve3frh@amsat.org (AMSAT-NA)

**

BREAK 2

This is ham radio news for today’s radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

## EMERGING TECHNOLOGY:  SIREN SENSOR TEST IN L.A.

On the technology front, the Los Angeles Fire Department has been asked to study the possibility of equipping engines with a device to turn traffic lights green.  This, so vehicles responding to emergencies don't have to stop at intersections.   Bill Pasternak, WA6ITF, is in our Los Angeles studio with more:

--

Los Angeles City Councilman Tom LaBonge has asked the Fire Department to work with the City's Department of Transportation to start a pilot program using technology such as SirenSensor.  This is an acoustically activated device that can differentiate emergency sirens from ambient noise and then warn the civilian driver of the approach of an emergency vehicle.  It does this by shutting of a near-by car's audio system or radio and activating both audible and visual signals.  The councilman believes that this technology can help police and firefighters respond to emergencies with greater speed.

For the Amateur Radio Newsline, Bill Pasternak, WA6ITF, in the City of Angels.

--

No word when the tests of this remote control system might begin.  More about SirenSensor is on the web at http://www.findarticles.com/cf_dls/m4PRN/1998_Nov_13/53213508/p1/article.jhtml (LA News)

## NEW PRODUCTS:  NEW QUICK-CHARGE NiMH BATTERIES

Turning to the latest in electronic products of interest to hams, we have this from battery maker Rayovac. That company has announced a new charger that it says is capable of fully restoring a specially designed Nickel Metal Hydride cell in only 15 minutes.  Dubbed the  I-C3, the  new rechargeable cells and charging system uses Rayovac's In-Cell Charge Control technology that puts the control of recharging into the battery instead of the charger. The company says that doing this offers significant performance and convenience advantages over existing rechargeable and disposable battery systems. More information is on-line at www.rayovac.com (Rayovac)

**

NEW PRODUCTS: INTEL IN YOUR TV

And the world's largest microchip maker will soon unveil plans to make integrated circuits for use in digital television receivers. Santa Clara, California based Intel is exploring a technology called liquid crystal on silicon which is a hybrid between the more expensive silicon microchips and liquid crystal displays. This could significantly lower the cost of flat panel high definition displays. Industry analysts say that if this technology is successful it would pose a serious threat to established consumer electronics chip makers in Europe and Japan, such as Philips and Sony Corp., as well as emerging players like Texas Instruments. (Intel)

DX

In D-X, keep an ear open for members of a French radio club who will be on the air from Togo. This as the F6KOP Le Radio Club de Provins 77 announce that they plan to be active from Grid Square JJ06 as 5V7C from March 6th to the 12th. More information is on-line at http://5v7c.free.fr/defaulteng.htm (OPDX)

And OPDX reports that S57CQ, is now active from Bhutan as A52CQ and is expected to stay there through January 14th. Activity is expected to be on all bands as much as possible. QSL via S57DX. (OPDX)

**

THAT FINAL ITEM: THAT FINAL ITEM: ARDF

Lastly, some hams have learned the secret of enjoying the hobby while staying physically fit. They're the fans of on-foot transmitter hunting, also called radio-orienteering and ARDF. Reporter Joe Moell, K0OV, has the story of a California ham who is rapidly becoming one of the best.

--

I've told you about the many direction-finding medals that have been won by Jay Thompson W6JAY, Newsline's Young Ham of the Year. But you don't have to be Jay's age to be a big winner at international on-foot transmitter hunts. 61-year-old Bob Cooley KF6VSE of Pleasanton, California has just brought home a couple of gold medals from the IARU Region 3 Championships in Australia.

The competitions began November 28 near Ballarat, a historic gold mining town in northwestern Victoria province. They were hosted by the Wireless Institute of Australia and organized by the Victorian ARDF Group.

Cooley competed in M60, the Superveteran Category for men age 60 and above. On the 4.7-kilometer two-meter course, he found his required three fox transmitters in 1:30:25, seven minutes ahead of the second-place finisher. Then on the 5.6-kilometer 80-meter course, he did even better, finding all three foxes and getting to the finish line in 1:15:22.

All three IARU Regions hold championships in odd-numbered years. These events for Region 3, encompassing Asia and Oceania, drew 50 male and 9 female competitors from Australia, China, Japan, Korea, and New Zealand. KF6VSE was the only guest from North America.

A long-time competitor at non-radio type orienteering events, Bob has improved greatly since he discovered ARDF in 1999. He finished among the top ten in his age and gender category at the 2000 ARDF World Championships near Nanjing, China. This past summer, he won gold medals on both bands at the 2003 USA ARDF Championships near Cincinnati.

You can get a link to the complete results from Australia and learn more about world-class transmitter hunting on the Web at www.homingin.com. There you will also find the details on the upcoming USA ARDF Championships, which will take place in California next June. That's homingin -- one word -- homingin.com

>From southern California, where we do transmitter hunting every month of the year, this is Joe Moell K-zero-Oscar-Victor, reporting for Newsline.

--

Again Joe’s website is www.homingin.com (K0OV, ARNewsline(tm))

Hello - just to let you know that 6 new songs are on my site for your
evaluation.  There were all produced in 96khz quality at Axis Studios
in Geneva: if you are interested, I can send you the cd for
broadcasting.
Enjoy!

one of my favorites, Stan Major, is back on national radio with a morning drive talk show.  I used to listen to Stan's overnight show for years...driving across the country late a night.  Glad to find him again!
I think it's National Radio Net out of Boston.

Yeah.  I'm aware that such laws exist.  But wouldn't you get laughed
off the force for busting somebody for having a radio?

I can see where it might be an aggravating circumstance attendant to a
serious crime.

WCBN WILL DESTROY YOUR FEEBLE FORMATS

WCBN - 30 Years of Freeing Your Mind - Listen to us online!

WCBN is the University of Michigan student-run community freeform radio station in Ann Arbor, Michigan. We broadcast at 200 watts to the University and its surrounding communities from the basement of the Student Activities Building in downtown treetown.  We have been broadcasting a genre-less overview of music, news, and public affairs for 30 years.

WCBN's musical format is freeform, with some specialty shows. Freeform involves all different kinds of music, including jazz, reggae, blues, hip-hop, country, rock, and just about everything else under the sun. Instead of telling our DJs what to play, we allow them to select their own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an intelligent fashion, and show links between musical genres.

Click here to listen to our live WCBN-FM Ann Arbor broadcast!

20. Mark Lemhouse - Big Lonesome Radio - Yellow Dog

Listen to blues on WBFO-12 hours each weekend!

Saturday
11 to 4 p.m. and 10 p.m. to 12 midnight
Sunday
11 to 4 p.m.

Blues:
Join WBFO for 12 hours of Blues each weekend.
Check in with your Blues Trio -
Jim Santella, Sat. & Sun. 11 a.m.
Kim Buckner, Sat. 3 p.m.
Debbi Sims, Sat. night 10p.m.

This is a list of blues CDs played on WBFO and reported
to the magazines "Living Blues" and "BLUES BEAT."
The list of CDs represents the recent releases WBFO has in
regular rotation. It does not represent the only music WBFO plays.
These CDs are only representative of recent releases; and the
list acts as a guide to listeners and music fans who
would like to learn more about the artists and labels releasing
blues music.

Check out the headers. In the the "Approved:" fields, where "Sure, why not?" usually appears, the spammer's (fake) e-mail address appears instead. And in the memo fields, you'll find "Posted through an open NNTP server with a throwaway e-mail account. Resistance is futile."

If this spammer has, as it appears, found a way to crack into moderated groups, this is kind of scary..

Howard

>> MSNBC doesn't publicize the stream.
>>
> So tell us.  Where do you look?

At the moment, the MSNBC audio stream is at
<http://www.msnbc.com/news/asx/audio/28/MSNBC_ie5radio.asx>.

It's playing as I post this. though it seems to be skipping at the moment.

I doubt that it's carefully monitored, as I can't find a link to it on the current MSNBC web site, so there's no need for them to pay particular attention to the quality of the stream.

I wouldn't be surprised, if the server gets overused, to see it be shut off.

Used to be, we would call the White House Actuality Line every afternoon on the phone, and tape whatever nice sound bites were available that day for broadcast, also. I think that got shut down when Clinton

came into office, and I kind of miss it.  I do remember it being available
for Bush I.

Our news guys were slowly patching together various Reagan newsbites into
a very amusing splice job.

Incidentally you may notice the guy hit a bunch of rec. groups. I'm told by
a friend who runs a news server who had the post in his spool that he used

X-No-Archive so the RRB post wouldn't show up on Google. I didn't see it here;
Giganews must have filtered it as spam.

Not really. This hole has existed since the beginning of Usenet.

The clarity of local AM radio stations is less at night.  Is there some sort of law that radio stations have to cut their output when it gets dark?  I've noticed that it's the amount of light outside, not the time of day.  That is, the lack of clarity occurs whenever it gets dark, not at a certain time each day.  I always presumed the stations were cutting power to save money, but then why would it be based on light vs dark, rather than on time of day?

Absolutely nothing. There are a group of people who specialize in
sending such tripe to as many UseNet newsgroups as possible --
possibly just for the disruption value, possibly to send covert
messages, possibly for other reasons. The first has become known
as "HipCrime" (or "DipSlime"), and his followers are generally known
as Hipclones.

"Matt Beckwith" <beckwith@wchsys.org> wrote in message
news:bturl7$3t$1@xuxa.iecc.com...
> The clarity of local AM radio stations is less at night.

At night, nearly every AM in the US gets skywave intereference, due to the nature of AM night propagation. Distant signals interfere with what are unobstructed day signals, even if the station has the same power.

The only exceptions are clear channel stations, which get a coverage increase due to skywave and being on realtively protected channels.

> Is there
> some sort of law that radio stations have to cut their output when it
> gets dark?

Stations, to operate at night (nearly 35% don't) have to protect other stations on the same frequency, sometimes as much as 1000 miles or more away. Because of this, at night they may cut power or directionalize where htey send it to avoid interference, or both.

>  I've noticed that it's the amount of light outside, not
> the time of day.  That is, the lack of clarity occurs whenever it gets
> dark, not at a certain time each day.

The ionesphere makes AM signals skip form just before sunset to just after sunrise. This is why many US stations are daytime only, since they could not run at night without causing interference to others.

> I always presumed the stations
> were cutting power to save money, but then why would it be based on
> light vs dark, rather than on time of day?

It's due to the laws of physics. Newer stations protect older ones. And many can not even run at night.

>>
I always presumed the stations were cutting power to save money, but then why would it be based on light vs dark, rather than on time of day?
>>

Power and/or pattern change is done to accommodate a station of lesser class against a station of superior class; or a station of the same class, but one which was authorized before the subject station.

AM is a "demand allocation" scheme, and the first station to be authorized is usually the superior station, with respect to subsequently authorized stations.

Extreme example: 710 in L.A. and 1510 in Boston are protected by stations of higher class (710 in Seattle and 1510 in Nashville) simply because these stations were authorized before Seattle and Nashville were authorized. L.A. and Boston remain Class B; Seattle and Nashville became Class A.

Power and/or pattern change is not always at local sunset or sunrise at the affected station. It could be local sunset and/or sunrise at another station (see 1110, 1530 and 1560 for examples). There are historical reasons for this.

So-called DA-3 operation is also possible, where a station has defined day and night operating parameters, but during so-called critical hours it operates differently, usually with parameters in between day and night, although not always.

Many smaller stations are forced to reduce power at night, or go off the air altogether, to protect stations on the same frequency in other parts of the country.

 That is, the lack of clarity occurs whenever it gets
>dark, not at a certain time each day.  I always presumed the stations
>were cutting power to save money, but then why would it be based on
>light vs dark, rather than on time of day?

Because the ionosphere is denser and closer to the earth at night, which
is why you can get transatlantic AM stations at night and not in the daytime.

Here is something the FCC prepared about AM radio at night:

Why AM Radio Stations Must Reduce Power, Change Operations, or Cease Operations at Night
Most AM radio stations are required by the FCC's rules to reduce their power or cease operating at night in order to avoid interference to other AM stations. Our rules governing the daytime and nighttime operation of AM radio stations are a consequence of the laws of physics. Because of the way in which the relatively long wavelengths (see Footnote 1) of AM radio signals interact with the ionized layers of the ionosphere several miles above the earth's surface, the propagation of AM radio waves changes drastically from daytime to nighttime. This change in AM radio propagation occurs at sunset due to radical shifts in the ionosphere layers, which persist throughout the night. During daytime hours when ionospheric reflection does not occur to any great degree, AM signals travel principally by conduction over the surface of the earth. This is known as "groundwave" propagation. Useful daytime AM service is generally limited to a radius of no more than about 100 miles (162 km), even for the most powerful stations. However, during nighttime hours the AM signals can travel over hundreds of miles by reflection from the ionosphere, a phenomenon called "skywave" propagation. (Shortwave stations, which operate using AM modulation on several bands between between 2.3 MHz and 26.1 MHz, also use this phenomenon to broadcast still greater distances, up to thousands of miles). Because of this change in signal propagation from daytime to nighttime, if every AM station kept its daytime operating power at night, massive interference would result. (See also Hours of Daytime-Only AM Broadcast Stations, First Report and Order, BC Docket 82-538, 95 FCC 2d 1032 (1983) for a similar description.)

The FCC was established by the Communications Act of 1934, and was given the responsibility of making a "fair, efficient and equitible distribution of radio service" to the various communities of the United States. In order to meet this responsibility, and in recognition of the physical laws which govern AM radio propagation, the FCC established three basic classes of AM stations (Clear Channel, Regional, and Local), each of which operates on specified frequencies, or channels There have been some changes since then, but the main features of the plan have remained in place. Here is a quick summary of the three types of AM stations:

a.. Clear channels. On these channels, only one station, called the "dominant" station, was permitted to operate during nighttime hours in order to provide service to a wide area. Footnote 2. A typical clear channel station, transmitting with power of 50 kilowatts into an omnidirectional antenna, provides nighttime skywave service to an area approximately 750 miles in radius. Some examples of clear channel stations are WCBS in New York, WGN in Chicago, WHO in Des Moines and KFI in Los Angeles.

b.. Regional channels. On these channels several stations are permitted to operate during nighttime hours, protecting each others' nighttime service areas by use of directional antennas. As the name implies, stations on regional channels provide nighttime service to moderately-sized or "regional" areas.

c.. Local channels. Essentially, all stations on local channels are permitted to operate during nighttime hours with the same facilities as employed during the daytime. The nighttime service of such stations is limited to very small "local" areas by massive interference from the numerous other stations on the channel.

For the most part, the basic structure of the FCC's original frequency plan has remained unchanged over the past several decades. Additional stations gradually have been permitted to operate on the clear channels. In order to preserve the wide-area nighttime service provided by the dominant clear channel stations, when nighttime operation is permitted, many of these these stations are required to use directional antennas in order to protect the dominant clear channel station from interference to its nighttime skywave service area. Most of these stations are also required to reduce power at night, to avoid causing interference to the dominant stations and to each other. Other stations, which cannot afford the necessary protection at night to other AM stations, are presently licensed to operate during the daytime hours only. (New daytime-only stations are no longer being authorized, since December 1, 1987.)

To find out what daytime and nighttime operations are authorized for your favorite AM broadcast station, you may use our AM Query. The Hours of Operation for this Record field for the station will indicate what hours the station may operate with the listed station parameters, either as Unlimited hours operation, Daytime, or Nighttime. If the record shows the "Hours of Operation" as "Daytime" or "Nighttime", then you can find the approximate monthly times that the station will change from day to night operation (or cease operation for the night in the case of a daytime-only station) by entering the coordinates (latitude and longitude) into the the Sunrise / Sunset Times Calculations program. Note that a station may have multiple records, for different daytime and nighttime operations.

I remember the Hipcrime attacks of a couple of years ago, but I didn't
remember them making it into moderated groups. Then again, I'm a Usenet
newbie of only seven years. You're right about this attack -- just saw the
message in rec.arts.movies.reviews, another moderated group.

Turn this into lemonade. I look at as a plus. Here's a candidate who
can represent all his constituents, unlike l'il Bush who seems to be
most comfortable with radical Fundamentalist Christians.

Do you want peace?
Do you want to do something for peace?
Do you want to transmit for peace?
Radio rainbow is going to transmit for peace.
Talk to people. Directly.Talk to their conscience. Talk about starting conversations. Talk about making a difference. Talk about more colors than black and white. Talk about the Rainbow. And good music. Nice programs. Creating a brotherhood of peaceloving people.By reading their e mails. Hearing their thoughts. Bouncing across the earth.
We do not only want to talk to good people. Also to bad people.
We are going to transmit. From sea. The North Sea. From a ship. I know, thats exiting.
We are not rich. We are idealists. Like you. We do have a ship. We do have the people.
We do have in this stage a low power transmitter on shortwave 75 meter band, and medium wave.
So you can hear us. In the Netherlands. United kingdom. Belgium. Germany. Thats it. But the world is bigger.
And your transmitters may be better.
If you own a free radio station, please relay this signal, so more people can get Loving Awareness.
Why should this be done by free independant radio stations? Because nations are doing politics, are involved in conflicts.
People are making peace. Individual. If we should have one listener, he or she could make a difference. Save a life. Thinking Big.
Because of free independant global transmissions by several free stations from several parts of the world. Because of this , Radio Rainbow don't want to be related to a country. Thats why we will be transmitting from a ship in international waters. The begintune will be She's a Rainbow by the Rolling Stones. Transmissions will start soon. Please, please reply. Please take our transmission for you, at wednesday evenings at 10 o'clock U.T.C. (g.m.t.) and forward them.
Save lives. Bring peace. By transmitting one hour a week for Peace.This message is sent to you. Please sent this mail to all of your international radio friends. Please reply on this mail. Let us know what you can do. We will let you know when the first

transmission will start on which frequency's.
Thank you!
Karel van Raan, press agent Radio Rainbow project. Be with us. Give us your thoughts. radiorainbow@hotmail.com

Christopher C. Stacy wrote:

>I don't understand what the problem is.  Can't you just choose
>not to select those (clearly marked) articles for reading?

I would not characterize this as a "problem." It's a constructive suggestion to improve Airwaves.

Two issues:
I read Airwaves via digest form, not individual Usenet articles (if it's even still on Usenet). Regardless, while I *can* scroll past postings via the digest in which I'm not interested (which I regularly do on many lists I receive), doing so is inconvenient when the individual posts are as lengthy as these two regulars are (often 1/3 or 1/4 of an entire digest for just one of them - see forthcoming remark about bandwidth). I spend enough time reading the info I *want to* read on the many lists to which I subscribe; I don't need to waste time downloading and sifting through extended postings that are better left to their own sites or mailing lists.

#2: It's rude to more or less hijack Airwaves with these posts and the like when the postings are as long and as regular as these two examples are. If a single one-off on-topic post is contributed by someone, that's not a concern. However, it's a waste of bandwidth to repeatedly, week after week, post long playlists and scripts to a forum like Airwaves, which is not a playlist or script repository. There are alternative and more effective methods to distribute the entire volume of information contained in these posts.

>Spam is really only a problem if it's overwhelming, or unmarked.

I didn't suggest the ARRL and WCBN posts are spam. I do, however, believe it is inappropriate to regularly post *lengthy* playlists and program scripts to an emailed listserv when (IMO) the courteous and practical method to share the info is to simply post a URL where interested readers can find detailed information. Airwaves can certainly be used to post some headlines from the playlist or script accompanying the URL to offer an idea of what the updated script or playlist contains, but not the whole damn things.

This is not a major earth-ending issue, but I think my suggestion is practical and courteous for readers.

Don't you have a sense of smell? I don't think there's a way to be absolutely accurate in traffic reporting. I can't count the number of times I've been returning to New York from a camping trip listening to one of the all news stations and being told it's backed up for miles as I breeze along at 65 (being passed by everyone else).

The converse has often been true. Everything is reported as clear as we sit in bumper to bumper traffic long enough to wish we hadn't had those last 3 cups of coffee or took the advice of that lady whose husband is constipated.

Another traffic problem indicator is thick black smoke ahead. You can assume you be communing with your car for an extended period. Yet another nighttime clue is miles and miles of red lights ahead of you that don't seem to be moving forward.

I now live in Western Massachusetts and have no hope during the day of being told there's a flaming tanker truck heading my way. There's no all news station and no one dares break away from Rush Limbaugh except to run a few drug commercials.

I've found the absolute best traffic info comes from Ham Radio operators chatting on repeaters as they watch their cars boil over. Get a simple scanner and program the local 2 meter repeaters into it. Most of the usual conversation is about gout and medical problems until traffic takes over. It hasn't failed me, yet. As a Ham myself it has the added advantage of providing me with local directions. Hams are great people always willing to help even with something as simple as finding the local carbohydrate palace.

>Listen to channel 19 on the old CB radio ??? <lol>

Won't work. You'd be disrupting the search for hookers at truck stops.

CB Chan 19 is probably the best solution.  Broadcast traffic reports hardly
ever helped me.

I knew this would eventually happen. You and I usually agree on most things. With IBOC we part company. I'm not ready to accept improved degradation.

I've heard the New York IBOC stations both on analog and IBOC receivers. It was annoying as hell. Now that I'm at a distance where their signals don't overload my receiver I can hear the adjacent hash on every AM receiver I own.

Rich

Okay, time for a little unofficial survey -- for those of you who engineer AM stations, how much pre-emphasis do you use?

In the late '80s, the NRSC established a standard "modified 75 uS" AM pre-emphasis curve, but the FCC never officially made its use a requirement, except for AM Stereo stations.  And today, it seems that most AM stations are using a higher amount of pre-emphasis -- even many AM Stereo stations.

In fact, the Optimod 9100B offers four different pre-emphasis curves: "Blue", "Red", "Yellow", and "Green".  "Blue" is the NRSC curve, while the others provide increased amounts of high-frequency boost.  The "Green" curve can be maxed out to provide over _twice_ as much pre-emphasis as the NRSC curve!

The mono Optimod 9200 offers a similarly wide choice of pre-emphasis curves, and in fact, it comes shipped from the factory with a default setting which exceeds the NRSC curve by up to 3 dB at mid-range frequencies (~4 kHz).

The result of this variation, combined with the overwhelming predominance of Optimod processors on the AM band, is that we're basically back to square one, before the NRSC standards were created. Some AM stations sound dull and muddy, while others sound tinny and shrill -- and you don't even need a "wideband" receiver to hear the difference.

Over the decades, adjacent-channel interference is the number-one complaint which has led to almost universally narrow-bandwidth, low-fidelity AM receivers.  But Optimod-ized AM broadcasters are only aggravating this problem by using extreme amounts of pre-emphasis.

And now, IBOC proponents want to "solve" this problem by chopping off everything above 5 kHz.  They even claim analog AM radio will sound _better_ as a result, because receivers can be opened up to 5 kHz bandwidth, as compared to the 2 - 3 kHz they typically offer today. But says who?  The hundreds of pages of iBiquity, NRSC, and FCC documentation I have read make absolutely _no_ mention of what kind of pre-emphasis, if any, IBOC stations should use, or how much bandwidth the analog portion of IBOC receivers should provide.

Meanwhile, the Omnia 4.5 AM audio processor curiously appears to offer no user choice of pre-emphasis.  It does offer a choice of 4, 6, or 10 kHz audio bandwidth, but the user's manual makes no mention of pre-emphasis at all.  I guess Omnia chose a curve that "sounds good" to them, and that's that?

When it comes to seeking reviews of worldband receivers there are several
excellent sites.

But what is the situation when one is looking for reveiws of non-worldband
radios?  Radios that only cover LW, MW and FM?  It seems that this catagory
of radio does not attract the same attention when it comes to reviews.

Can anybody direct me to any review pages  where I can find articles on
these non-worldband radios?

TIA.

(Replies/Followups will go to rec.radio.broadcasting).

I suspect it may be a problem in the STL.  Or possibly a processor that they
are monitoring "in front of"... I can't imagine the sales droids not
mentioning it to the technical staff, however.  When it is bad, it is dreadful
sounding.   Almost like overmod, but without the loudness.  Something is
clipping when it shouldn't be.

Reception of Cuba in Puerto Rico is quite hard. One is about 800 to 900
miles from the major transmitters, and N/S propagation in the tropics eems
to cover greater distances on MW than E/W. At least, that is my impression
from living in the tropics for over 30 years.

> I have a 4VEH QSL, back from 1979 (of course this was when they were
> on shortwave). Mostly block religious programming from the States, if

In my time living in PR and DXing, I rarely heard a Haitian, and those that
did come in were the long gone split frequency ones at 1035, 1285 and 1325
(if I remember right)/ There was also a low-power at 1145, but very hard to
get even in PR.

Hello,

I have a fanclub website that might be of interest to fans of old movies. Many of you are, I sure, familiar with Joe franklin. His TV show ran for 40 years and his radio show "Memory Lane" can still be heard on Saturday at midnight until 5AM on WOR radio (NYC) 710AM. I have become very good friends with Joe and also appear on the show. The fanclub is free and contains many photos, music, and tons of links to websites relating to old film, entertainers and nostalgia in general. It is part of Yahoo groups and can be reached at this link:
http://groups.yahoo.com/group/JoeFranklinFanClub/
Sincerely,
Paul K Eversman

Perhaps the format wasn't enabling them to make money, or if there were profits, they may have been marginal.

It's traditional in the radio biz to NOT tip off anyone to major changes. As a layman, I can only surmise some reasons for doing this -- one, they don't want the staff to know, lest they bail out before their firing day, or end up with a competitor before the format change, or worst of all, organize campaigns to keep their jobs. There is also the concern that they might do something on air before their termination; then again, if someone did, it would lead to publicity for the station, which they might welcome. It's a strange game, that radio biz.....

> When
> people tuned in for the morning show the next day, there were two guys
> who didn't know what the heck was going on fielding calls from
> confused and irate listeners

There was an instance where a local AM station fired the afternoon DJ / talk show host in the MIDDLE OF HER SHIFT!!!!! She did a drive time DJ stint from 3-6, then there was a break for news, and she normally did a talk show from 6:15-7:30. She was promo'ing her talk segment, including blurbs about an author who was going to be interviewed. When the news ended, there was a satellator show on from Baltimore. How to handle the calls? The station took the phone off the hook! (Very courageous move).

I apologize to anyone if the questions I am about to ask sound stupid.

I work for a small college radio station in Missoula, MT USA. I ended up being the assistant engineer - our contract engineer is very busy, because he works for Fisher Communications.

Recently we lost our Optimod 8200 to some major power spike, so we had it sent in and repaired. During the repair we had it upgraded from the 1.2 software to 3.0 and 5 bands rather than 2. Public radio bailed us out with one of their backups while our processor was being repaired.

We got it back and installed it using the quick setup. I started to notice really bad distortion on program peaks in the low range - below 200 hz kicks.
The first kick on say some hiphop track would "suprise" the optimod and distort. When it adjusts for this kick, anything after the kick is not distorted.
I check the output on the board and found it was running at 1.23v - I brought it down to .775v and I still have the same problems.

I use the default presets built into it - first rock open, then urban/rap-dense.
I turned up the bass coupling a bit, and turn the bass boost completely off, and the distortion became very minimal.
Would this be because the source is being distorted, and the optimod is emphasizing the distortion?

Also I checked the input vs the output with the i/o meters - showing the input float around -7 on most material, and the output of course at 0, and composite at 100%.

We use analog inputs
going from the board, it passes through a delay (I verified this is not causing the distortion at all), then through a Sage EAS Endac, then on to the optimod.

I've gone through quick setup tons of times with no luck (I am obviously doing something wrong).

The board is calibrated so at exactly 0db on the VU meters with a +4db tone input it outputs .775 volts or 0db. In the I/O Calib screen given this information what should I set the A-I Clip LNL dBu, and the A-I Ref LVL dBu?

Should the urban/rap-dense cause distortion by default?

Also an off-subject question:
Does the default classical setting utilize the 5 bands, or will it switch to 2 bands?

I appreciate any help anybody can offer - I'm sure I probably sound like a complete fool above this, but I'm trying as hard as I can to get this station sounding good.
I've read the manual to the optimod like 3 times hehe

If you want to contact me on aim, or icq or email...

Rich - I've got the scoop on traffic reporting and other "breaking news" items on broadcasting....in many cases, they're bogus.

Traffic reporting, as I've seen, experienced and even participated in, is often so old that if you take the advice to avoid a backup, you'll often end up just adding time and distance to your trip, since the cause of the backup and most of the backup itself is already gone by the time you hear the report on the radio. The whole reason why traffic reports exist on radio is to make it seem that you're getting up-to-the-minute reports, and since the majority of the roads covered aren't used by a specific commuter (how could it be otherwise) there's no way that individual listeners can check on how accurate the reports really are, and when the alleged backup on the road travlled seems to have evaporated, said listener simply thinks they got lucky that time.

"Breaking news" is often as much as 6 hours old, with the major actor(s) already apprehended or otherwise dealt with. And, as often as not, the newspaper story the next day will have the actual story, whereas the field reporter, being so far from reliable sources of information, will have gotten it wrong in the live shot, breathlessly intro'ed by the blowdried anchor whose closest encounter with a real news event was the time he was at the Orlando airport when a plane went down....in Europe.

Yeah, I'm being snide. But these days, with localism all but gone in American radio, it really is mostly smoke and mirrors. I'll admit that with the trafficams going up in various major cities it may be easier for the information to be accurate and timely, but without these tools, you might just as well have a field reporter (or DJ aspirant...it seems the job of traffic reporter is often filled by failed jocks) call in to the station while the sound effect of a helicopter plays in the background. (And I hope I haven't revealed any trade secrets!)

Why the confusion? The flagship station of the WOR Radio Network
doesn't carry one of the programs it distributes to its other
affiliates. There's nothing unusual, or sinister, about that.

> Okay, time for a little unofficial survey -- for those of you who engineer AM stations, how much pre-emphasis do you use?
>
> In the late '80s, the NRSC established a standard "modified 75 uS" AM pre-emphasis curve, but the FCC never officially made its use a requirement, except for AM Stereo stations. And today, it seems that most AM stations are using a higher amount of pre-emphasis -- even many AM Stereo stations.
>
> In fact, the Optimod 9100B offers four different pre-emphasis curves: "Blue", "Red", "Yellow", and "Green". "Blue" is the NRSC curve, while the others provide increased amounts of high-frequency boost. The "Green" curve can be maxed out to provide over _twice_ as much pre-emphasis as the NRSC curve!

Hi Kevin,

I don't know anything about the Optimod 9100B, do you know what the various curves look like? It would surprise me if they simply added more and more "preemphasis". IIRC, and of course I may not, the original Optimod 9000 had separate equalization controls for peaking the area around 3,500 Hz where the typical AM radio is rolling off, and a separate control for the higher frequencies up to 10 kHz or so. If I remember it correctly, the idea was to be able to boost the frequencies that would help the typical radio the most, without overdoing it at the higher frequencies, and causing problems by boosting frequencies that weren't going to be heard anyway, except on a minuscule number of radios. I wonder if the four different colors don't mainly provide different amounts of peaking in that mid frequency area where most radios need some help?

> The mono Optimod 9200 offers a similarly wide choice of pre-emphasis
> curves, and in fact, it comes shipped from the factory with a default

> frequencies (~4 kHz).

If I follow you, this midrange boost is consistent with the equalization
in the Optimod 9000, and what I would guess the colors might do in the
Optimod 9100B, i.e. provide midrange boost beyond the NRSC curve.

> The result of this variation, combined with the overwhelming

> difference.

I assume that's the intention, the optional mid range boost is there to
help the typical radio.

> Over the decades, adjacent-channel interference is the number-one

> low-fidelity AM receivers.  But Optimod-ized AM broadcasters are only
> aggravating this problem by using extreme amounts of pre-emphasis.

I wonder if it is "extreme amounts of pre-emphasis", or just the extra
midrange range hump in the 3.5 to 4 kHz area that you are hearing?

Why not just equip your radio with a complimentary four color equalizer switch?

Regards,

John Byrns

Well, here in the US there are only a small handful of them that are any
good at all.  There's the GE Superradio, and the Henry Kloss gadget and
that is about it these days.  Unless you are talking about devices intended
for special purposes, like the Magnum Dynalab tuners or modulation monitors.

>Can anybody direct me to any review pages  where I can find articles on
>these non-worldband radios?

Can you still get the Roberts radios in the UK?  They used to have at least
acceptable RF stages.

No reviews on the web page, but you might find www.radioguide.co.uk of interest. Somewhere to start anyway.

Rod.

My limited experience (3-day business trip to San Juan) seems to bear
this out....I picked up the Bahamas and the Virgin Islands relatively
clearly during the day, but after dark, Venezuelan stations stomped
all over everything. I don't recall even hearing PJB 800 on Bonaire....

You're right about the sound, but their studios are at the transmitter.
Other local engineers have mentioned it to their engineer, but no
change.  Perhaps management just doesn't care, or won't spend the money.

Of course I'm no more 'locked into' a Sirius music stream than if I were listening to any other station that doesn't report on the particular road I'm riding.

I'm in dairy country, so the sniff test is not a reliable indicator of oncoming sewage sludge. There'd be too many false positives. Likewise with a couple of little kids in the car.

In a rural area, the local dial is good for a whiff of nostalgia, rather than for actionable information on the road. Visiting NYC, traffic reports can be used skillfully. Presets for traffic on the ones, fives and eights, and I bounce from report to report to choose among competing routes.

Telematics is one of satellite radio's killer apps. I expect that in a couple of years satellite receivers will be receiving traffic and weather information text encoded from all over the country. Subscribers, having previously punched in the routes and zones they're interested in, will obtain that information on the road via synthesized voice over the music bed.

While I think you're being too harsh with blown-dry anchors (there's
an entire hairdressing and makeup industry at stake) I would
occasionally listen to my NYC precinct's frequency. I was amazed often
at how quickly the police apprehended the person they were after. It
was old news before it got to be news.

In my new market we have an anchor who must be the wife of the owner.

She looks as though she just rolled out of bed. I can only imagine what the show looks like in HDTV where Bondo as makeup no longer works.

> I don't know anything about the Optimod 9100B, do you know what the
> various curves look like?

The graph is a bit messy, but here are the 9100B's pre-emphasis curves:

http://ourworld.compuserve.com/homepages/kevtronics/opt-emph.gif

The "Red", "Yellow", and "Green" curves are all continuously variable from 0 dB (flat) to a maximum of 22 dB boost (at 10 kHz).  This graph shows what each of these three curves look like at boost values of 5, 10, 15, and 20 dB.  Meanwhile, the "Blue" NRSC curve maxes out at a boost of 10 dB, as shown, which meets the NRSC pre-emphasis standard exactly.

The Optimod 9200's factory-configured pre-emphasis is equivalent to the "Red" curve at 10 dB boost -- in other words, the first curve on the graph above the NRSC curve.

> I wonder if it is "extreme amounts of pre-emphasis", or just the extra
> midrange range hump in the 3.5 to 4 kHz area that you are hearing?

The amount of increased boost extends all the way to 10 kHz, regardless of which non-NRSC curve is selected, so even the higher frequencies (which only "wideband" receivers can fully discern) are increased as well.

> Why not just equip your radio with a complimentary four color equalizer
> switch?

Because I shouldn't have to.  FM radio, TV audio, phono records, audio tapes, and even CDs all use standardized pre-emphasis curves, with no user interaction required.  Why should AM radio be the same?  Canada made the complete NRSC standards, including pre-emphasis, mandatory for all of its AM stations in 1988.  But the FCC chose to keep the NRSC standards "voluntary" in the USA, except for a rather lenient RF spectrum occupancy mask which effectively limits transmitted bandwidth to +/- 10 kHz (but yet has allowed the disastrous +/- 15 kHz IBOC system to be used, since its sidebands conform to this RF mask which was never intended to accomodate digital signals).

The primary goal of the NRSC was to encourage the manufacture of high-quality AM receivers, by reducing adjacent-channel interference and providing a "level playing field" of how AM stations broadcast their signal.  Today, unfortunately, these high-quality receivers may be few and far between, but that does _not_ mean that this kind of "every man for himself (or station for itself)" attitude should prevail!

p.s. One correction:  The Omnia 4.5AM processor does indeed provide pre-emphasis that conforms to the NRSC curve.  However, if desired, the user may provide extra mid-range or treble boost by using the EQ controls.

I'm not confused. I talk with The Dolans regularly. They're no longer
with WOR. They're concentrating on CNN.

If the flagship doesn't carry its own network shows it's very
difficult to affiliate those shows. Many PDs feel if it's not good
enough to be on your flagship, why should I take it?

When I was running the WOR Radio Network every show but one weekend
food show was also on WOR, New York.

I would really doubt the Bahamas during the day.

the two Bahamian AMs are on 810 and 1540. Puerto Rico has a 50 kw on 810 and a smaller local on 1540 (which is impossible in San Juan due to strong 1520 and 1560 locals. The Bahamas are a very hard log in PR... nearly 800 miles away.

Could what you heard be 780 out of Tortola, British Virgins? 10 kw, non-D. Another that used to come in well outside San Juan was 800 in Bonaire when they still ran 500 kw. No signal on north side of PR, though.

USVI stations on 1000 and 970 do make it OK daytime to San Juan, particularly near the airport area.

Hmm. As I recall scanners are illegal in cars in many states, several surrounding New York. We know you wouldn't want to commit a crime, so you'll remove it, I'm sure.

If you have a Ham license, you're exempted.

I'm not sure why you'd do that since it's available on nearly every station in the city.

Thanks for posting the curves. It is not completely clear to me which ones go together in a family, but from what you are saying, it sounds like the "color controls the high frequency boost at 10 kHz, and then there is a separate "mid frequency" equalizer control that controls the bump in the 4 to 5 kHz area?

> The Optimod 9200's factory-configured pre-emphasis is equivalent to the "Red" curve at 10 dB boost -- in other words, the first curve on the graph above the NRSC curve.

That makes sense, if I have the right curve that is the one I would probably choose, either that or one of the others in the group that ends with 10 dB boost at 10 kHz.

> > Why not just equip your radio with a complimentary four color equalizer switch?
>
> Because I shouldn't have to. FM radio, TV audio, phono records, audio tapes, and even CDs all use standardized pre-emphasis curves, with no user interaction required.

Since when was this the case? The equalization for all these media is adjusted on the source side to suit what the originator thinks is best. Why should AM radio be any different?

> Why should AM radio be the same? Canada made the complete NRSC standards, including pre-emphasis, mandatory for all of its AM stations in 1988. But the FCC chose to keep the NRSC standards "voluntary" in the USA

The FCC doesn't even specify pre emphasis for FM except for a maximum that is allowed, but I don't even see why they bother with that, how can they enforce it, to really control it they would have to regulate the entire audio chain back to the original pickup microphone, and even the acoustics of the original performance venue.

"David Eduardo" <radiodavid@yahoo.com> wrote in message news:<bs0ab4$l4v$1@xuxa.iecc.com>...

> However, there are a "scad" (to avoid having to say either "many" or "most") of AMs that do not deserve to exist, as they cover very little, or have miserable facilities and high-Q DAs and no intent to improve. I just wonder if IBOC may create a band cleansing in the process.

Could you clarify a portion of your statement for me? Are you really saying that AM stations with little coverage should just go dark? What about AMs that serve small towns and rural areas?

Just wondering...

> 4 to 5 kHz area?

The color (Blue, Red, Yellow, or Green) determines the shape of the pre-emphasis curve, and the user can also select the total maximum boost (at 10 kHz) to be applied.  The Optimod 9100B does not provide any other audio tone/equalizer controls, except for an optional bass boost feature.

The 9100B's total audio bandwidth can also be adjusted, of course. With no "brick wall" filter enabled, it provides a maximum audio bandwidth of about 12 kHz.  Western Hemisphere models can select either a 5 or 10 kHz filter.  European and Asian models have a choice of a 4.5, 5, 5.5, or 6 kHz filter.

Meanwhile, the mono Optimod 9200's bandwidth is continuously variable (in 0.5 kHz steps) from 4.5 to 9.5 kHz, and it offers a range of pre-emphasis curves and boosts very similar to the 9100B's.

> Since when was this the case?  The equalization for all these media is
> adjusted on the source side to suit what the originator thinks is best.
> Why should AM radio be any different?

Because there has to be a level playing field.  Why do you think the RIAA curve for phonograph records was established?  Because there was too much variance and too much confusion, and it was inhibiting the goal of providing the consumer with increased fidelity and convenience.

This also applies to AM radio.  Whether it be today's 10 kHz or the 5 kHz that IBOC proponents want, consumers will never get to experience analog AM radio at its full fidelity unless there is a level playing field and a universal standard which manufacturers can design their receivers to meet.

AMs that cover small towns and rural areas, but which provide no local
programming and repeat only satellite programming are not providing
actual service.

Yes, there are some small AM stations that actually have local programming
and which provide a real service to the local community, but these are sadly
in the minority and that minority continues shrinking fast.

> No, the name [Roberts] got bought by some Far Eastern firm, possibly Sangean.

Roberts is owned by Glenn Dimplex group.  SOME of the radios are made by Sangean -- I recognized some models that I've seen under other name brands here in the USA - some are sold as Sangeans here in the USA also.

I don't know if others in the Lifetime range are also made by Sangean.

If so, they may be specifically made for Roberts since they're not on Sangean's website and do not appear under other brand names in other markets.

There are many stations in metro areas that have signals that are so
directional they cover only one side of some streets! Often, these don't
cover any cohesive area, and are simply inadequate for any purpose.

Other stations are so limited in power, or so directional at night they
serve no useful purpose.

Stations with low power can serve small communities. But defective signals
in metro areas are generally not doing anyone any good.

Cleaning out the band selectively might enable some rural stations to g
fulltime usefully, or some metro signals to cover the entire market by
losening the protection requirementos .

For sale: (This is NOT repeat NOT a joke!)

Partial ownership in 1/2 million watt commercial Shortwave station in South Carolina. Said to be the most powerful privately owned SW station in the World!

380 acres, 19,000 sq. ft. building, several curtain antennae, etc. Two 500,000 watt transmitters. Tune it to 40 AM and "away you go"!!! (To Leavenworth, that is!!! HI!)

Joint venture. Total asking price is "only" $6.5 million which is less than the replacement costs.

At only $5,000 per acre, the land alone is worth $1.9 million!

Active or inactive investors with at least $100,000 each are welcome. All investors would be on the board with full voting rights if desired. Hams preferred. No individual may hold over 49 percent and this includes me.

I am NOT a broker, agent, shill, owner or part owner.

FYI the finals of these beasts need more driving power than most hams will see in their life! The power bill will break you!

The station is showing about $250,000 a year cash flow without even trying!

Tel: (478)741-1710 in Macon, GA

I wouldn't say NO listener appeal. I listened to it all the time. I
have a bunch of 80s songs on CD (my CDs were stolen out of my car, so
I replaced them with downloaded copies of the same songs).

For sale:

(The Radio Crazy, it's baaaaaaaaak!!) Hi!

Partial ownership in 1 KW fulltime AM in Odessa, Texas. City of about 94,000 population. Very affluent. I am told this is where the proverbial Texas Oil millionaires hang out!

Joint venture. They are asking $265,000 for the station and I have yet to determine if any real estate is included.

Active or inactive investors with at least $20,000 each are welcome. All investors would be on the board with full voting rights if desired. Let's give "Queer Channel", "CUM on us" and "Sit in hell" a run for their money!

(You know damn well who I mean!!)

Nobody can own more than 49 percent, that includes me!

Tel: (478)741-1710 in Macon, GA.

As usual, for the "flamers" let me say that I am NOT a broker, agent, shill, owner or part owner. I would also state that I am not a crook. Please check with my parole officer or "Brazilian Bandit" airways (Purchased one way to Rio with cash. All small unmarked bills).

Only those fully identifying themselves (and their parole officer if that applies!)will be told call letters.

Please! No "AM bashers" or other negative nabobs. You've "heard this song before"!!!

73,

Meyer Gottesman, W6GIV
Macon, GA

Amateur Radio Newsline� Report 1377 � January 2,  2004

Amateur Radio Newsline report number 1377 with a release date of Friday, January 2, 2004 to follow in 5-4-3-2-1.

The following is a QST.  V-K hams welcome 2004 with new spectrum. P-29 hams enter the new year with no-code and the FCC ends 2003 embracing smart radios.  All this and more on Amateur Radio Newsline report number 1377 for the first week of 2004 coming your way right now.

(Billboard Cart Here)

**

RESTRUCTURING:  EXCLUSIVE SPECTRUM DOWN UNDER

Hams in Australia start 2004 with an unexpected gift.  Some exclusive spectrum in the 75 meter band.  From Brisbane here's Q-News Graham Kemp, VK4BB, with the rest of the story:

--

As of January 1st amateur radio operators in Australia have gained exclusive access to 24 kHz of HF spectrum at 3776-3800 kHz for high frequency amateur radio communications between continents.

The new Australian spectrum allocation for the amateur service is made under footnote AUS8 of the Australian Radiofrequency Spectrum Plan 2002 published by the ACA. It aligns well with international arrangements, which means intercontinental communications for Australian amateur radio operators will be improved at these frequencies.

This domestic change has affected other spectrum users. More than 40 government bodies, community groups and commercial organizations were previously licensed for HF communications within this 24 kHz of spectrum, with amateur operators having lower priority access to 6 kHz.

For Q-News Australia, I'm Graham Kemp, VK4BB, for the Amateur Radio Newsline.

--

A very nice way to start the year 2004.  (Q-News)

**

RESTRUCTURING:  P29Z CALLS GIVEN HF GIFT

Australia is not the only nation in the Southern hemisphere to have some ham radio rules changes with the new year.  A report out of Papua New Guinea says that the tiny nations has welcomed 2004 by going no-code.

According to Rick Warnett, P29KFS, in Port Morsby, the nations telecommunications regulator PANGTEL has issued an opinion confirming that P-N-G hams holding a Limited Amateur Operator's Certificate of Proficiency now have access to all High Frequency  bands granted by PANGTEL.  As a result, from 0000 P-N-G time on December 31st hams assigned P29Z series calls have full High Frequency access in the ham bands from 165 KHz thru 28MHz in addition to their 430 MHz to the multi Ghz allocation.  (Q-News)

**

## RESCUE RADIO: IRELAND PREPARES FOR POWER OUTAGES

Meantime on the other side of the world, what amounts to a mini Field Day exercise took place in Ireland December 6th and 7th. This when that nations ham radio rescue service known as AREN took part in a twenty-four hour simulated test to help prepare members for a possible power failure such as those experienced recently in the US and in the United Kingdom.

The test had several goals. Among them was to establish that AREN members could operate without mains power and to have members ready for activation during a sustained standby period. Also important was maintaining discipline by politely and firmly holding control of a working frequency for the duration of the exercise.

According to assessment reports, the AREN members demonstrated a keen and effective will to efficiently operate such a service. They also held the primary exercise frequency of 3.660 MHz without incident for the duration of the watch period. (IRTS)

**

## RADIO LAW: S.C. INDICTMENT IN BPL RELATED SCHEME

Back here at home, it looks as if the first scam associated with Broadband over Powerline technology has surfaced. Amateur Radio Newsline's Jim Davis, W2JKD, tells us the who, the what, the why and the where:

--

News reports say that two Texas businessmen have been indicted on wire fraud and money laundering charges. This in a scheme that defrauded a South Carolina electric utility out of $1 million.

Prosecutors in Columbia, South Carolina say that the two convinced the utility to invest the money in research they said would allow voice, video and data to be sent to homes and businesses through power lines. According to the documents filed on Thursday, December 18th, the could not deliver on the promises they had made.

Jim Davis, W2JKD, reporting.

--

No trial date has been announced in this case. (Published news reports)

**

Break 1

>From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the Southern California Amateur Transmitting Society serving West Covina California.

(5 sec pause here)

**

THE CHANGING OF THE GUARD:  Joe Knight, W5PDY, - S.K.

Some truly sad news to report.  One of the nicest people ever to hold a ham radio license, Joe Knight, W5PDY, the recently retired New Mexico ARRL Section Manager, died on December 28th.  Knight  was in declining health when he passed away in Albuquerque at age 76.

For those not aware, Joe Knight held the honor of  the longest tenure of any Section Manager in history.  He was elected to the post in the mid 1970's and only stepped down last July after his health began to fail.  In all he served as New Mexico Section Manager close to 27 years.  A record never before matched.

Knight was the subject and chief narrator of an article, "The Luckiest Man Alive," which appeared in the January 2003 issue of QST Magazine. In it,  Knight said that Amateur Radio will exist as long as there are people who love the art and science of communicating by radio.   The article also outlined the vast emergency communication resources that Knight and hundreds of other dedicated volunteers built up over the years in New Mexico.

John Stuart,  AC5ZO, the president of the Albuquerque DX Association, visited Knight on December 22nd.  At that time Stuart presented Knight with an honorary membership certificate in that group.

Survivors include his wife, Lois, KC5CXO, who often accompanied Knight on his hamfest and convention visits and was a tireless recruiter for new ARRL members.  (ARRL, W7AS, N7US, others)

**

CHANGING OF THE GUARD:  Emmanuel G. Papandreas, W4SS, - S.K.

And former ARRL Southern Florida Section Emergency Coordinator, Emmanuel G. Papandreas, W4SS, of Lake Worth, passed away, Friday, December 26th at age 80.  Manny as he was better was Southern Florida was SEC for 20 years.  A record longer than any of his predecessors. And during his tenure, Papandreas oversaw the amateur emergency communications effort following Hurricane Andrew in 1992 including the staging area at the South Florida Fairgrounds in Palm Beach County.

W4SS was a life member of the West Palm Beach Amateur Radio Club and served numerous terms as President. He also taught amateur radio classes and was an ARRL Volunteer Examiner in Palm Beach county. And, over the years, W4SS was the recipient of many awards and honors from the South Florida agencies served by Amateur Radio. (WA4AW)

**

## RADIO RULES: FCC OPENS SMART RADIO PROCEEDING

Turning to the regulatory scene, the FCC has adopted a Notice of Proposed Rulemaking and Order that sets out proposals and seeks comments on the uses and applications for "smart" radio systems. This, In light of the ever increasing demand for wireless transmitters.

Smart radios have the ability to adapt their use of spectrum to their environments. For example, a smart radio system could use geolocation and table lookups to determine whether certain frequencies are candidates for use in a particular area. Then, those frequencies could be scanned, idle spectrum identified, and the best frequencies and power levels selected for a particular link.

More is at http://hraunfoss.fcc.gov/edocs_public/attachmatch/DOC-242312A1.doc and http://hraunfoss.fcc.gov/edocs_public/attachmatch/FCC-03-322A1.doc on the World-Wide-Web. (CGC, FCC)

**

## ENFORCEMENT: YOU CAN FLY BUT YOU CAN'T USE THAT RADIO

The FCC has asked more groups representing hang glider enthusiasts to tell their members to stay off the ham bands unless they hold Amateur Radio licenses. The agency's Daryl Duckworth, N-N-Zero-W, has more details:

--

Audio report only. Hear it at www.arnewsline.org

--

Hang gliding zealots who fail to heed the FCC warning could face some pretty severe penalties. (FCC, RAIN)

**

## ENFORCEMENT: COMPANY FINED $8,000 FOR FAILING TO PAINT TOWER CABLES

The FCC has issued an $8,000 fine against Tower Properties of Florida, Inc. for having unpainted cables attached to their tower structure. Cables that the regulatory agency says precluded good visibility of the orange and white aviation-painted structure.

Section 17.50 of the FCC's Rules provides that antenna structures such as this one that require painting will be cleaned or repainted as often as necessary to maintain good visibility.  Further, as incorporated by reference, alternate bands of aviation orange and white are normally displayed on coaxial cable, conduits, and other cables attached to the face of a tower.  (CGC, FCC)

**

COMMUNICATIONS LAW:  JUDGE RULES ISP'S DO NOT HAVE TO PROVIDE INFO TO MUSIC INDUSTRY

Meantime, back here in the United States, a major setback for the music industry's anti-piracy campaign.  This, a federal appeals rejects efforts by the music producers to compel the nation's Internet providers to identify subscribers accused of illegally distributing music on-line.  Amateur Radio Newsline's Bruce Tennant, K6PZW, has more:

--

It happened on Friday December 19th and it's being called a substantial setback for the entertainment industry.  This, as a three-judge panel from the U.S. Court of Appeals for the District of Columbia overturned a ruling by the trial judge to enforce a copyright subpoena.

Earlier a trial judge had authorized the use of the subpoenas forcing Verizon Communications Inc. to turn over names and addresses for at least four Internet subscribers.  Verizon complied but instructed its lawyers to challenges the ruling.

In its decision, the appeals court not only sided with Verizon.  It went a step further.  This, by declaring one of the crucial arguments used by the Recording Industry Association of America to obtain the original order as -- quote -- bordering upon the silly.  The judges words-- not ours.

What does this mean to those artists and companies wanting to protect their intellectual copyright?  It won't stop the entertainment industry from suing those who continue to swap music and video files peer to peer,  but it will make them a lot harder for the industry lawyers to locate.

>From the entertainment capitol of the world, I'm Bruce Tennant, K6PZW, reporting for the Amateur Radio Newsline

--

Its not known if the recording industry plans to appeal this latest decision against it to the U-S Supreme court.  (Published news reports)

**

ON THE AIR:  IOTA 40TH ANNIVERSARY AWARD

Turning to operating events, Don Field, G3XTT, wants to remind Islands on the Air Award enthusiasts and would-be enthusiasts that 2004 marks the 49th anniversary of this unique program.  Don says that a set of files for downloading with lots more information are now available on the Chiltern DX Club website at www.cdxc.org.uk  Just follow the IOTA 2004 links and remember this years award began on January 1st.  (RSGB)

**

HAMFESTS AND CONVENTIONS:  HAMFAIR NY IN FEBRUARY

And a reminder that Sunday, February 29th is the annual Long Island Hamfair and Electronics Show Winterfest sponsored by the Long Island Mobile Amateur Radio Club.  The doors open 9:00 AM for buyers. Admission is $6 with children 11 and under welcome through the gate for free.

The location is Levittown Hall in Hicksville, New York. Complete directions are available on the Long Island Mobile Amateur Radio Club website at www.limarc.org/fest.htm  (LIMARC)

**

HAMVENTION 2004:  AWARD NOMINATING PERIOD CLOSES JANUARY 31ST

And the planners of Hamvention 2004 want to remind everyone that the nominating period for the Radio Amateur of the Year, Technical Excellence and Special Achievement awards program closes on January 31st.

There are three awards that will be given this year.  The Radio Amateur of the Year is described as that special person who has made a long term commitment to the advancement of amateur radio.  He or she is a well rounded individual who has contributed most of his or her lifetime to our hobby in some very outstanding way.

A nominee for the Technical Excellence award should be a person who has made an outstanding technical advancement in the field of amateur radio.  Something like a revolutionary new equipment design or mode of operation that has impacted positively on the day to day operation of many hams.

Last but by no means least, a nominee for the Hamvention's Special Achievement is the kind of special person who has made an outstanding contribution to the advancement of amateur radio.  This award is usually given to a respected amateur who spearheaded a single significant project.

Documentation is required. Magazine articles, newsletters, newspaper clippings, videos, and the like will better inform the Awards Committee of your candidate's accomplishments.

The nomination deadline is January 31st,  All materials become the property of the Hamvention and cannot be returned.

You can fill out the on-line form and attach documentation files at www.hamvention.org.  Then click your mouse on the words award nominations.  Printed nominations and documentation go to the Awards Committee, Hamvention 2004, PO Box 964, Dayton Ohio, 45401.

Again, the deadline for all nominations is Saturday, January 31st. (Hamvention)

**

BREAK 2

This is ham radio news for today's radio amateur.  From the United States of America, we are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

HAM RADIO IN SPACE:  ARISS UPDATE

According to ARISS International Chairman Frank Bauer, KA3HDO, the crew on board the International Space Station does not have time to read messages from the ham public and he advises against sending any. We have more in this report:

--

In letters posted to the SAREX remailer, Frank Bauer, KA3HDO, indicates that ham radio is lucky that the crew has been able to fire up the new Kenwood packet radio system that was recently delivered to the space outpost.  He also says that its not a good idea for hams to send personal e-mails to the astro-hams indicating that they are really to busy to read and answer them.

As to the new radio itself, Bauer says that the unit is a Kenwood D700 that has been modified to support up to 25 watts maximum output. Normally, if the crew has the system configured with the default settings.  This means about 10 watts out which is medium power on the 700.

Regarding the packet frequencies and why split channels rather than simplex is used, Bauer says this.  145.80 MHz is designated a human spaceflight downlink frequency.  Right now it shares use on voice and packet for general operations and school group contacts. In the future it will be used at times for voice, packet, repeater capabilities, school group contacts and S-S-T-V. Because of this, the ARISS team would like to keep the downlink frequency clear for all to hear and receive. Therefore, packet simplex is use not a good idea on this frequency.

I'm Bill Pasternak, WA6ITF

--

Meantime, Miles Man, WF1F, has posted some photos of the new station on his MAREX website. The URL is:
http://www.marex.org/hardware.kenwood.html (SAREX BBS, WF1F)

**

EMERGING TECHNOLOGY: RADIO BRINGS FASTER FAST FOOD

On the emerging technology front, fast food has gotten even faster in southern California thanks to the magic of radio. This as five McDonald's restaurants sign a deal with a communications company to allow motorists to zip through the drive-through line without having to stop and pay cash for their food.

The trick is utilizing the same technology that permits motorists to skip stops on toll roads. A transponder will emit a signal to a receiver at the food giant that will automatically calculate the food the fee. The motorist is then billed. The process is said to cut 15 seconds off the normal 131 second-wait for delivery at the payment window. (Technology Corner)

**

INTERNATIONAL-ARGENTINA: ANDES MOUNTAIN LAND CROSSING

>From the international page, Carlos Beviglia, LU1BCE, says that between January 4 and 15th, the Radio Club Argentino will participate in the 6th Andes Mountains Land Crossing. LU1BCE is the Secretary of the Radio Club Argentino. He tells the Ohio Penn D-X newsletter that this trek is made every year to honor General San Martin and his army's crossing to Chile. This, during the American Independence War in 1817.

The Radio Club Argentino will provide the communication for the event. The club will set up two High Frequency stations at every camp point throughout the journey. Operation will be mainly on SSB and C-W using the special event call LS4M. QSL via LU4AA, either direct or via the bureau. (OPDX)

**

INTERNATIONAL-CANADA: MEET THE NEW RAC EXEC COMMITTEE

Meantime, to the North, word that Daniel Lamoureux VE2KA, has been elected as president of the Executive Committee of Radio Amateurs of Canada. This, for a 2004 through 2005 term. Also elected to the committee are First Vice President Robert Nash, VE3KZ; Vice President of Regulatory Affairs James Deann, VE3IQ; Vice President Field Services and International Affairs Pierre Mainville, VA3PM, and Noel Marcil, VE2BR, as Secretary. (RAC)

**

INTRUDER WATCH: THOSE INDONESIANS AGAIN

On the Intruder Watch scene, we have some bad news and some good news. First the bad. VK6XW reports hearing 53 non ham stations on the 14 MHz band operating SSB. He says that most appear to be from Indonesia.

The good news? Word that another group of Indonesians who had been using 14.335 MHz have vanished and have not been found again. The same is true for the bunch on 14.252 which have also disappeared from the Amateur spectrum leaving only the 14.144 gang which have gone LSB and moved up to 14.145 Mhz. (Q-News)

**

SPECIAL EVENT: 50 YEARS A HAM

And you might call this one celebrating a personal best. This as Fort Wayne Indiana's Jack Forbing, K9LSB, takes to the air from March 1st to the 14th as K9L in celebration of his 50 years as a licensed operator.

Jack and his friends in the Hoosierland Amateur Mobile Systems group will operate all bands and all modes from K9LSB's home QTH. Equipment for the event will be a Yaesu FT-1000MP Mark V and a Yaesu FTV-1000 6 meter transverter into an yaggi at 65 feet. All other bands will use dipoles antennas. All QSL's go to K9LSB at his Callbook address. And we wish Jack a hearty well done on reaching this milestone in his ham radio career. (Via e-mail)

**

DX

In DX, 9V1DX, is now active as 9V0A from Ellsworth Mountain in Antarctica. He was spotted in 40 and 30 meters CW. Watch 7.001 or 10.108 MHz between 01:30 and 03:00 UTC. (OPDX)

And W4WX, will be active as KG4DX from Guantanamo Bay, Cuba, from January 13th to the 19th. He will operate the HF bands and 6 meters. QSL to his home call, direct with SASE. (OPDX)

Lastly, AP2JZB, was active recently from Pakistan on 17 and 12 meters SSB . Watch around 18.119 and 24.946 MHz between 13:30 and 15:00 U-T-C. QSL as directed on the air. (OPDX)

**

THAT FINAL ITEM: HAM RADIO HISTORY -- THE FIRST BIG REPEATER MEETING - PART I

And finally this week, many hams are not aware that back in the early 1970's repeater growth and continued experimentation in ham radio relay communication came to a screeching halt. This, as the result of overly restrictive regulations on the part of the FCC.

As most radio amateurs of that era knew, this was not a good time to be the owner of a repeater unless you also held an Electronics Engineering degree. Things had to change if F-M and repeaters were to grow again. In the end, one man risked it all to make it happen.

On January 24, 1974 then 73 Magazine publisher Wayne Green, W2NSD, brought a group of prominent "repeater people" before the FCC. He had arranged the meeting in an attempt to convince the Commissioners to roll back the restrictions put in place as a result of Docket 18803. Here's a sample of what that meeting sounded like:

--
Meeting audio sample
--

Want to hear more? Well, over the next several months you can take a trip back in time to join Wayne Green, W2NSD, former Colorado's Marshal Quiat, AG0X, New York's Howard Lester W2ODC and Dick McKay, K6VGP, from California. This, as they and others go to Washington D-C -- to -- quite literaly -- set repeaters free.

Part 1 of the audio of that meeting is on our website as a Newsline Extra. In it you will meet the hams who traveled to Washington to speak on behalf of the nations FM and repeater community. You will also hear some of the presentations made by them. Its on line now at our f-t-p site at www.arnewsline.org slash quincy.

This is literally a page out of ham radio's history. Its here -- right now for you -- exclusively -- on the Amateur Radio Newsline. (ARNewesline(tm))

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline @arnewsline.org. More

information is available at Amateur Radio Newsline's(tm) only official
website located at www.arnewsline.org.  You can also write to us or
support us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia,
California 91066.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Don
Wilbanks, AE5DW, saying welcome to 2004, 73 and we thank you for
listening."  Amateur Radio Newsline(tm) is Copyright 2004.  All rights

WTNT has stopped carrying the 9 to 10 a.m. (eastern time) hour of Imus
in the Morning. Can anyone please give me the URL of any station's
stream that carries that hour of the show?

Here's notice of an upcoming DX test...

PLEASE NOTE: Even if you don't hear a test, be sure and drop a card, letter, or e-mail to the station personnel, thanking them for going to the trouble to run a test!

Sunday, January 11, 2004 - WKDK-1240, Newberry, SC will conduct a DX test from 5:57-6:00am EST. The test will have the following format:

5:56 am EST carrier on
5:57 am EST 30 seconds of morse
5:57:30 sign on cart
5:59:30  earlier :30 of morse

Reception reports may be sent to:

Powell E. Way III
DX TEST coordinator
WKDK Radio
PO 753
Newberry, SC 29108

(Arranged by Powell E. Way III)

Also, if you hear a test, PLEASE, PLEASE let me know, via either e-mail or in rec.radio.shortwave! And if you send a reception report to
a station, please remember to include return postage with your report...

Lynn.

Yep - downloaded from http://www.music4.com
There is also a behind-the-scenes video of the session...

Very good production - shame I missed the show!

|
| No. It's simply so you have the channel or logo in front of you all
| the time. Copyright holders have no authority over the network or the
| stations in this case.
|
| This is one of the reasons my DVD collection is so large.

That won't necessarily help you. Bugs are showing up on DVDs.

The Rocky and Bullwinkle DVDs have them though they're not on all
the time (and some new titling has been edited in, rather badly in
most cases).

# Amateur Radio Newsline™ Report 1376 - December 26, 2003

Amateur Radio Newsline report number 1376 with a release date of Friday, December 26, 2003 to follow in 5-4-3-2-1.

The following is a Q-S-T. A California city says NO to BPL, an earthquake hits the central California and Kids Day 2004 is just a week or so away. The details on Amateur Radio Newsline report number 1376 coming your way right now.

(Billboard Cart Here)

**

## RADIO LAW: LOMPOC SAYS NO TO BPL

The City of Lompoc, California, has said NO to Broadband over Powerlines, and its a big win for ham radio. Amateur Radio Newsline's Bruce Tennant, K6PZW, has been monitoring the situation and has the details:

--

Paul Andreasen, K1JAN, said it this way -- quote: "Well, we won ONE at least!"

What Andreasen is referring to was a plan by Lompoc city leaders to deploy Broadband over Powerlines in that city and the work of the ham community to head it off.

Andreasen is the ARRL Technical Coordinator for the Santa Barbara Section and a ARRL Technical Advisor for the League's Southwestern Division. And he was one of the organizers of the movement to stop the deployment of B-P-L in the Lompoc area.

In an e-mail, Andreasen says that his group sprang into action when they learned of plans to permit powerline broadband. He presented city leaders with several studies and some facts on interference effects to and from other licensed RF users.

--

Andreasen: "I know the mayor so I stopped in one day and asked him. He said yes they were and I introduced him to some of the facts of radiation not only causing problems with public communications, the CHP, Amateur Radio, etc., but about it also causing problems with the BPL system (itself).

--

Meantime, Eric Lemmon, WB6FLY, made the California Highway Patrol aware of their efforts. The statewide C-H-P radio system operates on low-band F-M which falls right smack in the middle of the spectrum used by B-P-L.

And then they wait until December 17th for the newspapers to report the results of their City Council vote on the matter. The good news: No Broadband Over Powerlines in Lompoc. Instead, the City Council approved a rival, non radiating system that uses fiber optic technology.

But that's not all. The company that did the study for the planners was told by the City Administrator not to entertain any radiating methodologies at all. All because ham radio operators spoke up and provided proof that B-P-L could be hazardous to the regions R-F environment.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, reporting.

--

Another quote from Paul Andreasen, K1JAN, kind of sums it up. "We not only win one, but a bureaucracy kept it's word!" (K1JAN, W6YN)

**

RESCUE RADIO: THE CENTRAL CALIFORNIA QUAKE

Meantime, about 90 miles North of Lompoc an earthquake measuring 6 point 5 on the Richter scale struck at 11:15 a.m. on Monday December 22nd. Centered not far from the famed Hearst Castle tourist attraction at San Simmeon. Ham radio was quick to respond as we hear in this report:

--

K6YR: "Various parts of the livingroom looked like the U.S. Army had gone through a Fedeey'n safe house. Just glass and food stuffs all over the place. It was pretty scary."

--

That's Rob Griffin, K6YR, the Section Manager for the area where the quake hit. He was describing what his own home looked like after the magnitude 6.5 temblor hit. But Griffin would have to put off clean-up chores because there was other work that needed to be done:

--

K6YR: By noon the San Luis Obispo Emergency Operations Center had called out the ARES and RACES operators, primarily supporting the Red Cross in opening shelters in Paso Robles and Oceana. Morrow Bay also had Red Cross shelters and we provided communications for the Red Cross because their cell phones just weren't functioning for the first 12 hours after the earthquake.

--

According to Griffin with cellphones down, another way to communicate was needed by emergency workers.  Enter ham radio volunteers.

--

K6YR:  "We had some come from as far as South county which includes Oceana, Nipomo, maybe even some from Santa Maria to help support the North county Paso Robles ARES area."

--

The city of Paso Robles was hardest hit.  Part of the historic downtown area was destroyed and two people were killed.   Griffin says that hams were on scene providing communications for about 24 hours.  When we spoke to K6YR some  were still there:

--

K6YR: " There are some Amateur operators still manning the county Emergency Operations Center. but my understanding is that the communications and support up at the Paso Robles Police Department has closed down for the timer being and it appears that the Red Cross has its communications which relies on cell phones back in operation."

--

The bottom line.  It took the cellular providers about 12 hours to get service back to most of the stricken area.  Meantime ham radio operators were there, doing what they do best.

For the Amateur Radio Newsline, I'm Burt Hicks, WB6MQV, reporting.

--

According to Cal Tech, Monday's temblor was the state's first deadly earthquake since the magnitude 6.7 shaker that hit Northridge California in 1994.  (ARNewsline(tm))

**

RESTRUCTURING:  VK TO GET REVISED AMATEUR RADIO SERVICE

Hams in Australia will soon have a restructured Amateur Radio Service. Some of the changes are coming soon  Others are still being negotiated. Q-News Graham Kemp, VK4BB, is here with the details:

--

As reported, the Australian Communications Authority has decided to discontinue the Morse code proficiency requirement for the amateur service.  The ACA will also remove the prohibition of third party communications to an amateur station in another country. If another country seeks a prohibition on such communications, this will be published and conveyed to the amateurs. To effect this decision, the ACA will need to amend the Radiocommunications Licence Conditions Determination No. 1 of 1997. Thats the Amateur LCD.

The ACA will directly inform the amateur community through established communication channels when the amendment has been made. The ACA will update the Amateur Internet Linking System consumer fact sheet to incorporate changes to third party communication arrangements.

The ACA will continue to impose limits on the purity and stability of emitted frequencies, and maximum power limits on amateur stations in accordance with the ITU's requirements for transmitting stations. The ITU requirements will be incorporated into the ACA's public information doments in early 2004 to ensure that they are available to amateur licensees.

The ACA will maintain current requirements for use of a callsign while operating an amateur station, as contained in sections 8, 37 and 44 of the Amateur LCD. The ACA is still considering whether to permit the abbreviation of callsigns during emergency services operations and training. A decision will be announced by mid-2004.

The ACA will proceed with the proposal for Australia to participate in European Conference of Postal and Telecommunications Administrations - CEPT. While liaison with CEPT about T/R 61-01 can commence immediately, the licensing arrangements necessary to implement this will not begin until mid-2004.

The ACA is working through submissions about the remaining proposals, including the licensing structure, and expects to announce decisions by mid 2004.

For the Amateur Radio Newsline, I'm Graham Kemp, VK4BB, of Q-News Australia.

--

Obviously for hams down-under, this is the start of something big. (Q-News)

**

Break 1

News never takes a holiday and neither do we. From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the K-9-K-E repeater serving Godfrey Illinois.

HAM RADIO EVENTS:  KID'S DAY IS SUNDAY JANUARY 4

Its one of the two most important ham radio holidays of the ham radio year and its only about a week away.  Of coarse we are talking about the first of two Kids Day operating events for 2004.

According to a recent ARRL Letter, the first Kid's Day of 2004 will occur on a Sunday.  Next Sunday, January the 4th.  And unlike most other on-the-air events, Kid's Day is not a contest.  Rather its a time when experienced hams open their hearts and their stations to invite kids in and put them on the air to experience the magic that is ham radio.

Kid's Day will run from 1800 to 2400 UTC, and there's no limit on operating time. The suggested exchange is a youngsters name, age, location and favorite color.  Most operation will be found on 14.270 to 14.300, 21.380 to 21.400 and 28.350 to 28.400 MHz and local 2 meter repeaters.

Guidelines for Kids Day are available at www.arrl.org/FandES/ead/kd-rules.htm.  And -- oh yes: If you miss this Kids Day operating event the next one won't take place until Saturday, June 19th.  (ARRL)

HAM RADIO EDUCATION: IARU CONGRATULATES NEW HAMS

A top IARU official has welcomed Albania's newly licensed hams to the hobby.  Bill Pasternak, WA6ITF, is here with more:

--

Ole Garpestadt, LA2RR, is IARU Region 1 Chairman. And while participating in the recent graduation ceremony for Project Goodwill Albania 2003, he took the time to congratulate the new Albanian licensees, and welcomed them to the bands.

Garpestadt credited the University of Triana and the program organizers with their success in conducting the training and succeeding in something that the IARU itself has had only limited results with.  It should be noted that LA2RR participated in final negotiations with Albanian authorities for their entry to CEPT and bringing the Albanian licensing regime into line with the rest of the CEPT world.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF

--

One final note on Project Goodwill Albania 2003.  Its organizer, the famed D-Xer Martti Laine, O-H-2-B-H, was awarded a "Senior Fellow of Polytechnic University of Tirana" at the graduation ceremony.  In his closing remarks Liane thanked everyone involved for what he termed as their five weeks of serious effort. (Via press release)

HAM RADIO EDUCATION: 2004 - 2005 FAR SCHOLARSHIPS OPEN

Meanwhile, here in the United States, it's ham radio scholarship time again. This, with word that Foundation for Amateur Radio is providing applications for hams to apply for the 59 awards that it will administer for the 2004 through 2005 academic.

Right now, the foundation is inviting Amateur Radio licensees planning to pursue a full-time course of study beyond high school, and who are either enrolled in or accepted for enrollment at an accredited university, college or technical school to compete for these scholarships. Awards range from $500 to $2500 with preference in some cases going to residents of specific geographic area or to those pursuing certain study programs.

The cutoff date is April 30, 2004. Application forms are available by mailing a request to FAR Scholarships, P.O. Box 831 Riverdale, Maryland. The Zipcode is 20738. (Foundation for Amateur Radio)

**

ELECTRONIC ASSISTANCE: REPAIRCLINIC.COM

A new Web site has been created to usher Americans away from their throwaway habits and into the world of yesteryear when we just kept it working.

Called RepairClinic.com, the cyberspac port provides aids for those looking to repair anything from a refrigerator or air conditioner to more complex devices such as microwave ovens. The site appears to derive most of its income by selling spare parts and factory manuals.

At the moment the site sticks to typical kitchen appliances. It does not provide advice on such items as radios, T-V sets, VCRs and other consumer electronics. At least, not yet. (Science Today)

**

RESCUE RADIO: THE LATEST TOWER TO COLLAPSE IS....

A 528 foot tower supporting antennas for WMGX and WYNZ in the Portland, Maine area collapsed on Thursday, December 11th. As reported on Scott Fybush's web site, the reason for the tower falling appears to be a guy wire that apparently snapped. The story, and a photo of the tower prior to collapse, can be seen at www.fybush.com/nerw.html Its not known if any ham radio repeaters shared this support structure. (CGC)

NAMES IN THE NEWS:  VE1MR NAMED RAC RADIO AMATEUR OF 2003

Bill Elliott, VE1MR, has been named to receive  the RAC Radio Amateur of the Year Award for 2003.  Currently President of Halifax Amateur Radio Club, Elliott has been a Radio Amateur and a member of Radio Amateurs of Canada and its predecessor national organizations for over twenty years. Through that time, VE1MR has consistently and generously donated his technical and organizational skills to significantly promoting excellence in Amateur Radio and facilitating its public service role.

For a complete story on VE1MR's activities and the contributions which qualified him for this prestigious award, see http://www.rac.ca/new/canada.htm (RAC)

**

NAMES IN THE NEWS:  JENNICAM GOING QRT

And, by the time you read this, Jennifer Ringley will have taken her famed jennicam.org webcam off the Internet and Q-R-T.  This, after 7 years of her permitting the world to watch her life through a cyberspace eye.

Ringley was 20 and a student at a Pennsylvania college when she installed a web camera in her room and launched jennicam.org.  That was in April of 1996 and over the years the cameras have followed her every movement 24 hours a day.

A self-described former computer geek who now lives in Northern California, Ringley has posted that her web cam was intended to be a fun way for her mom or friends to keep tabs on her.  Also, that it was an interesting use for the digital camera that she bought on a whim in the bookstore.

Now, the site has a notice saying it will be closing on December 31st. No reason is given and Ringley has not respond to e-mail query's from the press.  (Published news reports)

NEWSLINE NEWS:  MORE THANK YOU'S WITH N6TCQ

Ladies and gentlemen, we end this year and begin the next by saying thank you to more listeners who kept the Amateur Radio Newsline on the air throughout 2003. Here's Andy Jarema, N6TCQ:

--

This week we have the second half of our list of people who helped us financially in the month of April:

Linda Reeder of Salt Lake City, Vic Hartpence, W7RKU of Sparks, NV, The Puget Amateur Radio Society of Kirkland, WA, The Quarter Century Wireless Association of Eugene, OR'. Bill Alexander, KR6G of Quincy, CA, Leo Halog, KR6EG of San Fransisco, Mark Lunge and the MSARC N6MPX Repeater System, San Leandro, Monthly contributor William Walters, WA2IBM, of San Jose, Monthly contributor Scott Hensley of the Area Communications Team,  San Jose
SCATS, the Southern California Amateur Transmitting Society, in West Covina, Our good friend Dave Bell, W6AQ of Hollywood, And Newsline Staff volunteers who paid out-of-pocket to keep Newsline on the air.

Thank you to everyone.  Your April response to our crisis was exceptional, and we promise to do our best to continue to earn your care and support. A reminder that Newsline is a 501c 3 California non-profit corporation.  FCC regulations prohibit us from telling you exactly how to support us, but that information is on our website at www.arnewsline.org.  I'm Andy Jarema,
N6TCQ.

--

More from Andy in future Amateur Radio Newsline reports.

HAM RADIO AND SPACE:  THE MARS EXPRESS

An amazing space DX record for ham radio.  This as Charlie Suckling, G3WDG reports that he has successfully received the 'Mars Express' deep-space probe using his 3 meter dish antenna.

Mars Express has been on its way to the red planet since the 2nd of June and was  scheduled to arrive on Christmas Day.  The signal was earlier received on 8.4 GHz by James Miller, G-3-R-U-H, at the AMSAT D-L ground station in Bochum, Germany.  This, when the probe was 107 million kilometers away on November 16th.

Although traveling at the speed of light, the signal took about six minutes to reach earth.  The AMSAT D-L website has information on how amateurs can receive Mars Express.

The AMSAT-DL website  at www.amsat-dl/pa5/reception_g3ruh.htm provides information on how amateurs can receive Mars Express. (GB2RS)

**

HAM RADIO IN SPACE:  PC SAT UPDATE

AMSAT North America reports that P-C sat is doing fine and will continue in good sunlight through New Years Eve.  The satellite is seeing about 50 packet users per day and 30 per pass over the USA.

Anyone with a 2 meter transceiver and T-N-C can easily copy this bird. Just tune the radio to 145.825 and watch for 1200 baud normal AX.25 packet.  (AMSAT)

**

INTERNATIONAL-SWEDEN:  NO CODE ON JANUARY 1?

GB2RS reports that Sweden is likely to permit former CEPT Class 2 amateurs access to the High Frequency bands from the 1st of January. SM0SMK, the President of Swedish national amateur radio society has said that they hope the Morse code test requirement will be removed at the turn of the year.b  (RSGB)

**

INTERNATIONAL - UK:  NEW TRAINING PRESENTATIONS ON THE WEB

The Chelmsford Amateur Radio Society in Essex England has made all of its  Powerpoint slide presentations for the United Kingdom's Foundation and Intermediate courses available on the web.  Those who are interested in seeing what's involved in getting these new U-K licenses can download the slides from www.qsl.net/g0mwt  (M5AKA)

**

DX

In DX, the FMRE Sunday bulletin has announced that the X-F4 DXpedition to Socorro Island will begin March 3rd, and run for two weeks.  The call sign to be used is X-F-4-I-H.  8 operators from Mexico will be active all bands and modes including VHF, UHF and satellite.  No QSL information is available at this time.   (XE1KK, N4GN)

And S57CQ expects to be in Bhutan by the time you hear this newscast. He plans to spend as much of his spare time as possible active as A52Q. QSL as directed on the air.  (RSGB)

Lastly PA4WM will be in Turkey for six months, on a four week rotation schedule. He operates SSB, CW and RTTY as TA1/PA4WM with 100 watts into a G5RV.  He plans to upgrade his antennas with a vertical and receiving antenna for 160 and 80 meters at the earliest available time.  (GB2RS)

**

## THAT FINAL ITEM:  HEAVY METAL ON THE HAM BANDS

And finally this week, Heavy metal is back on the ham bands.  No, not the rock music kind.  We are talking heavy metal as in vintage AM gear. Paul Goodman, K2ORC, has more in this report filed over the air - using AM :

--

Sunset on December 27, 2003 will mark the kickoff of this year's Heavy Metal Rally. A showcase for AM transmitters that weigh at least 250 pounds and produce 250 watts or more, the annual event is sponsored by Electric Radio magazine.

The Rally has become a coast to coast highlight for many AM amateur stations in North America with activity on 160, 75 and 40 meters. The event goes all night, ending at sunrise on December 28

Participants who want to compete for the top place trophy submit logs to the event coordinator. Scoring for the Heavy Metal Rally utilizes a point system that takes into account, among other things, total number of contacts and the number of states and bands worked. In a departure from traditional contest-type scoring, a station can receive an extra point for each positive signal or audio report received by the event coordinator from other hams and SWLs.

Scoring notwithstanding, many AM fans participate in the Heavy Metal Rally simply for the pleasure of talking and listening to other AM stations with strong signals and outstanding audio.

Winter HF operating conditions generally lead to numerous coast to coast contacts featuring a diversity of transmitters. It would not be unusual for listeners to hear, an amateur in Colorado on a restored Gates broadcast transmitter chatting with someone in California running a Collins broadcast transmitter.

--
Contact Audio
--

While broadcast transmitters may be the first thing to come to mind when picturing equipment that meets the Heavy Metal weight and power criteria, the Rally also features a sizeable number of homebrew and military rigs. For more information on the 2003 Heavy Metal Rally, including the email address for log submissions and a list of suggested operating frequencies, please visit amfone.net -- that's alpha-mike-foxtrot-oscar-november-echo - dot - net.

Reporting for the Amateur Radio Newsline, this is Paul Goodman, K2ORC.

--

Sounds great, doesn't it!  You can hear more for yourself on Saturday evening December 27th overnight into Sunday the 28th on 160 and 75 meters. Its the 2003 Heavy Metal Rally on your radio to enjoy. (ARNewsline(tm))

**

NEWSCAST CLOSE

For this week and this year, that's all from the Amateur Radio Newsline. Our thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News for their assistance in producing this weeks report.

A reminder that our e-mail address is newsline@arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Jim Davis, W2JKD, saying 73, Happy New Year and we thank you for listening. Amateur Radio Newsline(tm) is Copyright 2003 and 2004. All rights are reserved.

> with the IBOC on, then a hearing check is in order.

The number of such radios pales when comparred to the number represented by more typical devices. I'll bet that in LA, the case in point, there are less than 2,000 of those radios. Who would buy a very expensive portable radio that promotes high AM quality as its selling point? Answer: talk show addicts who have a hard time hearing a local station.
>
> Mark my words... IBOC on AM will be a flop.  In addition to the
> horrendous interference, degraded analog audio, and artifact-laden
> digital audio, who would spend $500+ for an "HD Radio" setup, just to
> hear the same local stations,

The receivers will be below $100 within 12 months, if not sooner. the prices will track CD players and DVD players in price declines.

The fact that most radio listening is to local stations answers that question.

And I have heard AM IBOC and it sounds better than many highly compressed FMs I A/B'd with. The new algorithm is excellent.

On 99% of AM receivers, there is no analog degradation because the receivers are not wide enough to detect the difference.

> when XM or Sirius costs less than half
> as much and delivers 100 channels of new, exciting, and often
> commercial-free programming?

You forget that a full installation is not just the radio, but the installation and antenna. And then there is $10 to $13 a month in user fees, plus tax.

> And when the radio stations realize that
> consumers aren't going for it, who would spend the $75,000 - $100,000
> per station to convert to IBOC?

You are letting the cart get ahead of the horse. The CES is going to be filled with IBOC equipment, and I believe some at much more affordable prices.

> favorably of IBOC.  What is the world coming to?

1480 and even 930 are miserable signals. Both also roabably have high-Q antennas. On a good system, IBOC sounds good, and the analgo audio is indistinguishable from the "way it was before."

Many stations, especially those doing block, brokered programming, will not gain initially from IBOC. those with decent signals can gain a lot.

I'm asking about 96.5 FM-KYPT in Seattle. From around January 2000 until Monday December 22nd 2003, it was an 80s station called The Point. When it came online, there were  a few stations that had a mix of 70s, 80s, and more recent stuff, but after the others gradually shifted to other eras of music. At the end, it was virtually the only station in Seattle to have any 80s music at all, and the only one that was 100% 80s music. Now it is an alternative/hard rock station called K-ROCK. I personally don't think it's an improvement, as I dislike alternative music intensely. I'm OK with hard rock, but it's not worth dodging Nirvana and their copycats.

The station has never been very friendly in the customer relations department as far as letting listeners know what is going on. About a year and a half ago, they fired virtually their entire on-air staff one day in the middle of the week with absolutely no warning to the listeners or to the people who were getting the axe, I'm sure. When people tuned in for the morning show the next day, there were two guys who didn't know what the heck was going on fielding calls from confused and irate listeners, and their web site was suddenly down for several months 'for construction'. Their new web page at www.965thepoint.com continues this trend by being decidedly un-informative. I'm not asking why this station in particular changed format, but rather what factors may have prompted the change (for the worse, IMHO). The station is owned by Infinity Radio, which owns several other stations in the area, though they don't have a monopoly. Strangely enough, Infinity Radio owns another station in the same area that has classic rock (KZOK), so it would seem that the audience would overlap significantly.

It's rather saddening that the Seattle area will have no more free 80s music. It doesn't effect me as much, as my car stereo (where I do 95% of my radio listening) is Sirius satellite radio ready, and since they have an all 80s channel, I've decided to activate with them. Still, I will miss The Point's web site where they always had announcements about which 80s bands were coming to the area, and the contests they used to have to win tickets for the concerts.

My Audicy has been a privately run machine (not in a station).

It comes with:

The full manual with all install disks.
The latest version of software; Version 3.0
C-52 + EFX  plug-in processor card
192 MB RAM (52 minutes per production@ 32 kHz)
2.0 GB internal hard drive (Over 9 hours of recording time.)
SCSI Card for additional external drives.
Digital I/O module with AES/EBU, S/PDIF and wordclock.
25 foot extender cables for CRT, keyboard, and Audicy controller console.
SMPTE card.

$8k

> than 2,000 of those radios. Who would buy a very expensive portable radio

Most of the AM radios I encounter are 10 dollar no-brand (or one shot brand) portables that you're lucky if they can pick up three of the stronger stations in your market all across the dial.  Hell, I saw one in a store that was only able to pick up one station no matter how much I turned the tuning dial -- it was AM 66 WFAN all the way from 5.4 to 16 and nothing else.

Yes I hear the hiss and crap on my Superadio and on a lot of other hi-fi radios I have in the house... but let's get real...who aside from us radio geeks listens to AM on something like that?  Most people are just using a cheapie clock radio for news in the morning (if that) -- car radio for news on the commute and maybe the odd ball game.

And before you think I like IBOC, I am actually gunning for its failure.  I hate it.  It makes my radios sound like garbage during the day.

But if doesn't fail (and it won't)...hey guess what...that's why I have a little 100 milliwatt part 15 rig set up to re-lay the Music Choice channels on my cable TV for my apartment.

I meant Spanish pop oldies... :)

Univision does have three stations that I can name off the top of my head
that do an oldies-format in Spanish: Los Angeles, Las Vegas and recently
Chicago's AM 56 WIND changed to oldies from talk.

I'd dig it if WADO dropped the lame talk shows and infomercials and went
music. Maybe they'd get a little uptick in the ratings...

> The number of such radios pales when comparred to the number represented by
> more typical devices.

Allowing IBOC to take advantage of the weaknesses of "typical" AM receivers in order to cover up its faults is akin to contructing a waterfront building according to the parameters of a "typical" hurricane.  Or, it's like manufacturing a car whose lifespan is only 80,000 miles because the "typical" driver only keeps it that long.

For years, the complaints about AM radio have been interference and poor audio quality.  Now, IBOC comes along and in order to "solve" these problems, it _purposely_ transmits additional interference and _purposely_ degrades the audio quality even further.  Where is the sense in that!?

> The receivers will be below $100 within 12 months, if not sooner. the prices
> will track CD players and DVD players in price declines.

But the prices for IBOC receivers -- if they ever arrive -- will not be competitive with that of analog radios... just like digital TVs still cost a lot more than comparable analog sets, half a decade after their introduction.

> The fact that most radio listening is to local stations answers that
> question.

Another hypocritical answer.  For years, engineers like yourself have complained about the loss of coverage area that FM Stereo and AM Stereo allegedly cause.  Many stations on both bands have discontinued stereo broadcasts, just to squeak a few more miles out of their fringe coverage.  But now, suddenly that doesn't matter anymore?  Now, with IBOC, listeners outside the primary coverage area are suddenly of no importance?

But you just wait... once mutual IBOC interference from an adjacent station comes back to bite these stations in the butt, suddenly _then_ they will start complaining about it.  It's like a guy who lets his dog shit all over his neighbor's property and doesn't care about it -- but once somebody else's dog comes and shits on his _own_ front lawn, then he suddenly is concerned about it.

> And I have heard AM IBOC and it sounds better than many highly compressed FMs I A/B'd with. The new algorithm is excellent.

Yeah, if you like digital aliasing artifacts screeching in your ears. The "spectrally replicated" treble response of AM IBOC is akin to fingernails scratching a chalkboard. A few weeks ago, I listened to XM for about 2 hours in a coworker's car, and the screechy fake treble actually gave me a headache -- and that's with a bitrate nearly twice as high as AM IBOC. The only way I could live with either IBOC or XM is if I turned the treble control all the way down.

> On 99% of AM receivers, there is no analog degradation because the receivers are not wide enough to detect the difference.

Not quite... the NRSC tested four receivers which are supposed to be the most representative of "typical" AM radios. Only one of the radios (a Delphi car radio) was narrowband enough to not exhibit any degradation. But the three others did have degraded audio with IBOC in use, the worst being a Sony boombox. iBiquity's excuse for this was that according to their testing, the degradation wasn't bad enough that it would cause most listeners to change the station. But the point is, according to the NRSC tests, 3/4ths of today's most popular radios _will_ have degraded audio when AM IBOC is in use.

> You are letting the cart get ahead of the horse. The CES is going to be filled with IBOC equipment, and I believe some at much more affordable prices.

Yeah, like B.E.'s IBOC exciter, with a list price of over $22,000... that's a steal!

> 1480 and even 930 are miserable signals. Both also roabably have high-Q antennas. On a good system, IBOC sounds good, and the analgo audio is indistinguishable from the "way it was before."
>
> Many stations, especially those doing block, brokered programming, will not gain initially from IBOC. those with decent signals can gain a lot.

Ah, equality at its best... the big 50 kW stations can enjoy "digital" reception for their local listeners, no matter how much they hash all over the band, while the smaller stations get the short shrift, and may not even be able to use IBOC at all.

Case in point... 1530 WSAI. When they're transmitting IBOC at night (as they have been constantly), the "hash" to adjacent channels is so bad, it can even be heard on the _studio monitor_ of a neighboring station, 1520 WKWH in Shelbyville, IN.

Hello!,

My name is Ray and I'm making an online list of every oldies song that
station (Majic) 102.7 is playing during their History of Rock & Roll
from A-Z marathon. Take a look at it and see if you can help me finish
it off. If you know any of the songs I'm missing (and trust me there's
a couple) you can post them here at the group or you can e-mail me
(the address is on the site). As a matter a fact, here's the site...

http://www.angelfire.com/games5/eyeremember/oldieslist.html

Thanks for helping,
Ray

Mostly back catalog stuff from big late 70s/early 80s A/C pop artists like Julio Iglesias, Camilo Sesto, Braulio.  Also stuff from Celia Cruz, Roberto Ledesma, Trio Los Condes, Los Panchos, Los Angeles Negros, etc.

No Xavier Cugat, Augustin Magaldi or other really classic stuff like that - demos are probably too old for those.

I haven't had a chance to hear much of it since by the time I'm out of work the show is over (at 7 p.m.).  No AM reception in my office building unless you are standing next to a window or an interior steel structural support.

Las Vegas and LA are Mexican 60's oldies. Chicago is more international 70's oldies.

NY would be caribbean-flavored oldies.

Good point. I still wouldn't mind however. There was lots of great old stuff made during the 50s, 60s and 70s. And some of it continues to appeal to all age groups even today -- Ray Barreto, Celia Cruz, Richie Ray and Bobby Cruz to name a few

<snip>

I was driving from my home in Temecula, CA to visit family in the
Central Valley and listened to KNX (You can only get KFMB(FM) for so
far, and my KIIS(FM) tolerances aren't what they were a few years
back...) on Christmas day, and I was a bit suprised... I was expecting
some tape/automation, but it seemed entirely live
(news/traffic/weather) with fairly framiliar voices, but then at 13:00
+/- an hour or so they went to a two hour "highlights of the moon
landing" thing that was quite enjoyable -- even though the landing was
15 years before I was born.

Unfourtinately, I lost KNX at the top of the grapevine, so I missed
the last :45 or so ... if there's a copy somewhere on the web, I would
appreciate a pointer (Preferred email: abuse _at_ lincoln _dot_ homeip
_dot_ net)

Happy Holidays!

Lincoln

And you'll probably be happy to know that WADO has finally killed their Kahn POWER-Side... perhaps because its inherent distortion and telephone-like audio doesn't sound too good with music.

Meanwhile, 1600 WWRL is still transmitting POWER-Side, although I don't think they are putting out a 15 Hz Kahn AM Stereo pilot tone, like WADO was.

And if WADO wants to play more music than news/talk, that's fine by me.  The skywaves are strong enough this season that almost every night, I can get "Radio Reloj" from Cuba quite clearly on 570 kHz, coming in right on top of local WMCA.

The typical AM receiver can not tell the difference between the reduced
IBOC-mandated analog bandwidth and a full NRSC bandwidth. In fact, I fidn
that the reduced transmitted bandwidth sounds better on many radios than
wider bandwidth.

There are 700 million radios out there; most all of them have crummy AM
response.

IBOC offers a future improvement to AM and FM.
>

It does not degrade analog FM at all; on AM I feel the degradation looks bad
on paper, but in reality it is insignificant and may be an improvment.

The said the same thing about CD players, VHS players and DVD players. I
paid over $700 for my first VHS; $1200 for my first CD player. And the tapes
and CDs were very expensive to start.
>
> > The fact that most radio listening is to local stations answers that

> complained about the loss of coverage area that FM Stereo and AM
> Stereo allegedly cause.

I don't. FM stero may cause more multipath in some areas, but very very few FMs are mono. AM stereo sucks. There are reasons beyond coverage (which is not generally affected per se) that doomed that system... most in the hands of the FCC.

>  Many stations on both bands have discontinued
> stereo broadcasts, just to squeak a few more miles out of their fringe
> coverage.

In the case of FM, this is mostly with low powered stations and very few of them.

In AM, it is because the system never took off, as AM was already dead for music and fidelity when the FCC finally mandated one system.

>  But now, suddenly that doesn't matter anymore?  Now, with
> IBOC, listeners outside the primary coverage area are suddenly of no
> importance?

Listeners outside the metro are do not afford most stations any opportunity for extra revenue. I am with two Los Angeles stations that are generally in the top 10 in Riverside, a separate market. That coverage and audience is of no value at all; it gets no revenue,k it is too far away to become involved with and not useful.
>
> But you just wait... once mutual IBOC interference from an adjacent

> then he suddenly is concerned about it.

About 90% of FM listening is in the 70 dbu contour; in metros, the 10 mv/m contour on AMs holds most of the listeners. Most Ams today don't put a 10 over the entire market, and are generally crippled from the start.
>

XM and IBOC have different systems.

> that it would cause most listeners to change the station.

We tested with a bunch or receivers, rnging from clock radios to boom boxes
to walma n type devices. None of us could tell any significant difference in
A/B testing. By the way, the NRSC test you refer to was before the revised
IBOC algorithm and not necessarily on a station with a wide bandwidth
antenna system.

> But the
> point is, according to the NRSC tests, 3/4ths of today's most popular
> radios _will_ have degraded audio when AM IBOC is in use.

Near 3 weeks of operation, not one listener comment on the analog signal.
>

> that's a steal!

That is actually pretty reasonable as broadcast gear goes. An Optimod or an
Omnia are in the 10 k range... good equipment is costly... our last morning
show boards cost around $80 thousand each.
>
> > Many stations, especially those doing block, brokered programming, will

No, they may not. They are brokered or ethnic because they can not compete
on signal alone. So they specialize. No one asked them to file for
insufficient facilities, or not to upgrade in time as markets grew.
>
> Case in point... 1530 WSAI.  When they're transmitting IBOC at night
> (as they have been constantly), the "hash" to adjacent channels is so
> bad, it can even be heard on the _studio monitor_ of a neighboring

> station, 1520 WKWH in Shelbyville, IN.

Does WKWH have its studio inside its interference free night contour? Many AMs have studios in locations where the night signal is unlistenable. And WSAI is direcitonal at night, protecting Sacramento. Of course, WKWH only has 250 watts at night.

IBOC can only be run 6 AM to 6 PM or sunrise to sunset, whihever is greater.

Any experiments were to determne the insertion level for IBOC for porposed night operation.

```

For sale:

Part ownership in 1 KW fulltime AM in small Arkansas market. College town in area.

Joint venture. Active or inactive investors with at least $10,000 each are welcome. Full price expected to be about $100,000. Transmitter/tower land included. Studios rent for $350.00 per month.

No investor may own over 49 percent. This goes for me too!

I am NOT repeat NOT an agent, broker, shill, owner or part owner. I am also NOT a crook!

Please! No "AM bashers" or other negative nabobs!

Tel: (478)741-1710 in Macon, GA.

73,

Meyer Gottesman, W6GIV
aka "The Radio Crazy"

And why would "filtered" news form Cuba, listenable only at night under
occasional atmospheric conditions, be better than regulr hourly casts on a
local NY station?

Okay, what is the frequency and call of the French-language station in Brooklyn?   I can't even remember if it's AM or FM but it had some very fine music the last time I was in town.

I wonder if they probably tore that thing out when they rebuilt the
transmitter facility a few years back.

You keep adding so much crap in the air chain it does have an effect on
the sound you put out.  Please keep the amount of boxes to a necessary
minimum.

No C-Quam boxes, no Powerside, no IBOC; just a properly adjusted
compressor/limiter and a transmitter should be all that should be there.

Tell me about it.  ALthough those of us with the occasional hi-fi AM radio would like to hear something resembling hi-fi.  And it wouldn't be all that out of the way for the broadcaster to do.

I thought the whole idea was to put out the best audio quality you could to make the crappy radios sound the best they can.  I still don't see how IBOC helps the ANALOG signal.

It's funny...that to listen to AM I now have to look for the crappiest radio I have instead of the best radio so that I don't hear the hiss, the clipping and the hash if the radio drifts out of tune...

No, it was on the air until a few months ago. The CE actually likes it.

Someone was looking for a Media Broadcast
set of tools to increase audience size
and reach. This year-round product could
help you build up internet traffic and build
up your repeat sticky visitors to your Sports
Talk Shows your Sports News Show and others, too.

You could offer your listeners a Daily $25,000
to $50,000 Grand Prize for ANY Perfect Pool Slate

with 8 or more games, 350 days of the year using this product and it would be an INSURED Grand Prize, too. This can be licensed as a local market EXCLUSIVE as well.

Take a look at Sports Pool Selection System (SPSS) instead of the current system that is being used at present for your listeners. We already have the NFL and the NBA feeds and Schedules and Spreads running now and we will be adding College Hoops (Q1-2004),Major League Baseball (Q2-2004),and then College Football (Q3-2004). This will provide year round excitement for your listeners and multiple sponsorship opportunities for your advertisers which can convert to advertising dollars for you.

http://www.21stCenturyInc.com/NBA (Beta Test Site)

It also occurred to me that this could be a great opportunity for your sales department if you licensed the software from us directly and then relicensed it to your advertisers selectively or gave it away in return for a commitment to year round advertising to provide them with year round Sports Pools which can be localized for single establishments.

Each Bar & Grill can form an All-Star Team, enter their picks every day, all year long, and every day there will be a consensus Individual Winner and Team winner for the highest percentage of correct coices within the Score listening radius. NFL Pools, NBA Pools, NCAA Hoops Tourneys, MLB Pools using Run Differentials, NHL Pools using Goal Differentials, etc.

Our other main advantage includes the fact that we also provide a product with more excitement and with more skill involved since we calculate results based on up-to-the-minute "Consensus Betting Spreads" and we also provide an Over/Under choice for every contest every day, as well.

It also occurred to me that we have so may obvious advantages over UPickEm that even local Sports Bars and Grills would be very favorably inclined towards installing the SPSS system using either on-site internet kiosques at their establishments with overhead monitors or just by granting internet access to the URLs we host for them to provide these Sports Selection Pools. Alternatively employees could distribute entry sheets at the establishments and then someone in the back office could enter their picks.

http://www.21stCenturyInc.com/NBA

For the Sports Bar or Restaurant owner, this accomplishes several things:

1) It creates a sticky site phenomenon to encourage returning patrons either to their website or to their on premises locations where different prizes and contests could be run based on whether or not you are present at the Sports Bar and whether or not you are present at the end of the night when the last game is over.

2) Since the odds of getting a full slate of 8 games correct against the spread and also getting 8 over/unders correct on the same slate are so high (1 in 64,000) the Grand Prizes offered (covered by insurance) could probably be worth as much as $64,000 as well. Even the Dolphins did not go 17-0 Against the Spread in 1972, so in fact the odds are truly very high.

3) Minor prizes for the Best Slate per Location could be determined by the local bar owners, and you could consider providing the Grand Prize on a daily basis for the best Individual Slates and the Overall Team Champion among establishments. McCulligan's vs. Hooter's vs. Joe's Upstairs or whatever. The XYZ Jocks vs. the ABC Jocks vs. the PDQ Jocks, any groups, any teams and any contests that patrons want to set up. And you could almost broadcast the leader board real time and on line to add to the excitement. Until an individual game has begun anyone can go into the Bar and add the balance of a slate in real-time or they can log into the website, join the Hooter's Team or the Finnegan's Team and make their online picks, too.

Our Pools are specific to a League right now, but we may add the concept of a blended or hybrid pool if there is enough demand for it. Really skillful players can pick the 10 games from any sport where they think they really have an insight into the accuracy of the spreads and the over/unders.

Other licensing options would include granting you the master license for your local listeners and advertisers and letting you resell the advertising and the licenses to other establishments within your geographical territory on either an exclusive or non-exlusive basis.

We can discuss the terms after you have tried out the system, which is still undergoing some enhancements and further debugging at:

http://www.21stCenturyInc.com/NBA is one for example.

The NBA standings displayed have been calculated for part of the season without the spread and for part of the season AFTER including the spread so the numbers will look a little weird in test mode. It also includes some exhibition games as well, so do not be concerned. During 2004 we will publish BOTH standings separately.

jfbevilaqua@21stCenturyInc.com

Regards and Happy New Year,
John Bevilaqua
President
21st Century Systems, Inc.

> The typical AM receiver can not tell the difference between the reduced

> IBOC-mandated analog bandwidth and a full NRSC bandwidth. In fact, I fidn
> that the reduced transmitted bandwidth sounds better on many radios than
> wider bandwidth.

It depends on how strongly the station is pushing their audio processing and pre-emphasis. With moderate processing, like a European shortwave station, you only notice the lack of high frequencies. But with "make-your-ears-bleed" processing and pre-emphasis pushed to the max, like what 710 WOR uses, that brick-wall filter at 5 kHz can cause some very nasty "ringing" distortion which becomes audible on receivers of any bandwidth. For example, take a listen to how bad WOR sounds on their own modulation monitor -- their analog audio is filled with ringing distortion, and that's it's been ever since they started using IBOC....

http://www.wor710.com/Engineering/iboc/wor_mod_mon.wav

> There are 700 million radios out there; most all of them have crummy AM
> response.

Yes, but if we always catered to the lowest common denominator, then there would be no such thing as a sports car, McDonald's would be considered fine dining, Emerson and Realistic would be the leading brands of "high-end audio", and George W. Bush would be President (oh, wait -- scratch that one).

> It does not degrade analog FM at all; on AM I feel the degradation looks bad
> on paper, but in reality it is insignificant and may be an improvment.

Well, imagine if all the Class C "graveyard channel" stations started using IBOC -- would the mutually assured destruction caused by that be "insignificant"?

> The said the same thing about CD players, VHS players and DVD players. I
> paid over $700 for my first VHS; $1200 for my first CD player. And the tapes
> and CDs were very expensive to start.

But CDs still cost more than cassettes, even though they are far cheaper to manufacture. And don't expect an HD Radio Walkman any time soon -- the battery drain is far too high to useable on the typical pair of AA cells.

> Listeners outside the metro are do not afford most stations any opportunity
> for extra revenue.

Many areas of the country rely upon fringe-area reception to have any AM/FM radio at all. I'm very close to one such area -- central NJ, which is halfway between NYC and Philly and thus almost every adjacent FM channel is occupied with a signal that is "non-local" but is listenable. Now that NYC's 102.7 WNEW has begun using IBOC, in some areas all you hear on 102.5 and 102.9 is a constant white-noise hiss, much to the consternation of any fringe-area listeners of Philly's 102.9 WMGK.

> I am listening daily to an LA music AM in IBOC digital and the audio is crisp, nice, clear, and very listenable. It is nothing like you say.

Well then, I invite you to listen to WOR's audio samples, made with the new "HDC" codec -- spectrum analysis reveals that all audio above 5 kHz is artificially created using "spectral replication". Even WOR's engineers admit that this sometimes causes the digital audio to sound "shredded", due to the incorrectly reproduced treble harmonics.....

http://www.wor710.com/Engineering/iboc/audio_samples.htm

> XM and IBOC have different systems.

Both use AACplus with Spectral Band Replication. XM uses it at a claimed average of 64 kbps for music channels, while IBOC-AM is 36 kbps for stereo mode and 20 kbps for mono mode, and IBOC-FM is at either 64 or 96 kbps -- which is still far from the claimed "CD-quality" sound.

> We tested with a bunch or receivers, rnging from clock radios to boom boxes to walma n type devices. None of us could tell any significant difference in A/B testing.

Next time you are in NYC, switch between 710 WOR and 770 WABC, even on the crappiest, most narrow-bandwidth AM radio you can find. WOR's IBOC signal might sound "okay", but once you switch to WABC, the difference in clarity is immediately noticeable. Due to their maxed-out audio processing, WOR may be "louder", but WABC sounds a whole lot cleaner.

> Near 3 weeks of operation, not one listener comment on the analog signal.

WOR listeners have complained to the _electric company_, thinking that the IBOC "hash" surrounding their signal was power line interference. And most listeners never call a radio station for any reason. Many times when a station is off the air, is transmitting dead air, or has other obvious problems, nobody calls.

> Any experiments were to determne the insertion level for IBOC for porposed night operation.

Regardless of the purpose, WSAI shouldn't be transmitting IBOC at night -- their STA to do so expired back in September, and the FCC database shows no record of a renewal. WSAI is not properly marked in the database as a hybrid digital station, either.

And good luck airing any New Year's celebration on an IBOC station -- unless you kill the analog delay, the count-down to midnight will be about 8� seconds late.

It does not help. However, it does appear from observation that _reducing_ the bandwidth to the IBOC analog requirement makes the majority of the narrowband AM receivers out there sound better. By not transmitting anything outside the passband of the receivers or which is at the downslope region may actually make the audio better. Otherwise, you are pushing bouleders through a funnel.

> overlap significantly.

In looking at the latest ratings from R&R, the station was the lowest-rated FM in Infinity's Seattle cluster and had pretty much stayed in the 2 area.  Even though The End's ratings have been going down, Infinity decided that there was still an audience for modern rock--particularly in Nirvana and Pearl Jam's hometown--that could be lured away from The End.  And so Seattle now has a modern rock format war raging.  Also, the all-80s format's been dying out nationwide for some time now.

I can understand why you're unhappy with the format changes, but the nature of the business is such that most of the station owners don't often want to tip their hands.  Also, in the case of low-rated formats like all-80s with an extremely loyal audience, they'd rather immediately flip the format and get it over with rather than announce the flip and risk backlash and campaigns to stop the switch.  In the end, Infinity thought that modern rock would do better for them than all-80s.  It may be disheartening to you, but that's the biz.

Because Invinity needed to do someting.
It's all about the money.
80's music has no listener appeal.

Ron

I would like to know if anyone out there is acquainted with the son and daughter of Two Ton (Dick) Baker, a radio entertainer in Chicago in the 1940s. His son's name was Richard Jr. and he would presently be about 64 years old. Please write with any information to cdawson321@att.net. Thank you, all!

alt.radio.broadcasting:1116

Sirius is terrific, but choosing a receiver or a service on the basis of the band-readiness of your car stereo is a bad idea from the previous generation of satellite radio equipment.  You'll get more enjoyment from a Plug 'n Play unit that lets you take the music from home to car to office.  "XM-ready" or "Sirius-ready" car stereos are ready only for a satellite-tuner of the same make as the car stereo, one that limits your subscription to the vehicle.  With luck your receiver has auxiliary input, or perhaps the Sirius jack or the CD changer jack can be deployed as an aux.  Otherwise, PnP's work through the cassette deck or through FM modulation, and there will be an appreciable hit in sound quality compared to the car-dedicated unit you have planned for.

Suggestion: ask around at the "Install Garage" area at www.siriusbackstage.com .

Jerome

Because it's a good indication of when skywave propagation from the
Caribbean is strong.  When Radio Reloj kocks out your local station, you
know it's time to tune in the Cuban station on 530 for live salsa
broadcasts, or tune to 4VEH for musique Zouk.

The "Radio Meshuga", it is loose!!!!

For sale: Partial ownership in nice little 1 KW full-time AM in Arkansas in college town.

Full price expected to be about $100,000.

Joint venture. (If you venture, you go to the joint! Hi!)

Active or inactive investors with at least $10,000 each are welcome. All investors would be on the board with full voting rights if desired.

No individual would be allowed more than 49 percent. This goes for me too!

I am NOT a broker, agent, shill, owner or part owner. May I add (sarcastic evil leer!)also that despite the hints from detractors, flamers, etc., that I am not a crook!

Station is on the air since 1987. Transmitter land is included and studios rent for $350.00 a month.

You can talk to the "Radio Meshuga" at: (478)741-1710 in Macon, GA or of course email: wrecktech@yahoo.com

Please do not annoy my parole officer!

73,

Meyer Gottesman, W6GIV
aka "The Radio Crazy"
aka "Der Radio Meshuga"

There is no Cuban station on 530. Never has been. There is very little live
music on Cuban stations any more.

> or tune to 4VEH for musique Zouk.

4VEH is a very hard catch, and is mostly religious. It has not been an easy
DX for 2 decades since it moved off of 1035 and reduced power.

> It does not help. However, it does appear from observation that _reducing_ the bandwidth to the IBOC analog requirement makes the majority of the narrowband AM receivers out there sound better.

"Sound better" by whose judgement?  That of iBiquity supporters? People who leave their radio's treble knob turned all the way down (and yes, I've encountered numerous people who do that)?

The engineers at 710 WOR discovered that a 6 kHz audio cut-off sounds far better than 5 kHz, even on narrowband receivers -- and the experience of myself and many other listeners supports that as well. But, iBiquity won't let them use it, because it doesn't meet the IBOC system spec.

But WOR does switch their audio to 6 kHz at sunset when the IBOC sidebands are turned off, and on the average cheap radio, the difference is subtle, but unmistakable.  If you try to process an Optimod 9200 too heavily when its 5 kHz filter is in use, you get a very nasty-sounding "ringing" distortion.  But when you switch the 9200 to its 6 kHz filter (which actually has its cut-off at about 6.25 kHz), this problem disappears and that extra kHz's worth of audio response provides a significant improvement in crispness and clarity.

If AM stations really think that nobody is listening to them with hi-fi receivers, then I would accept a 6 kHz cut-off.  That's what AM stations in the U.K. are using, and while it's definitely not hi-fi or even mid-fi, it does sound alright.  But not 5 kHz -- on an Optimod 9200, the distortion is intolerable, and on other processors, you're still left with very dull-sounding audio.

I used to hear mostly music on 640 out of Havana (CMQ?)

However, the last time I was anywhere near Cuba (Puerto Rico in late
2001), I couldn't hear anything from Cuba, on any frequency. Not even
a Radio Reloj clock tick....(Venezuela, on the other hand....)

I have a 4VEH QSL, back from 1979 (of course this was when they were
on shortwave). Mostly block religious programming from the States, if
I recall correctly (and no, I didn't hear Haiti on MW from P.R. either)

I'm sure satellite radio is great for tunes on the road but once locked into
Sirius or equiv how are you warned
that the road ahead is blocked by an overturned sewerage sludge carrier ?
Listen to channel 19 on the old CB radio ??? <lol>

No, actually. By a bunch of people who work at a station of different ages and both men and women. Each listend to an a ssortment of typical analog receivers as the IBOC and analog was A/B switched. We are talking about average consumer radios. And there were as many who liked the narrower bandwidth as those who like the NRSC bandwidth; most did nt hear any difference.

> But WOR does switch their audio to 6 kHz at sunset when the IBOC sidebands are turned off, and on the average cheap radio, the difference is subtle, but unmistakable.  If you try to process an Optimod 9200 too heavily when its 5 kHz filter is in use, you get a very nasty-sounding "ringing" distortion.  But when you switch the 9200 to its 6 kHz filter (which actually has its cut-off at about 6.25 kHz), this problem disappears and that extra kHz's worth of audio response provides a significant improvement in crispness and clarity.

Proving it pays to have a good engineer. Nothing else.

> If AM stations really think that nobody is listening to them with hi-fi receivers, then I would accept a 6 kHz cut-off.  That's what AM stations in the U.K. are using, and while it's definitely not hi-fi or even mid-fi, it does sound alright.  But not 5 kHz -- on an Optimod 9200, the distortion is intolerable, and on other processors, you're still left with very dull-sounding audio.

It just takes different adjustments. And on most receivers, by test, indistinguishable.

C'mon, Sven, you know more boxes means better sound. A syndicator in the 70s created a magic box whose innards were so secret they were hermetically sealed. Everyone agreed it made a dramatic improvement in the sound if you installed the box and removed all other processing, except a limiter.

Someone committed a crime nearly as serious as ripping the do not remove label off a mattress and opened the box, broke apart the sealant and discovered two wires that connected the input to the output. I think the AC supply simply lit a pilot light.

Its only purpose was to inspire the removal of all the smashers and mashers in the line.

Rich

That's when you'll see all hell break loose - when major market 50kw
stations find the 1kw stations stealing their salable near fringe
signals.

>But CDs still cost more than cassettes, even though they are far

It's difficult enough to listen to a highly processed signal in
headsets. I can only imagine the torture we'd endure with IBOC.

Actually, the calls generally come from the owner who insists that the
station make an announcement that they're off the air.

Also for your collection: Valerie pre-Dallas at KXAN Austin where I worked same time, she was doing a live report showing how to place condoms on bananas, live and in full living colors...

But seeing her freeze, drooling in the cold was a hoot for those of us at KXAS in Dallas.

Searched my stack, can't find either, more stuff lost in the move back to Austin

Certainly not in my experience!  The stations I've heard running IBOC sound noticeably inferior to those not running it, even on a narrowband receiver.   It also seems to me that the interference issues are not trivial, and interference from IBOC does affect  the primary service areas of adjacent channel stations, at least in some cases.  And the whole nighttime issue is a major problem.

Let's face it -- AM IBOC is a kludge.  It's a very technically impressive kludge, but a kludge nonetheless.  It creates bigger problems than it solves.  If AM can't survive without this, then AM probably can't survive.  And maybe in the 21st century, it shouldn't. Maybe we're trying to make a horse-and-buggy compete with the automobile by putting the horse on steroids.  It won't make the horse fast enough, and it will be harmful to his health.

Next time I'm in L.A. I'll have to check out KTNQ.  However, the Delco AM stereo tuner in my car  is not narrowband.

I don't see anything in the regulations that specifically says that's an
illegal practice.  It's very hard to believe the FCC doesn't know that
it happens, but I don't know of them ever citing anyone for it.

One would suppose you'd have to be reasonably careful to not pick "fake
calls" that could be confused with another station in the market.  I
wouldn't call myself "WHOT-FM" if I ran a station in Warren, Ohio - if I
were in Manchester, New Hampshire I might think differently..

The one in Sarasota, at least, has quit doing that.  I was back there
a couple of weeks ago and they were ID'ing under their own calls,
which my senile mind has already forgotten.  Grant Hudson of CKLW fame

was anchoring morning news -- I do remember that much. (and he was
sounding rather subdued, compared to the old days, but the voice was
still recognizable).

Showing what an old fart I really am,
Mark Howell

Agreed.  Case in point --

http://rronline.com/Subscribers/Ratings/Homepage.htm and select Milwaukee, WI.

Number one rated station, and resoundingly so, is an AM.

Anyone have an opinion?

Seems the first year people did this....we all watched with interest.

Last year, it was evident that this was a ratings boost.

THIS year, it seems like overkill.....as people hopped on the bandwagon.

Thoughts?

Me

Part of it is to get 2 quarter hours before listeners tune away. In the case of the limited number of breaks, "research has shown" that listeners are more aware of the number of elements than they are of their length. A :60 is perceived the same as a :30. Each is an element.

The hope is that listeners will perceive fewer elements in a limited number of breaks than they would with more breaks with fewer spots.

When the breaks were 5 minutes it was tolerable. Now that the spots seem to outnumber the songs, listeners are wearing out their radio's presets. Especially young listeners. I have a couple of my young nieces and nephews visiting. Not only do they change stations when a single song they don't like plays, they immediately change stations when a break begins. I thank MTV for creating generations with 3 second attention spans.

I asked why. They said "it'll be a long time before the music starts again."

That's not something a programmer wants to hear.

Both radio and TV are so riddled with clutter that it amazes me anyone stays tuned. Listen to your favorite station for an hour. Write down every time a new element begins. Music, news, spots, promos, jingles and jock chatter each constitutes an element.

TV has taken clutter to awesome heights, both aural and visual. Vitually every channel has a "bug" supered over all but commercials. Annoying as hell. During shows there's a crawl or a super about an upcoming show. Crawls used to be used only for emergency information. I can only imagine the anger of a movie director when he sees his masterpiece splattered with material that destroys the mood he tried to create. Often one super overlaps another.

Rich

An old friend of mine, who was a station owner for many years, has
retired, but just couldn't help himself being out of broadcasting.
So, he got a LPFM license WSHG-LP and spent $70K putting up a nice
little station run by volunteers in his hometown, St George, SC, much
to the big boys' dismay.....

Wonder if he's in anybody's rating book?  Anybody you ask in town will
tell you they're listening to it, just because it's a RADIO STATION,
not a continuous advertisement.....

Well, back to 30-in-a-row.  Wish we had one in Charleston.

True, though look at the rest of that list for Milwaukee.  80% of the top-10 stations are FM.  Only 53% of all radio stations (not counting non-commercial) in the Milwaukee market are FM.  There's a lot of AM stations being left out.

A similar situation exists in other markets.  In many (14 of the top 35) markets, an AM station is #1.  However, in 11 of the top 35 the top-ranked AM station is the ONLY AM in the top 10, and in no market are there more than three AMs in the top 10.  (unless you count the AM side of an AM/FM simulcast)

I guess the point is, an AM station can be successful but ONLY if it has the signal to fully cover the market.  The vast majority don't.

For sale:

Partial ownership in 1 KW full-time AM in Arkansas.

(The "Radio Crazy" is baaaaaaaaak!!!)

Joint venture. Active or inactive investors with at least $10,000 each are welcome. The first investor may put in as little as $5,000 and will be rewarded with extra stock for being a risk-taker. No infividual may own over 49 percent. This rule applies to me.

Transmitter/tower real estate is included. Studios rent for $350.00 a month.

About 30,000 population in the strong signal area. A 4 year college is in the area. (Same city where studios are).

I am NOT a broker, agent, shill, owner or part owner.

Only those fully identifying themselves will be given city of license and callsign.

Please! No "AM bashers" or other negative nabobs.

Tel: (478)741-1710 in Macon, GA.

73,

Meyer Gottesman, W6GIV
aka "The Radio Crazy"

That is exactly the issue. There are markets where only one or two AMs fully
cover the Arbitron survey area, others with none.

Look at a few examples: Houston, maybe 2 AMs, 610 and 740 cover the whole
market. Washington, DC: no AM fully covers metro. Cleveland: 3 AMs cover
daytime, two at night. Miami/Ft Lauderdale... maybe 2 (560 and 610) cover
day and night.

On the other hand, markets like San Francisco have multiple good AM signals,
and 3 to 4 AMs in the top 10 consistently. NY is similar, with WABC, WINS
and WCBS among the top stations, and WFAN top or second highest biller.

Pittsburgh: one AM has fullmarket coverage. Denver: 2, maybe 3 have full day and night coverage. Phoenix: 2 AMs truly cover the whole MSA. Dallas/Ft Worth... except for 1080, 570 and 820, no station covers the whole metro.

It is all about the signal.

Guess your nephews and nieces are giving new meaning to the phrase "baby changing station."  They're showing good sense, and radio will have to adjust to the choices that technology offers them.

I'd argue though that as MTV shortens the attention span of young people, it creates acceptance of audiovisual clutter rather than resistance to it.  And inevitably a bit of impatience with audio alone.

There is a reason for that. They're not trying to SELL you stuff, they're trying to give you stock ticker, news capsules, time and weather so that they can devote the "talking head" portion of the screen to news and interviews that would otherwise would be impossible to do if you had to break for all of the stuff that's running on the crawls and tabs.

It's an efficient screen space use for an all-news channel. However, it is annoying when the soap-opera, comedy or movie you're watching gets blasted by this flash and then a crawl for an ad or promo starts appearing at the bottom or top of the screen.

It was fine when they started doing ad crawls for the World Cup soccer games so you didn't have to interrupt the fast moving games years ago, but now it's gotten out of hand.

Maybe I wouldn't mind as much if the TV stations and cable channels would just run ad crawls at the bottom and ditched the "spot" method of advertising.

The most annoying network in this regard is Fox -- I like the Simpsons, but I don't enjoy seeing Bart & Homer running across the bottom of the screen during King of the Hill. Unfortunately, all the networks have gotten pretty bad.

I can't help but have very fond memories of 25 years ago, when a typical network prime time half hour contained six national commercials, two local commercials, two network promos, plus a station ID and a network ID. Compare that with today, and it is no wonder that PVRs and devices that allow viewers to skip through all that crap and just watch the actual 21 1/2 minutes of programming contained in that half hour.

Broadcasters and cable networks are truly killing the value of their media with all this clutter.

I get irate when the computer crawlers are superimposed over the ACTION. All during the war all this computer crap blocked us from seeing the pictures they spent millions to bring us. How stupid.

I'm told the reason for the source label in the corner of all the programming is required by the copyright holders' contracts. It's so the lawyers can tell where the copyrighted program material was recorded from. Laughingly, they live with a grand vision the crap on the screen has some kind of post-transmission value...(c;

I think we may be saying the same thing. I believe MTV's (and now everyone else's) technique of fast-paced editing has reduced their tolerance for long (in time) shots over a few seconds. I don't believe they have greater tolerance for clutter.

By and large, radio advertising is boring stuff. it's usually some screaming jock or business owner hawking something that has no relevance to the audience. Agencies are so devoted to TV that radio is a second thought. I can't remember the last radio spot I heard. I can remember spots made years ago by people like Stan Freberg who believed in theatre of the mind.

D.C. is not a MW-friendly town.  The big blaster WTOP-AM 15 can be heard clear up to New York City at night.

However WTOP had to network with two other small metro-area stations (one AM & one FM) in order for its News format (actually more spots than news) to be heard throughout the D.C. market.

Another station, WWRC-1260 (now all sports) has trouble covering Washington D.C. bigtime.

P.S.: Why did Clear Channel flip AM 1260 from CNN-Radio News to Fox Sports?

Now they have two all-sports statios with the same name:  SportsTalk 1260 (WWRC) and SportsTalk 98 (WTEM).  Both licenced to the same city and serving the same market with the same format.  Way to dilute your brand guys!!!  Or is there something I'm missing here?

The "Radio Crazy", it's baaaaaak!!!!! Hi!

This is a biggie! Partial ownership in powerful daytime non-directional AM in Little Rock, AR market. 10,000 watts days, 500 watts PSA. Covers most of the state! Transmitter land and tower included. Studio rents for only $350.00 a month. Low dial spot contributes to tremendous coverage.

Seller is asking $2.0 million but is flexible.

Joint venture. (You venture out, you go to the JOINT! Hi!)

Active or inactive investors with $100,000 (100 grand)each are welcome. No individual may own over 49 percent. This includes me!

Seller claims this is the most powerful AM in Arkansas in terms of coverage. Okay wise guy, we KNOW there is a 50 KW AM in Little Rock. (KAAY).

Please! No "AM bashers" or other negative nabobs. If you don't have $100,000 don't even ask!

As usual I am NOT a broker, agent, shill, owner or part owner. I am also not a crook!

Tel: (478)741-1710 in Macon, GA.

73,

Meyer Gottesman, W6GIV
aka "The Radio Crazy"

WMAL doesn't *really* throw a city grade signal over the entire MSA. It's awful anemic to the western and northern suburbs (Loudon county, western Fairfax and northern Montgomery counties) - especially with that big NW null in the night pattern.

>

I'm convinced that Clear Channel has no idea what to do with 1260; they gobbled it up when they bought Chancellor, flipped it from nostalgia to business, then to CNN and now to Fox Sports.

It's always near the bottom of the heap book after book after book regardless of the format - although much of that can be attributed to it's signal.  I really think it's just part of the Clear Channel business philosophy - they don't run formats on their AM stations that serve a community interest, they run formats that are *easy to sell*.  The key word in that sentence is *easy*.  Sports sells (even with big honkin' zero's in the book) because it's geared to young men.  Nostalgia doesn't sell because it's geared to an older demographic that advertisers just aren't targeting. Business and CNN were just place holder formats (sports may be as well) to keep from having a dead carrier.

Clear Channel seems to understand how to invest dollars in the licensing and infrastructure of it's properties (their recent RDS bonanza as an example), but they don't seem willing to investing in the content of their properties (AM's most notably).

If I were a cynical person, thinking from a purely business perspective, I'd think that they enjoy expending capitol on hardware/infrastructure because those capitol expenditures can be written off on taxes.  Investing in content is undoubtedly considered by the accountants as an expense, and therefore ineligible for the tax write-offs.   Wouldn't it be sad if the bean counters were really running the show after all...

Now, excuse me while I go wait for the black helicopters. <grin>

-Jeremy Powell

Not throughout the whole area.  Even WTOP is spotty on AM in places.
You'd think with the high ground conductivity it would be better, too.

Yeah - WTOP's AM pattern must have kept some engineer awake at night with worry. I can't recall who they protect to the west (perhaps an Ohio station, I can' recall), but the western suburbs really suffer. Bonneville did a good thing by adding WTOP-FM and WXTR to the "network".

I recall hearing recently that more diaries were noting the WTOP-FM frequency than the AM frequency these days, so I guess Bonneville's investment in the FM property was a good move.

What are YOU doing to get some ownership for yourself, or to keep these (or
any other) hometown stations from becoming voice-tracked corporate outposts?
It's always easy to criticize those who have the courage to try.

Radio is a mass medium, and you can't keep everyone happy. So the station must make decisions based on what they perceive the audience wants, and what is good for the station. Another classic example can be local severe weather. Two people can be listening to the same broadcast, and one thinks you're not doing enought to cover the weather situation, while the other thinks you're over-reacting and trying to scare people and would you please shut up about the damn weather! Of course when we get them hurricanes here, nobody thinks you're broadcasting too much weather! HI!

I've been out of the business for awhile, but isn't there a rule prohibiting a station from misleading or pretending to be another station?  This wouldn't apply to the WSC case that started this thread, but the 102.7 KIIS scenerio would.

For a station in the midst of an impending format change (like this year's
WNEW in New York), it seems like a great idea.

For anyone else, what's the percentage in it?

That's when I tune out.  Once they say "coming up" that tells you that what's really coming up is a truckload of commercials and mindless promos. Listeners know that.  Stations that do this are telegraphing their stopsets.

Nobody knows what to do with it. It has miserable coverage. As far back as
1970, the baseball games had to be simulcast on WEZR to cover the VA
suburbs, since e ven daytime, 1260 has no signal out there.

They protect 1500 KSTP in Minnesota. The FM is a decent fill for the null
areas.

Well you can always cash in by selling it to some leased-access broadcaster or someone with an agenda (like a church or IDT) thinking that they're going to get an influential "DC" station.

That's cash in your hand and one less engineering and accounting headache.  That's what I'd do if I were in charge of C.C.

I recently found that the drive time show is now four hours of
oldies!!  SWEET!!  I love it.
```

Maybe Univision Radio can flip the entire format to oldies?  Or at
least extend it to weekends and overnights...that would be nice. I'd
have a soundtrack for my weekends again. :-)

But, the AM comes in five over S9 here in Williamsburg.  I always tune in
before driving up to DC to check on the traffic... I keep the signal until
north of Richmond for a while, then it picks up about an hour later and
comes in well.  It's fine on the eastern side of the beltway, but on the
western side it disappears, and right near the confluence of 95 and 395
there is a Japanese language station on 1480 that causes severe second adjacent

I am looking for someone who has a current version of this software to
run some AM channels for a non-profit corporation interested in
starting a radio station/broadcast school. Thanks in advance, Guy.

IDT already thinks it has a monster signal in the Washington metro. I look every once in a while to see if the 50kw increase is anywhere near beginning to happen. They seem to believe the most important part of their media division is a name change and more American Flags and liberty bells in the logo. They haven't a clue.

The network is running dull, drab ex politicians and sqeaky voiced commentators who echo the top honcho's political views.

No. It's simply so you have the channel or logo in front of you all
the time. Copyright holders have no authority over the network or the
stations in this case.

This is one of the reasons my DVD collection is so large.

Here's the results of the most recent DX test that have been received here:

Saturday, December 20, 2003 - WMOX-1010, Meridian, MS tested 12:00 am - 1:00 am CST:

This test was heard by many - it evidently got out well. In York, PA, Bruce Collier got them right away, with their first code ID. All the way in Seaside, OR, Patrick Martin also heard the test, mainly the Morse code - he noted interference from CBR. Bill Harms in Elkridge, MD also heard the test, despite a local about 6 mi away. James Niven in Moody, TX reported the test coming in pretty well at his QTH - he heard CBS news, ads, and "Coast to Coast AM" as well as the Morse. Nick Hall-Patch in Victoria, BC had about decided he didn't hear the test when CBR faded down and the Morse from the test came up. Shawn Axelrod in Winnipeg, MB says he heard nothing but the code, repeated several times; the same was true for Rick Robinson in Hendersonville, NC - he heard the code repeated at least 10 times, but WINS-1010 in NYC was dominant - as was the case for Gerald Atherton in Rice Lake, WI. Robert Hoops in IN also reported hearing just the Morse - he commented that he would not have been able to ID WMOX without it. Ron Gitscher in Palm Coast, FL heard them, as did Gerry Bishop in Niceville, FL. John J. Reiger in South Milwaukee, WI reports he heard them, poor but with code, and no QRM from CFRB or WINS - he said he got an e-mail QSL from Jim Myrick of WMOX in 6 minutes! Jerry Coatsworth in Merlin, ON also heard the WMOX code under WINS and CFRB;

Barry McLarnon in Ottawa, ON also heard them under CFRB, as well as a station he thinks might be in TN. Liz Cameron of the Michigan Area Radio Enthusiasts also heard the test, but only the code IDs, due to QRM from CFRB. Michael Procop in Bedford, OH also heard the code IDs, as well as some Coast to Coast bumper music, but also noted QRM from CFRB and WINS - and WINS was largely the problem for Dave Braun in Wyoming, DE, who also reported hearing the test and the code.

But not everyone was able to hear the test - Kevin Redding in Mesa, AZ had no luck, as did Chuck Boehnke in Keaau, HI, Patrick Griffith in Westminster, CO, Eric Breon in Middletown, PA (he noted that WINS and CFRB dominated the frequency by him), Russ Edmunds in Blue Bell, PA, and Nigel Pimblett in Medicine Hat, AB (for him, CBR, at 180 mi away, was the main problem).

That's all for now...

Lynn.

What's with the wall-to-wall AM band Christmas music? I don't know if it's particularly bad this year and I never noticed, or if it's that Big Radio owns everything and is saving on staffing this year (are they thinking nobody is listening so they might as well force the issue?).

Maybe the weather was better in previous years and I was just outside more.

Anyway I get some station on every AM channel in the daytime, and there were about three sports talk shows (they have a right to be there and I don't mind but please) and 97 Christmas Music channels all day.  How is this possible?  Is it like car dealers being closed on Sunday, sort of a gentlemen's agreement?  But listeners just flip it off.

I like the background sound of Imus and Boortz and Rush while I work, not Leroy Anderson for Christsake.

Actually a lot of stations carried Rush and Rush went to Christmas Music for the Deaf, and the local Rush station preempted Rush for their own Christmas Music.  It's gotten two deep, it's so bad: Christmas Music preempting Christmas Music preempting the regular show.

The Messaih _once_ on some station would be nice on Christmas Eve, but that's my own nostalgia.  Nobody listens to Leroy Anderson unless there's a rap version.

Try it on a GE Superadio III.  It's an "average" radio that you can
buy for $49 at Sears.  If you can't hear the difference in quality
with the IBOC on, then a hearing check is in order.

Mark my words... IBOC on AM will be a flop.  In addition to the
horrendous interference, degraded analog audio, and artifact-laden
digital audio, who would spend $500+ for an "HD Radio" setup, just to
hear the same local stations, when XM or Sirius costs less than half
as much and delivers 100 channels of new, exciting, and often
commercial-free programming?  And when the radio stations realize that
consumers aren't going for it, who would spend the $75,000 - $100,000
per station to convert to IBOC?

Arthur Liu's Multicultural Broadcasting tried IBOC on 930 WPAT and
1480 WZRC in the NYC area.  But they gave up on it after only a few
weeks on the air, because of the degradation of audio and signal
quality, and because none of these stations' listeners would ever care
to own an IBOC receiver, even *if* they were available in stores.  But
it's funny -- you never hear about these kinds of negative experiences
in Radio World or other publications that are rabidly pro-IBOC.  And I
know things are really strange when even _David Eduardo_ is speaking
favorably of IBOC.  What is the world coming to?

For sale:

Partial ownership in fulltime 1 KW AM in Arkansas.

(The "Radio Crazy" is baaaaaaaak!!)

Joint venture. (Venture out and you go to the joint! Hi!)

Active or inactive investors with at least $10,000 each are welcome. Total asking price expected to be about $100,000. Transmitter/tower real estate is included. Studios rent for only $350.00/month.

No individual can own over 49 percent. That applies to me too!

Station has over 85,000 people in the daytime 0.5 mv. coverate area and over 38,000 in the "city grade" 5.0 mv contour. College town!

I am NOT a broker, shill, agent, owner or part owner. I am also not a crook!

Tel: (478)741-1710 in Macon, GA.

Please! No "AM bashers" or other negative nabobs.

73,

Meyer Gottesman, W6GIV
aka "The Radio Crazy"

It's a combination of those factors.

* Christmas Day is a very, very, very low listening day for AM news/talk stations.  When you're out with the family, exchanging presents, doing all those Christmas things...listening to issue-oriented talk is perhaps the last thing you want to do.  I'm a news/talk junkie, and even *I* am not really "in the mood" for it on Christmas Day.  There's not usually a lot going on in the world aside from Christmas-related "news", so it's almost not worth bothering.

* Most stations give their full-time/regular staff Christmas Day off. That leaves either automation or board ops as the only people working. And as you noted, even Rush strayed from format on that day, with a probably pre-recorded Christmas Music show for whatever stations were not preempting him with something else.

* There are many syndicated packages and shows aimed at news/talk

stations who are providing the non-traditional programing. I know of at least two "Christmas music syndicators" which air a satellite feed of Christmas music for news/talk stations, from early evening Christmas Eve through late night Christmas Day. The traditional radio networks offer things, too...like ABC's Disney Christmas 3 hour special (almost an in-house production for the Mouse House ;).

I did hear some "regular" talk Christmas Eve night...syndicated Rollye James was live on Wednesday night (heard locally on CC's WHLO/640 Akron). And I'm pretty sure "Coast to Coast AM" ran a regular George Noory show, though it was likely a best of.

Mike

I suspect you're right and it's a maintenance problem. One of the
local TV stations here in town seems to be forever having audio
problems when it runs network programs off of the satellite or the
evening news from the station in the next nearby larger market. Some
nights the sound is so bad as to be unintelligible. Yet, it goes on
month after month this way. They just don't care enough to pay to fix
it (or can't afford to).

WKMI is the #4 rated station in its market, which is relatively small and ranked #182 nationally. I'd be surprised if a relatively successful station, albeit in a smaller market, is just ignoring a critical engineering issue. The first suggestion, if the station is one of interest, is to call it and make a polite inquiry of the manager or program director or operations manager.

That said, I do take issue with a statement that most AM stations are on the air to hold the license. Most AM stations are on the air to make money. Not all do, but many are among America's top billing stations, and those AMs with decent signals that cover their markets are successful. And many smaller AMs that have limited coverage have found great success and profit by serving ethnic  communities, minority groups or religious followings.

In some cases, there are over-radioed markets where the FMs have better coverage and the AMs are inferior (Palm Springs leaps to mind) where the AMs are all pretty miserable and none even covers the entire market. However, even in those cases, there is generally someone who is willing to take the risk of buying the station to program their "better idea."

I just wanted to wish everyone happy holidays. Here's a list of some of the records I played in my Christmas show

12-21-03 Christmas Show

Blue Holiday (45 version)-Shirelles
It's Christmas Once Again-Frankie Lymon
It's That Time Of The Year-Manhattens
Happy Reindeer-Dancer, Prancer & Nervous
Sleighride (stereo)-Ronettes
I Want A New Baby For Christmas-Johnny Preston
White Christmas-Ravens
A Soalin'-Peter, Paul & Mary
I Hope You Have A Merry Christmas-Kim Weston
Santa Bring My Baby Back To Me-Nathaniel Mayer
Christmas In The Jungle-Derek Roberts
Jingle Bells-Singing Dogs
Merry Christmas Baby-Otis Redding
Christmas (Baby Please Come Home)-Darlene Love
Christmas Imitations-Bobby Rydell & Chubby Checker
Christmas Just Ain't Christmas Without The One You Love-O'Jays
God Rest Ye Merry Gentlemen-Smokey Robinson & Miracles
Rudolph The Red Nosed Reindeer-Cadillacs
Why Can't Everyday Be Like Christmas-Elvis Presley
Candy Cane Sugary Plum-Danny & The Juniors
It's Christmas Time-Five Keys
Merry Twistmas-Marcels

Santa, Santa-Rockyfellers
I'm Falling In Love With A Snowman-Millie Small
Another Lonely Christmas-Moonglows
Trouble's A Brewin'-Jack Scott
Donde Esta Santa Claus-Augie Rios
Christmas Auld Lang Syne-Bobby Darin

NOTE TO PD'S.....I'm always looking for more stations to carry my show.
Check it out at http://www.hitsofyesteryear.com

David,

I always value your opinions and find you one the most sane of the regulars here.  But I did not say that "Most" AMs are only on the air to hold the license, I said "Many" are.  There is a big diff and it is true.  What you said about the successful AMs is also true.  I just think that any station that let's it's quality get that bad is among the ones just holding the license.  If I owned it, it would be in stereo and have the best audio quality available 24/7.  If I couldn't afford to keep it going properly I would sell it or send the license back to the FCC.

For anyone interested, here's a reminder of upcoming DX tests; if anyone has any additions or corrections, please contact me. (BE SURE TO NOTE THE TIME OF THE TEST; THEY ARE IN THE LOCAL TIME OF THE STATION)

Saturday, December 20, 2003 - WMOX-1010, Meridian, MS 12:00 am-1:00 am CST (0600-0700 UTC).

Please remember, what's listed as being on, say, Monday *may* be what you think of as Sunday night!

If you try for (or hear) any of these tests, PLEASE post a message letting me know, and please, drop the station personnel a note, via e-mail or snail mail, thanking them for running the test! Also, for brevity's sake, I didn't post the QSL addresses; if you need these, let me know!

Lynn.

Here's the results of the most recent DX test that have been received here:

Sunday, December 14, 2003 - WILM-1450, Wilmington, DE 1:05 am - 3:00 am EST:

There wasn't much success in hearing this test outside the NE US. Gordon Bell in Troy, NY heard them and sent a detailed report to WILM, as did Mike Prindle, listening in Eastern Long Island. However, Dave Hochfelder in Highland Park, NJ tried for the test and didn't hearing, even with a local phased. Rick Robinson in Hendersonville, NC also tried but didn't hear them; the same was the case for Bill Dvorak in Madison, WI, Adam Myrow in Memphis, TN, Gerry Bishop in Niceville, FL, Robert Foxworth in Tampa, FL, and Paul LaFreniere in Grand Marais, MN. Les Rayburn in Central Alabama and Ron Gitscher in Palm Coast, FL both tried for the test and are analyzing their tapes of the test.

That's all for now...

Lynn.

KP,

You didn't mention what type of vehicle was involved.  Sounds like it's not
the radio, but something in the vehicle.  If its under warranty, bring it to
the dealer, they ought to straighten it out.

-Steve

Someone mentioned that while watching too much TV decreases IQ, Radio
listening is actually shown to increase IQ. Is there any concrete
evidence/sites/publishings in this regard ?

Thanks.

Vijay

Point taken on the "many" vs. "most" distinction.

Since I am at the West Coast's first regularly operating IBOC AM station, I can attest to the potential of better quality. AM IBOC on the couple of receivers we have sounds better than some of the more squashed FMs in the LA market...

However, there are a "scad" (to avoid having to say either "many" or "most") of AMs that do not deserve to exist, as they cover very little, or have miserable facilities and high-Q DAs and no intent to improve. I just wonder if IBOC may create a band cleansing in the process.

How can ANYONE'S IQ increase listening to 40 minutes of REPEATING
commercials an hour?

But, wait a minute!  Someone says there is a fine line between genius
and INSANITY!  That must be why....(c;

It would seem that listening to Clear Channel would only tend to melt
the brain into a mass resembling chocolate pudding.....

I almost lost it, last night, after I'd seen the stupid Gateway
Computers cow feet come through the ceiling over the bed for the 72nd
time in 2 hours.  Who programs this shit?

Yeah but I bet its trashing the analog signal that people are
listening to.  WOR in New York sounds like a buzz-saw when its running
IBOC.  Not that it's any better at night anymore either.  Music sounds
all distorted and clipped.

But Larry, that's the whole point. Repetition is the key to getting people to remember the commercial!

My favorite example: Sunland Ford/Lincoln/Mercury in nearby Victorville, California. I have heard their stupid cutesy slogan and company jingle so many times I could literally sing it in my sleep. But I remember it.

The worst is when I'm driving over on the west side of Victorville and I pass their lot and then hear the jingle on the radio. (Happens more often than you might think.)

Since the High Desert only has one television station (KHIZ-TV 64 in Victorville), most of the residents of this area get their local programming from the Los Angeles television stations via satellite or cable. Well, Sunland has bought copious amounts of advertising time from the local cable company too. And it's not even a few different spots, it's the same one. Over, and over, and over, ad nauseum. I'm sure that if it is possible to buy local or regional advertising slots from DirecTV and DISH, they have done that too.

> It would seem that listening to Clear Channel would only tend to melt
> the brain into a mass resembling chocolate pudding.....

It's not a Clear Channel thing. Commercials are just as annoying on everyone else's broadcast channels too. And while there are a few truly innovative, entertaining or thought-provoking ad campaigns, most of them just... suck.

We bought a dozen or so average consumer radios, from a walkman to a boom box to a clock radio, and whatever is in between. On every one, the music in analog sounds as good as it did before, and switching the IBOC on and off produced during several days of testing no significant differences on average radios.

The only thing that IBOC requires is a narrower analog bandwidth. The processing stays the same, and most radios sound identical as they have limited bandwidth to begin with.

David Eduardo <amdavid@pacbell.net> had written:

| We bought a dozen or so average consumer radios, from a walkman to a boom
| box to a clock radio, and whatever is in between. On every one, the music in
| analog sounds as good as it did before, and switching the IBOC on and off
| produced during several days of testing no significant differences on
| average radios.

Has anyone thought to test on car radios? It's my observation that
the average car radio on AM has more sensitivity and (sometimes) wider
bandwidth than the average home unit. That, to me, would seem to be
the acid test.

Most of the stuff you can get in a Target or Mall-Wart for home
use is pretty junky. A Zenith Circle-of-Sound clock radio from the
1970s will run circles around anything for home use today.
(I miss Zenith in a curious kind of way.) The best recent unit that
I have is a Cambridge Sound Works Model 88 from 2001. It seems fully
NSRC compliant. The two music stations on AM that I could stand to
listen to for extended periods, KFRC (oldies) and KMZT (classical)
sound reasonably good -- not quite FM, but better than almost any
AM. It's a little weak as far as sensitivity goes, though.

| The only thing that IBOC requires is a narrower analog bandwidth. The
| processing stays the same, and most radios sound identical as they have
| limited bandwidth to begin with.

But then there is the interference. Electrical interference on AM is
bad enough as it is.

I guess I'm just too old to listen to radio any more.  I download lots
of old shows off alt.binaries.sounds.radio.oldtime that have FOUR
commercials in them, smoothly integrated right into the show itself so
you don't actually realize Glenn Miller is selling you a Philco until
it's almost over...(c;

Oh, well, all the BBC stations are live on the net and archived so I
don't miss my favs.  I emailed them and offered to pay my radio tax to
do my part because I'm on their servers quite often.  That shook 'em
up.  They refused my offer but appreciated the thought.

I listen to a 4 minute snippet of some talking head on news/talk, then
when the 8 minutes of spots comes on I turn it back off and go back to
my MP3 player.  Radio is the reason for the MP3 explosion.

Your experience is precisely the opposite of a 50kw (oldies) music station with which I am familiar.  It turned off the IBOC because of unacceptable adjacent channel interference issues.  To the great surprise of the PD, who believed as you do that no one would notice the difference in the analog bandwidth, he immediately began getting calls from listeners during his airshift saying the sound of the station had improved greatly, and praising the station for whatever it had done to make it sound so much better.  AFAIK this station has no immediate plans to resume testing of IBOC.

I personally have heard this station with IBOC operating and found the analog signal nearly unlistenable on a narrow-band standard GM car radio.

Steven J Sobol <sjsobol@JustThe.net> had written:

| It's not a Clear Channel thing. Commercials are just as annoying on everyone
| else's broadcast channels too. And while there are a few truly innovative,
| entertaining or thought-provoking ad campaigns, most of them just... suck.

Ah, yes, car dealer ads appear to be the worst. And don't forget the
weekend remotes from the car dealer, the staple financial lifeline
of small markets. I bet you have those in Victorville, too.

The most clever *and* memorable of recent times (although with heavy
repetition) seem to be the Epsom printer spots. Since they're
running on KCBS in heavy rotation, I think I've got those memorized
now.

Two stations here in the New York City market (WPAT-AM 93 Paterson and
WZRC-AM 1480 New York) were also trial-running IBOC, in addition to
WOR-710.

The test didn't last for even a month.....

Maybe there's something to do with the processing or what. Who knows.

All I know is, when I'm listening to WOR with IBOC going, there is
also a hiss in the audio - almost like tape hiss.  And this is on a
medium quality digitally tuned walkman, so I know I have the station
on the dot.

However, on some realy really low-fi clock radios and pocket radios
the station sounds 'OK' sort of...not including the hissing going down
all the way to 68 and to 74 (where it's sort of overridden by the
splatter from the stations at 66 WFAN and 77 WABC respectively.

All of us tested our own car radios, which, with two exceptions, are anoalog
only. We noticed no difference. I probably had the acid test in my hands, as
I had created the format and know the music to the point I can hear it
without a radio. I noted no difference in any car radio, ranging from a
$39.95 cheapie in a van to a $3,000 Bose system.
>

But nearly 75% of all listening is in the home or office, not the car.

I had a McKay-Dymek in the 70's and 80's and it was the radio that I used to do an initial set-up of audio chains. However, even then we did the same thing as today: purchase of radios typical of those used for 90% of listening. And adjustments were made to optimize the sound for the last 10 years or so of consumer gear.

The interference to other stations takes place in areas where those other stations do not have listeners. the minor inconvenience of not being able to DX 1010 and 1030 in LA is nothing compared with the gain of eventual broad acceptance of digital AM.

That is a good question for the radio programmers on this newsgroup.

Why is the spotload so heavy? Breaks on talk stations like WABC used to be three or four commercials. Now it's more.

All news WCBS used to tout that it only played one commercial at a time between news capsules. Now they sometimes play two.

WINS sometimes plays three in a row when they used to do one or two spots about 8 years ago (pre all this consolidation).

Infinity some years back made all their stations up the spot loads.

Ditto, why cluster all the spots in 10 minute sweeps twice an hour instead of breaking them up into frequent two or three minute breaks so it SEEMS like less commercials are being played?

It's RF trash being dumped on the vehicle power lines. Is it related to the heater being turned on? Start pulling fuses until the problem goes away and you'll locate the source.

I had an opportunity to listen to WKMI today. My wife left me in her car for a minute while she ran into a store to pick up something. The fact that the minute turned out to be an hour is immaterial to this discussion :) She has a 2002 car with a Bose audio system so it's capable of good quality. We were within the WKMI 2 mv/m contour in a quiet (RF wise) location in which I was able to listen to a 1 kw AM station about 20 miles away with a good signal. I listened to all the AM stations in the market and WKMI sounded to me like either something was being over driven or more likely the RF final (if they still have a plate modulated transmitter) is soft and they are pushing it hard to get power output.

But then again (if it is plate modulated) it could be a really sick tube in the modulator section. Listening to adjacent channels I do not believe that they are running IBOC.
I'm going to have to do some checking next week to figure this out. Unless they are waiting for parts I can't believe anyone would let this go like it is for long.

That's the part that confuses me. We've got music stations that announce "coming up next -- 9 in a row". They mean 9 songs, but if you listen often enough you quickly learn that also means 9 minutes of advertising [0] - i.e., that announcement is your cue to change stations...

I suppose since the ratings don't show whether someone was listening during the ads - only that they were listening - that if clumping the spot load increases the numbers the rest of the hour it makes short-term economic sense. One just has to wonder what will happen when the advertisers start finding they get a smaller increase in sales per thousand "ears" bought?

(indeed I note the station in the bad example above has begun to promote "fewer commercials, more music" and indeed appears to have broken up their spot load across the hour)

For all bands of radio combined, perhaps.  It can't possibly be true for AM.

Tons of research has been done on this, and fewer stops create far less tune out. Generally, tune out occurs in the first spot, so there is no disadvantage to running many at a time.

In general, stations that went to fewer stops have increased ratings while those adding more have gone down in ratings.

The "never more than a minute from music" sounded good, but did not work.

The other thing that REALLY turns me off is when they run out of things to say/do and start saying "News Talk 1250, WTMA" over and over and over ad nauseum.  "News Talk 730, WSC"   (WSCC is more ashamed of its call letters.  Being a Clear Channel station, they think they should be able to use RCA's WSC station call, assigned to marine band use.)

Dan Moon, who switched from 1250 to 730 after being on WTMA for 30 years, once asked the call in listeners what they never wanted to hear on WTMA, again.  I called in and waited my turn after 6 spots played. "Dan, if I never heard 'News Talk 1250, WTMA' again, it wouldn't be too soon.  Every one of us out here listening KNOWS what the station's call letters are and KNOWS what frequency it is on.  We don't need to be told 37 times every 10 minutes.  Why don't you put on some music if you all run out of things to talk about."  His answer was truly funny and he didn't want to talk to me further.  Three more callers followed me up.  I swear it was uncoordinated, but very effective.  It took 'em three weeks to get the self-promotion spots back up to 37 every 10 minutes in the aftermath.

Over on Clear Channel's WSCC, ol' Dan says the call letters/frequency nearly continuously, now.  Of course, he says WSC, not their real call until the hour when they have a quickie spot to satisfy the FCC.

I'm for an FCC regulation on all of them that makes it ILLEGAL to say the stations call letters EXCEPT once during the 2-minute-to-the-hour requirement and makes it illegal to quote the station's frequency all together!  Any takers?!

Yes, you complain about this. Yes, the listeners calling in complain about this. No, the frequent call letter mentions are not for you, or those other listeners.

It has been proven time and time again that frequent call letter mentions = higher ratings. While you indeed may know which station you're listening to, many others tune in and out and DO NOT. And quite a few of 'em end up with Arbitron diaries.

Don't believe me? Hook up with a radio friend of yours - in programming - and have 'em tell you. I've heard about diaries in one of my former home markets that would amaze you.

Rush Limbaugh has been a talk radio institution since 1988. Four years before that, he rose to prominence as a local host on Sacramento news/talker KFBK, which happened to employ me (not overlapped with Rush being in Sac ;) for 7 1/2 years.

So, that means Rush has been on 1530 AM in Sacramento for nearly 20 years straight, every single weekday from 9 AM to noon, with late night and weekend repeats.

Despite that, I've heard of relatively recent diaries (within the past 5 years) that have placed Rush on: KCTC (AM 1320, a nostalgia station), KSTE (AM 650, a sister talk station to KFBK which runs Premiere's Glenn Beck in that slot), KCRA (a former set of calls for the aforementioned AM 1320), and that's just off the top of my head.

This, despite the fact you'd expect any sentient being in Sacramento to know which radio station Rush was on, even if they don't listen to talk radio or radio at all! KFBK has featured very frequent billboard ad campaigns, along with other media, promoting Rush's show, even in recent years.

The frequent call mentions may frost you...but for stations, especially news/talk stations...they usually mean HIGHER RATINGS.

Mike

for AM.

There are only 2 bands, AM and FM, that appear in ratings above minimum reporting standards.

I ran audience by location for LA, the highest in-car location in the US.

AM
At Home 49%
In Car 36%
At work 14%

FM
At home 42%
In Car 30%
At work 25%

There is a small AM advantage in car, a larger one in home, and a disadvantage at work.

Nationally, a greater portion of listening is in home and at work, due to shorter commute times than LA. And the AM vs. FM in car distinction is smaller still due to that very same commute time reduction.

In Chicago, for example, the difference in percentage of AM and FM listening in car is less than 2 percent, at just under 30% of listening time. In a market like El Paso, with significantly less commute distances, the AM and FM percentage that is in-car is about 25% for each band.

Except for the legal ID, the station can call itself anything it wants, as long as what they want is not trade marked by someone else.

Except for yourself, how many listeners care that WSC is a marine call? None.

However, you can look at arguably the nations most successful AM, KGO in San Francisco. 25 years, 102 ratings in first place. They give the calls 50 to 60 times an hour. Always have.

11.6% of Arbitron diaries have unidentifiable listening in them. It is nearly all to stations that do not identify enough who they are.

Most listeners listen to multiple stations. Most do not remember where they tuned at a specific time unless constantly reminded.

> Over on Clear Channel's WSCC, ol' Dan says the call letters/frequency

So? They have named the station WSC to make it easy to remember. This is like WWWE in Cleveland (now WTAM) using 3-WE as an identifier.

No one but you cares.

> I'm for an FCC regulation on all of them that makes it ILLEGAL to say

You are kidding, right?  Except for the legal ID, a station can use any identifier it wants.

Find something really important to worry about.

>Every one of us out here listening KNOWS what the station's call letters are and KNOWS what frequency it is on.  We don't need to be told 37 times every 10 minutes.<

I deduce from this that you've never seen a filled-out Arbitron diary.  If you actually worked in radio, the sight of a filled-out diary would scare the bleep out of you.  There are many stations that run more call-sign and/or frequency and/or slogan mentions than your example, and yet diaries continue to contain error after error after error.  I have seen call signs absolutely butchered, dial positions listed as "right next to 92 on my radio" or "my fifth pushbutton," and station slogans that bear no resemblance to any station in the market being surveyed.  The fact that stations actually get credit for some diary-keeping listeners I can only ascribe to some sort of miracle.  Every one of you out there listening does NOT know the call sign or frequency, in fact more listeners don't know than those who do know.

Most radio listeners are not hobbyists who follow radio and know all its ins and outs.  They are casual listeners who have it on in the background, or are listening for the programming, and don't give a hoot in h*ll what the call sign or frequency are.

I beg to differ. If anyone called the FCC on that Central Pennsylvania station that id'd itself as WHOT-FM all of the time except at the top of the hour, would the FCC not spank the station? (I'm referring to a station that was mentioned in the Airwaves Digest a few years ago. WHOT-FM is the legal callsign of a station at 101.1 in Youngstown, Ohio, and has been for years.)

>> Over on Clear Channel's WSCC, ol' Dan says the call letters/frequency

>> until the hour when they have a quickie spot to satisfy the FCC.
>

> So? They have named the station WSC to make it easy to remember. This is
> like WWWE in Cleveland (now WTAM) using 3-WE as an identifier.

Bull. There is no way anyone will mistake "3WE" for someone's call letters.

Nor will anyone mistake "Power 106", "Hot 97", or "Z92.5" for another station's calls. It's *not* the same thing.

> No one but you cares.

It *is* misleading and shouldn't be allowed. I just don't care enough to complain.

> You are kidding, right?  Except for the legal ID, a station can use any
> identifier it wants.

So if I license a station and ID myself properly as, say, KIYS at the top of the hour, and I'm at 102.7, but during the rest of the hour I call myself 102.7 KIIS, no one will care? There is, of course, a station on 102.7 with those calls.

Wink 106 FM in Corning, New York, used to play that game a few years ago... I'd hear it when I was driving through Corning on the way to Albany or Boston. The jingles said "Wink 106, W-I-N-K". WINK-FM, if I'm not mistaken, is in Tampa, or was a few years ago anyhow. Even at the top of the hour, the DJ would ID the station correctly ("You're listening to WNKI, Corning/Elmira") and right after that you would hear the rest of the jingle, which used the wrong calls (WINK).

I never cared enough to file a complaint with the FCC, but it's still not right. I'd be pissed if I owned or worked for the stations whose calls were being improperly used.

Hello,
i' have made some update on "The Italian HF Archive", the website dedicated to the italian HF/LW/MW stations with a lot of photos and infos. Today you can find new photos of coast station "Bari Radio" and the Rai Bari medium wave center.

Here is the url:

http://www.mediasuk.org/archive

Inside "HF Archive" you can find info about:

Broadcasting site

Rai - Shortwave Center Prato Smeraldo - Roma
AWR - Shortwave Center Forl�
Rai - Long Wave and SW Center - Caltanissetta
Rai - Medium Wave Center - Santa Palomba
Rai - Medium Wave Center - Capo Vaticano
Rai - Medium Wave portable trasmitter
Rai - Medium Wave Center - Sanremo with CFA antenna
Rai - Medium Wave Center Genova Granarolo

Utiliy Station

Coast Station IAR Roma Radio
ICI - IRM Station Coast Guard Roma
Coast Station IPP Palermo Radio
CIRM - Radio Medical Service Station IRM
NDB Beacon Campagnano
NDB Beacon Albenga
NDB Beacon Santa Maria di Leuca
NDB Beacon Capo Vaticano
SalCost - Salini Costruttori
IGN - Protezione Civile Roma

For sale:

(The "Radio Crazy" it's baaaaaaaaaaak!!)

Partial ownership of fantastic 4-station group in Northern Michigan by Lake Huron. (One of the Great Lakes, silly!)

Joint venture. Active or inactive investors with $100,000 each are welcome. Total asking price is $3.2 million and the studio building and land alone appraise at $600,000. The station's total billing was about $800,000.

Three FM's and one AM. Here is the breakdown.
1-Class C1 FM, 100,000 watts ERP.
1-Class C2 FM, 50,000 watts ERP.
1-Class C3 FM, 20,500 watts ERP (25 KW but excessive

ht. above avg. terrain)
1-AM, 5000 watts days, less at night, non-DA.

In three communities. A "showcase"

Only those fully identifying themselves will be told
the call letters and cities of license.

Tel: (478)741-1710 in Macon, GA.

I am not a crook, shill, agent, owner or part owner.

Please, no "FM bashers".

73,

Meyer Gottesman, W6GIV
aka "The Radio Crazy"

So, the constant mention of the station call/freq isn't working. They
all do it and the Arbitron diary is still full of the information the
three replies mention. I suppose it does make the rating higher, the
only reason they are all on the air any more.

Thanks for the information. Probably best Arbitron doesn't call
me...(c;

Isn't the point to increase "Time Spent Listening" to be full 15 minute blocks so the station gets credit for that?  If you run two 10 minute breaks, you can have 20 minutes of programming between them gaining 40 minutes Time Spent Listening over the course of the hour assuming one comes back after the commercials.

If you had only 5-10 minute blocks of programming with commericlas in between, you would never get the 15 minute blocks of Time Spent Listening that radio stations seem to want.

Am I correct on this or way off?

This was the old 103.9 WHTO Muncy, PA.  Muncy, PA is east of Williamsport, PA along I-180.  All this would have been going on in the early 90's as I was going to school in Lock Haven (west of Williamsport) at the time and 103.9 was the best Top 40 station around (for the area). I remember that they would use "103.9 WHOT" when the jock would talk on the air, but at the top of the hour Legal ID, the fast-talking voiceover guy would use the proper "WHTO Muncy, Williamsport".  I also have an old bumper sticker of theirs that reads "103.9 WHOT is Red Hot".  By the mid to late 90's 103.9 had moved to another frequency and moved their location to somewhere southeast of Williamsport.  I assume for better coverage of the area.

I remember when I listened to the station and wanted to call them looking for a phone number under WHOT and not seeing anything.  I don't know how I finally figured out it was WHTO, but what I do remember was I was confused!  Was it WHTO or WHOT?  I didn't know for sure, but I did know I was listening to 103.9 FM.  I guess that counts for something.

A question related to all of this: In the Williamsport ratings, who would get credit if someone wrote down in their diary that they were listening to WHOT?  WHOT at the time was not in Williamsport, it was elsewhere - Youngstown, Ohio as Steven Sobol mentioned.  On the same vien would 103.9 WHOT or just 103.9 give credit to WHTO - the real 103.9 in Muncy (Williamsport)?  Obviously, a radiophile who put down WHTO would do the station best since they'd definitely get credit.

To me, a situation like this is where a radio station shoots itself in the foot by using calls on the air that are completely different than those that they are legally assigned.  It confuses the average listener, but it would seem to me that it really confuses the ratings book which is what all radio stations live an die by.

Mike

There are other ways... Apple did that memorable TV commercial during
the Superbowl one year and it still gets replays just because it was
so interesting.

Stan Freberg did a few radio commercials for Chung King which also
attained notoriety.

>It's not a Clear Channel thing. Commercials are just as annoying on everyone
>else's broadcast channels too. And while there are a few truly innovative,
>entertaining or thought-provoking ad campaigns, most of them just... suck.

This is one reason why I like sponsorship advertising. You don't have
to claim a thing. You just tell the public what you do for a living.

Has anyone done studies to show where each type is most effective?

If WHTO had "WHOT" registered with Arbitron as their on-air slogan, they'd get credit for any "WHOT" in the diaries.  Probably full credit, as the Youngstown station's signal comes nowhere near the Williamsport market.

They'd also get credit if someone marked down "103.9", since they automatically get credit for on-frequency mentions.  So, if they registered "WHOT" and someone marked down "103.9 WHOT", there's no doubt who they're hearing.

If you couldn't get anyone to even give you $5,000 trying for an
Oregon AM in these groups and elsewhere for weeks, why do you think
someone would give you $100,000?

Just doesn't seem likely. Shoot for the practical, at least.

That is an interesting point, and one to ask in Florida, where a bunch of
Clear Channel talkiers are all called "WFLA" except at the top of the hour.
They are not networked, either. they only ID with real calls on top of hour.

Or in Puerto Rico, where the news net of WKAQ (AM) has been called "WKAQ
Radio Reloj" for 4 decades on a network of about 5 or 6 stations, some 24/7,
and none IDing with true calls except  onthe hour.

I don't think a formal complaint has been made, although I know some DXers
have written complaints of an informal type.
>

Since this has been going on for 4 decades with no action by the FCC, I
guess they don't fcare, either.
>

Anyone at 102.7 can call themselves 102.7 Kiss, but only if they license the
Kiss name from the mark holder.

I'll bet it would be hard for anyone to say that the station, whose name is
Wink, could not spell wink so diary keepers would know how to write it down.
>

As long as the signals don't overlap, it probably makes no difference to
them unless they have an interest in preserving a national service mark.

"M. Hale" <matchgamepm79@yahoo.com> wrote in message

> Isn't the point to increase "Time Spent Listening" to be full 15 minute blocks so the station gets credit for that?  If you run two 10 minute breaks, you can have 20 minutes of programming between them gaining 40 minutes Time Spent Listening over the course of the hour assuming one comes back after the commercials.

If a person listens form 5:55 to 6:20, the station gets 45 minutes of credit.

Credit is given for 15 minutes as long as the listener has 5 minutes or more of recorded listening in any quarter hour.

There is no way to get "40 minutes" of credit as the system is based on quarter hours.

>
> If you had only 5-10 minute blocks of programming with commericlas in between, you would never get the 15 minute blocks of Time Spent Listening that radio stations seem to want.

You only need 5 minutes to get credit for a quarter hour. However, few listeners are so precise, most writing down hour and half hour blocks.

> A question related to all of this: In the Williamsport ratings, who would get credit if someone wrote down in their diary that they were listening to WHOT?

The station probably registered WHOT as a slogan, along with the Hot moniker. Since there is no other similar call in the MSA (Metro Survey Area or Metropolitan statistical Area), the one with the fake calls used as a slogan will get credit as long as Arbitron was notified.

> WHOT at the time was not in Williamsport, it was elsewhere - Youngstown, Ohio as Steven Sobol mentioned. On the same vien would 103.9 WHOT or just 103.9 give credit to WHTO - the real 103.9 in Muncy (Williamsport)? Obviously, a radiophile who put down WHTO would do the station best since they'd definitely get credit.

Again, if the staiton registered "WHOT - Hot" they would get credit. In general, most diary entries are by frequency, so the point is almost moot.
>
> To me, a situation like this is where a radio station shoots itself in the foot by using calls on the air that are completely different than those that they are legally assigned. It confuses the average listener, but it would seem to me that it really confuses the ratings book which is what all radio stations live an die by.

Since no one else uses the calls in the market area, I don't think the listener would be confused at all.

The constant repetition does work. What does not work is not saying the name
or calls often.

It's funny. Some people get teed off because the station "overannounces" the call sign or name. Yet...some of these people also get annoyed when you DON'T hear a call sign or name until the top of the hour.

That is the case with a lot of college stations where deejays just slap on record after record (or CD after CD) on the air, mumble a couple of words every half hour but that's about it....then back to another 30-in-a-row.

Why not?  You got the licence, Larry.  It's perfectly legal...and if
you were talking with other ham radio operators, they'd recognize you
instantly. :-)

Amateur Radio Newsline(tm) Report 1373 - December 5,  2003

Closed Circuit Advisory

This is a closed-circuit advisory, and is not for re-transmission. Repeat, not for broadcast.

This is Andy Jarema, N6TCQ, Newsline Support Fund Administrator.  As we move into the holiday season, we ask that you include Newsline on your list of giving.  This is the first request we've made since April, and we'll be back in the following weeks to thank everyone that helped in that campaign.  But with support in the months since that campaign only averaging between $200 and $250, and with our normal monthly expenses of between $600 and $800 each month to bring you the latest news on Amateur Radio, you can see where the math is headed.

The address for the Newsline Support Fund is Newsline, PO Box 660937, Arcadia, CA  91066.  If you missed that, it will be given again at the end of today's newscast.  And now the latest news:

**

Amateur Radio Newsline report number 1373 with a release date of Friday, December 5, 2003 to follow in 5-4-3-2-1.

The following is a Q-S-T.  Hams in space fail to show up for a highly publicized operating event while hams on the ground save a life.   Find out the details on Amateur Radio Newsline report number 1373 coming your way right now.

(Billboard Cart Here)

**

## ON THE AIR: ISS ASTRO-HAMS A NO-SHOW FOR K6DUE COMMEMORATIVE EVENT.

What if you planned a party but your host never showed up to open the door and turn on the music. This is essentially what happened to the ARISS folks the weekend of November 29th and 30th in regard to the kickoff of its NA1SS special event tribute to the life of Roy Neal, K6DUE. But it was not completely unexpected. Amateur Radio Newsline's Norm Seeley, KI7UP, has the rest of the story:

---

The event was to get underway on Saturday, November 29th during as the space station passed over the US West Coast. ARISS International Chairman Frank Bauer, KA3HDO, says that Expedition 8 Commander Mike Foale, KB5UAC, had even been supplied with a list of potentially good radio passes and the frequencies where to call the I-S-S had been published world wide a few weeks ago. Stations on the ground were even asked to keep their Q-S-O's as brief as possible so that the greatest number of hams possible could make contact with the space travelers.

And so it was that hams world wide were ready to honor K6DUE by making contact with the station in space that his years of effort helped to create. But over the entire weekend there were no reports of voice contacts with either Foale or his crewmate Alex Kaleri, U8MIR. Nor was the RS0ISS automated packet robot station activated either.

Why the crew was a no-show remains a mystery. Frank Bauer is certain that Foale knew about the event. In fact a message was received from KB5UAC that said he would try to be on the air for about 2 passes each weekend of December for the event. Bauer also received confirmation that final information regarding this past weekend was uplinked to the ISS crew on Friday, November 28th.

Bauer says that ARISS has discussed the situation with NASA. He says that there are two events that could have kept Foale from getting on the air. The first revolves around a broken exercise treadmill that KB5UAC reportedly spent a lot of his own time fixing this past weekend. The other is the widely reported crushing noise heard by the crew last week. It was in the aft end of the Service Module and its possible that the crew might have gotten instructions from the Russian team to determine the cause. This is being checked out.

Either way, Bauer reminds everyone that last weekend was only the kickoff and that the event commemorating K6DUE's contributions to manned ham radio space operations and that the event continues through the end of the month. He also says that ARISS will alert the ham radio community of potential opportunities for contacts as they become available.

For the Amateur Radio Newsline, Norm Seeley, KI7UP, in Scottsdale, Arizona for the Amateur Radio Newsline.

--

It should be noted that when it made the original announcement several weeks ago, ARISS said that crew participation in the event was completely contingent on the schedule of the on-orbit duties and other issues that might crop up on board the orbiting space station.  (ARISS)

**

RESCUE RADIO:  LA HAMS ASSIST CARDIAC VICTIM

Ham radio has helped to save the life of one of its own.  This, as members of a Southern California repeater respond to a users call for assistance.  Amateur Radio Newsline's Mert Garlick, N6AWE, has the details:

--

Almost every ham has heard of the Los Angeles 147.435 MHz repeater. Some call it notorious.  Others have given it the nickname of "the animal farm" for the lack of discipline of its users.  But on Sunday night, November 23rd, some of the tarnish turned to silver as bad manners gave way to human kindness and a life was saved.

--

Elmer:  "We were all sitting around and listening to the radio as we usually do in an evening.  All of the sudden, an individual keyed up a microphone whom we were all aware was having some health problems.  One of our listeners, Alan Sanchez, KC6QXA, immediately noticed the distress in this persons vloice.  He keyed up the mic and asked if he was OK.  He indicated he was having some difficulty breathing and needed help.  So, Alan immediately called Faith Gonzales who said to call 911 immediately because she was also very familiar with thisd gentlemans  health problems

--

That's Gary Elmer is KG6DVO.  He recently took over the system.  And according to Elmer, the work of his users did not end there.  While medical aid was in route, Mike Stavropoulos, KD6JTD, headed over to where the stricken ham lives.  He helped him get up, opened the security gate for the paramedics and directed them to the apartment.  Mike then followed the ambulance to the hospital and filled medics in on the hams condition.

Later that evening, the hospitalized ham went into cardiac arrest.  He was revived by his doctors.  Had he been at home the chances are that he would now be a silent key now.   Gary Elmer says that he is very proud of his users:

--

Elmer: "You know we like to tear it up and cut up, and have a good time. And you know that some people might of the fun we have. And yes, we have been in trouble with the FCC, but you know, when called upon, we too can rise to the occasion as evidenced by the actions of those three amateurs the other night."

--

As we go to air Elmer says that the ham is still in the hospital recovering. More important he is alive thanks to his friends on the Los Angeles 147.435 MHz repeater.

For the Amateur Radio Newsline, I'm Mert Garlick, N6AWE, also in the City of Angels.

--

In past years the Los Angeles 4-3-5 repeater has received a lot of negative press. This time the press is positive because this time it and its users probably saved a life. (ARNewsline(tm))

**

COORDINATION: REVISED SOCAL 2-METER BANDPLAN NEARING APPROVAL

Still in the Golden state, December 6th was the date set for a vote on a revised 2 Meter bandplan proposed by TASMA, Southern California's Two Meter Area Spectrum Management Association. Amateur Radio Newslines Bruce Tennant, K6PZW, gives us a sneak peak:

--

Among the problems the revised bandplan seeks to correct is recognition of the work of neighboring coordination councils. TASMA has always officially acknowledged the Northern Amateur Relay Council of California, but not those serving the states of Arizona and Nevada. California shares borders and R-F with those states and the revised TASMA bandplan will provide for such political recognition.

Also to be considered will be frequency assignments for specific modes and updating the recognized manned space operations listings. This to conform the Southern California bandplan with the world in relation to current Amateur Radio International Space Station operations.

This revised plan is the product of 2 years of hard work by the regional coordination body written with significant input from the areas Amateur Radio community. It already received a thorough public review at the 2003 ARRL Southwestern Division Convention last September.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

For more information please visit www.tasma.org. (TASMA, ARRL SW Commuinicator)

**

Break 1

We are the Amateur Radio Newsline, heard on bulletin stations around the world including the W6JW repeater serving Santa Clarita California.

**

RESTRUCTURING - SOUTH AFRICA: PROPOSED CHANGES TO LICENSE REQUIREMENTS AND PRIVILEGES

Another nation has taken the first steps in restructuring its Amateur Radio service. We have this report on what South Africa has done so far in welcoming codefree operations:

--

South Africa is taking a look at how to handle the question of Morse code testing until such time as it goes away and it looks as if it has an answer. It comes in a proposal to lower the Morse requirement from 12 to 5 words per minute. That is until applicants for the South African Zed U license will no longer need be tested for proficiency in Morse code.

Also proposed is the introduction of a new license class with the callsign prefix ZT. This license will not have any Morse code requirement. Rather, the holders of ZT licenses would have full VHF privileges and will be permitted to transmit with a maximum power output of 100 W on portions of the 160, 80, 40 and 15 meter bands.

For the Amateur Radio Newsline, I'm Ken Locke, N8PJN.

--

This interim solution would hold in South Africa until a final disposition on the future of Morse testing is made by that nations telecommunications regulators. (Q-News)

**

THE VEC PROGRAM: NEW GENERAL CLASS QUESTION POOL RELEASED

If you are planning to take a United States General Class written exam after next July 1st or know someone who is, then listen up. On and after that date tests will be based on a new set of questions just released by the Question Pool Committee of the National Conference of Volunteer Examiner Coordinators.

According to a news release from the committee, changeinclude the number of questions increased to 432 and release pf the pool in both Microsoft Word and ASCII text formats with no graphic files. Look for the new questions in cyberspace at www.arrl.org/arrlvec/pools.html. (W4WW, NCVEC)

**

## RADIO LAW: COMPLAINT LEVELS TO FCC RISE

The United States FCC has released a report on the inquiries and complaints processed by its Consumer & Governmental Affairs Bureau during the third quarter of 2003. According to the report complaint activity increased within all major areas except cable during the third quarter.

The largest increase occurred within Radio and Broadcasting where a total of 19,920 indecency and obscenity complaints were received. Complaint activity was also higher in all five top wireless categories, with the largest percentage increases coming in the service quality and equipment section. Its all in cyberspace at http://hraunfoss.fcc.gov/edocs_public/attachmatch/DOC-241435A1.doc (CGC)

**

## ENFORCEMENT: YET ANOTHER TOWER FINE

The fines for tower related violations continue. The latest is an $8000 fine issued to the Barinowski Investment Company, L P. Barinowski is the owner of a tower located near Savannah, Georgia. It was cited for failure to clean and repaint its antenna structure to maintain good visibility. (FCC)

**

## EMERGING TECHNOLOGY: NET-BY-PHONE NOW PLAYS MP3

The HandiHams say that there is now an MP3 file playback feature on the Net-By-Phone service that allows blind users who do not own a computer to access the Internet. This, by using a plain old vanilla telephone.

By way of example, a Net-By-Phone user accessing a website like Amateur Radio Newsline that has a link to an MP3 file can hear that file over the phone by simply selecting it. The system does not play the file right away, but it will download the file in the background and send you an e-mail when it is ready. When you retrieve the e-mail, the file will automatically play, just as a voice e-mail from a Net-By-Phone customer plays automatically.

Net-By-Phone is located in Chicago and is a fee based subscription service. You can find out more on the web at www.net-by-phone.com or call the toll free demonstration line at 1-800-358-7858. (HandiHams)

**

## HAM TRAINING: TRAIN THE TRAINER

49 youngsters are now licensed hams and are the newest members of Pennsylvania's Trinity High School Radio Club. This, thanks to a program called "Train the Trainer" by Pete Di Volpi, K3PD, a teacher named Sean Barnes, N3JQ and the Harrisburg Radio Amateurs Club V-E Team.

TheTrinity High School Radio Club operators station KB3JAG. Barnes started the radio club so lower classmen could get exposure to the hobby before they attend his physics class. He notes that the schools physics program and the principals of amateur radio teend to integrate very well.

The Harrisburg Radio Amateurs Club is a Special Services club in central Pennsylvania. It has only 100 members, but has seen over 100 new licensees produced in the last two years from their V-E and Train the Trainer programs. Teachers that are interested in Sean Barnes curriculum can e-mail him to SeanBarnesPolo@aol.com (W3UU, K3PD)

**

## HAMFESTS AND CONVENTIONS: FT.TUTHILL BECOMES WILLIAMS HAMFEST

The Ft. Tuthill Arizona hamfest has changed its name, its location and its date. Now the Williams Hamfest and ARRL Arizona State Convention, this premiere event will be held next July 2nd to the 4th, at the Williams Rodeo Grounds, Williams Arizona.

According to a news release from Mark Keshauer, N7KKQ, the move means that the hamfest sponsors can provide lower fees for tailgaters and campers, bigger spaces, a fireworks display and free admission. Most important, the famed Saturday night B-B-Q which is a staple of this show -- will continue. Sorry, that's not free but is among the best feeds found at any hamfest in the United States.

More information is on-line at www.arca-az.org/arca/images/press%20release (N7KKQ)

**

## HAMVENTION 2004: THE YEAR OF THE CONTACT

Hamvention planners have announced that the theme for 2004 will be the "Year of the Contact," and they are starting out by improving their own. Amateur Radio Newsline's Bill Pasternak, WA6ITF, has the details:

--

According to Hamvention General Chairman Gary Des Combes, N-8-E-M-O, his team has been making numerous changes to the shows web site, This, so that things like exhibits, general admission ticket sales and Flea Market spaces can be handled on line and the necessary forms simply downloaded.

And yes, we did say Flea Market rather than Outside Exhibits. As regular listeners know, a number of years ago the Hamvention made the name change to Outside Exhibits. Only one problem. The ham radio public never bought in to that new upscale title.

Hams have always referred to the Hamvention Flea Market as -- well -- the Flea Market. So, taking a cue from the many radio amateurs who have responded to the Hamvention request for input, show planners have gone back to the future. Des Combes says that as of now, the Flea Market is the Flea Market, once again.

Gary Des Combes tells Amateur Radio Newsline that this is only the first of a number of "Going Back to the Future" changes that the public has asked for and that they will get. In fact, "Going Back to the Future" will be a sub theme during Hamvention 2004.

The dates are next May 14th to the 16th. The location is the HARA Arena in Trotwood Ohio just outside the city of Dayton.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF, reporting.

--

Lots more information is on-line at www.hamvention.org. (Hamventionr)

**

BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

HAMS HELPING: THE NORTH POLE NETWORK

The holiday season brings hams a great opportunity. What better way could there be to introduce hospitalized children and their families to the magic of Amateur Radio--and to spread holiday cheer--than to arrange to have Santa visit them via Amateur Radio? Newsline's Joe Moell, K0OV, tells us about the North Pole Network.

--

Kids at Childrens Hospital of Orange County get holiday visits from clowns, carolers, firemen, baseball players and rock stars. But nobody is more welcome and anticipated than the ten Amateur Radio operators who arrive on the weekend just before Christmas. They come to establish a special ham radio link that makes it possible for patients to talk directly to the "real" Santa in his office next to the big toy workshop at the North Pole.

Members of the Hospital Disaster Support Communications System have been visiting children and adults in Orange County hospitals for over 25 years, and we think there's no better way than this to spread holiday cheer while showing our hobby in the best possible light.

Will your club be part of the North Pole network this year? If so, we have some suggestions for you. For instance, personalize each QSO. It would be easy to just put the mike in front of a little girl and instruct her to tell Santa her name and where she lives. But imagine how much better the QSO will be if Santa calls her by name right from the start. He's Santa Claus, so he should know! Before each year's North Pole Network session begins, the hospital therapists provide our North Pole station with the list of names for every room and bed, along with plenty of other tidbits about the kids that make good conversation starters for Santa.

You'll find lots of other hints for your best North Pole Network ever at our group's special Web site. The URL is long, but you can get to it with one click from the Hospital Disaster Support Communications System site at www.hdscs.org

The most important hint we have for you is: Don't miss the miracles. Every year, we have had at least one extra-special encounter that astonished families, staff and the hams. In a Santa QSO, children have spoken for the first time following brain trauma. Fevers have broken shortly after North Pole Network visits. A head injury patient started to eat after being encouraged to do so by Santa, and so forth. We don't know exactly how much the personal contact with Father Christmas has aided in patients' recoveries, but we are always grateful that our hobby can add a little joy and holiday spirit to patients and their families.

Again, the Web spot to visit is HDSCS.org, short for Hospital Disaster Support Communications System. From southern California, this is Joe Moell Kay-zero-Oscar-Victor for Amateur Radio Newsline.

--

More on this and other ham radio holiday activities in the coming weeks. (K0OV, ARNewsline(tm))

**

## INTERNATIONAL - AUSTRALIA:  VK2BVS HONORED BY VK PRIME MINISTER

Australia's Prime Minister John Howard and Foreign Minister Alexander Downer expresses gratitude for Australian ham radio training in developing countries.  This, by way of a certificate sent to Sam Voron VK2BVS in which the Australian Government expresses its gratitude to Voron for a  valued contribution towards assisting developing countries to reduce poverty and achieve sustainable development.

The honor was bestowed on Voron for the six months he spent in Somalia where he organized an Amateur Radio training course.  In addition to Howard and Downer, the certificate was signed by Dr.  Brendan Nelson who is a member of  Australia's Parliamentary House of Representatives. (QRZ.COM)

**

## INTERNATIONAL - SWEDEN:  NEW PAN-EUROPEN TV SHOW ON ITS WAY

Ham radio in Europe will soon have a TV show of its own.  Jeramy Boot, G4NJH, is in Nottingham, the UK, with the rest of the story:

--

The Swedish-based 'Club-TV' wishes to establish a monthly amateur radio magazine programme to be transmitted via digital satellite TV to most of Europe. Club-TV wants to cover all aspects of amateur radio and thinks there is a number of amateurs around Europe who can handle a video camera and edit the result.

Videos of 10 to 20 minutes would be perfect. There is no cost involved other than the tape as the broadcasts receive commercial sponsorship.

During the past year Club-TV has carried out a number of tests and broadcast a couple of programmes. The transmission is via the Sirius 2 satellite at 5 degrees East with a Symbol Rate of 6667 and FEC 1/2.

Jeramy boot, G4NJH.

--

Jeramy says that inquiries go to Ben Jockert, SM6CKU, by e-mail to sm6cku@parabolic.se.  (GB2RS)

## ON THE AIR:  NEW VHF/UHF PROPAGATION BEACONS NEAR ATLANTA

Back in the United States, Gary Bailey, WA4IOB, invites VHF operators to listen for his new 2 meter and 70 centimeter beacons.  The transmitter are located in grid E M 73 near Snellville, Georgia about 25 miles east of Atlanta. The mode is CW on 144.285 MHz and 432.352 MHz with 2 watts output on each band.  The 2 meter transmitter feeds a horizontal square loop. The 70-centimeter antenna is 4 half wave dipoles in a 90-degree horizontal quadrature configuration feedwith a 4-way power splitter. Both sign the call B B B W-A-4-I-O-B slash E M 73. Signal reports go to grb734@bellsouth.net (VHF Reflector)

**

DX

In D-X, LA5RIA will be active as JW5RIA from Bear Island until June of JW5RIA will operate on 160 to 6 metres CW, SSB and digital modes. Q-S-L as directed on the air. (RSGB)

Also, eight American operators are active from Christmas Island, East Kiribati, until the 7th of December. Call signs to listen for are T32MP, T32WW, and several others on all bands using all modes. They will have three stations with amplifiers and a large selection of antennas to pipe their signals worldwide. (RSGB)

**

THAT FINAL ITEM: A KILLER RENEWAL

And finally this week, the story of a ham who might have a hard time attending a license renewal hearing. Thats because he is in jail. Amateur Radio Newsline's Don Wilbanks, AE5DW, has more:

--

According to the ARRL Letter, the FCC has issued an Order to Show Cause to a Texas ham who is currently serving a 32-year prison sentence for the 1996 murder of his wife. The order released November 21st is the governments opening salvo in a hearing process that could end with the revocation of the Advanced class license of Roger Thomas Scaggs, W-5-E-B-C.

The FCC says that Scaggs' murder conviction raises very serious questions as to whether he possesses the requisite character qualifications to remain a Commission licensee. It also causes the agency to question whether his license should be revoked.

Scaggs is 64. He apparently was able to renew his ham ticket in the spring of 1998. This is the same year in which he was later convicted of murdering his wife. The FCC granted Scaggs' application for an administrative update. In this case, apparently a change of address from Austin to Gatesville, Texas.

The FCC only recently became aware of Scaggs' murder conviction, which could keep him behind bars at least until he's 75. Assuming that Scaggs indicates that he will appear for or be represented at a formal hearing, the FCC will follow up with a Hearing Designation Order.

The session itself will be held before an Administrative Law Judge and would consider evidence concerning the effect of Scaggs' felony conviction on his qualifications to remain an FCC licensee.  If no action is taken Scaggs license will next expire in 2008.

For the Amateur Radio Newsline, I'm Don Wilbanks, AE5DW, in New Orleans.

--

Scaggs was given the customary 30 days to let the FCC know  whether he plans to appear at the hearing.  (ARRL)

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm).  Our e-mail address is newsline @arnewsline.org.  More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org.  You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Jim Meachen, ZL2BHF, saying 73 and we thank you for listening.   Amateur Radio Newsline(tm) is Copyright  2003.  All rights reserved.

I've produced a comic novelty CD related to a topical issue - telemarketers and the National Do Not Call Registry. The concept is a series of off the wall recordings to play at the telemarketers instead of just saying no. The title of the CD is "Fun With Telemarketers".

It occurred to me to contact radio stations, especially those with "irreverent" hosts who might find something quirky like this of interest, obviously in hopes of getting a mention on their shows. Coming up on Christmas, this would make a great stocking stuffer.

Finding stations is simple enough but is there a typical protocol to approaching them with something like this? Would an e-mail or letter and perhaps a promo CD along with my website address be adequate or would a phone call be likely to be significantly more effective? There's a lot of radio stations, and the logistics and expense of calling a significant number of them by phone seems prohibitive.

If anyone's curious here's the website

http://starwatermusic.com

Any thoughts and suggestions will be appreciated!

| San Bruno, actually.  The SF booster is ON Sutro Tower, though, to fill in the
| hole left by Twin Peaks and such.
|
Ah, thank you. That makes more sense -- though, interestingly, a
1998 schematic from STI of the tower doesn't show the booster. The
FMs it shows are KFOG, KSOL, KOIT, KKSF.

I guess I had thought more FMs were on Sutro (such as whatever 95.7
is this year). But it is mostly a TV tower, after all.

Hello everyone,
I am a program director on newly oppened radio station located in Macedonia.
Right now i'm looking for a music service provider. I've heard about
RadioExpress, but does RadioExpress have any competition?

Radio Express is the most experienced in international business. All the
others have constant turnover and changes in ways of doing business. Radio
Express is the original international radio syndicator in the US, and its
founder was one of the co-founders of American Top 40... a good, long
history in satisfying radio needs.

we run small fm radio station  in croatia with some Behringer chain before
stereo coder but news will be
PC with MBL4 (latency maybe issue depends on program - music . talk , telco
hybrid ... ) but
for station on budget MBL4 now Sonos driven with decent soundcard will be
good choice
and since here in Croatia is hard to find second hand decent equipment like
compellor or prisms...

I looked at the listing for a country where I work and visit frequently,
Argentina. I found that about 80% of the listings were just wrong, and the
other 20% were inaccurate.

this site is rally out of date and full of totally inaccurate world radio
and TV data.

I've produced a comic novelty CD related to a topical issue - telemarketers and the National Do Not Call Registry. The concept is a series of off the wall recordings to play at the telemarketers instead of just saying no. The title of the CD is "Fun With Telemarketers".

It occurred to me to contact radio stations, especially those with "irreverent" hosts who might find something quirky like this of interest, obviously in hopes of getting a mention on their shows. Coming up on Christmas, this would make a great stocking stuffer.

Finding stations is simple enough but is there a typical protocol to approaching them with something like this? Would an e-mail or letter and perhaps a promo CD along with my website address be adequate or would a phone call be likely to be significantly more effective? There's a lot of radio stations, and the logistics and expense of calling a significant number of them by phone seems prohibitive.

If anyone's curious here's the website

http://starwatermusic.com

Any thoughts and suggestions will be appreciated!

---------------------------

Better get an email contact on your site.
I wanted to play your stuff on my new national pgm but couldn't contact you.

The "KB" refered to here is, of course, WKBW, Buffalo, as radio fans in the northeast USA know, in it's day was probably the best radio station on the air(sorry WABC fans).

This segment was recorded on 2/27/1973, the last night for Jack Armstrong, probably their best known personality.

WKBW, now WWKB, earlier this year returned to a music format, this time as an oldies station. Jack has returned to his 6P-10P shift. In this MP3 Jack has proven to be somewhat prophetic.

Anyone interested can just send me an email request. This MP3 is less than 500K.

Hey,

I'm Mike Jahn, the original New York Times rock critic (late 60s - early 70s). About the same time as I bought a scanner, my mother informed me that she saved ever rock review I ever did for The Times, and there were several hundred of them. Consequently, I started a non-commercial site, TALES OF THE ANCIENT ROCKER, and am scanning and putting them up on the Web.  I just posted a review I wrote about Janis Joplin's first New York concert backed by Full Tilt Boogie (Forest Hills Stadium, NYC, August 1970).

I thought you might be interested.

The Valerie Williams/Chip Moody/Tracy Rowlett blooper where her jaws freeze is, IMHO, the standard-setter for local news bloopers & blunders. But I seem to have lost my copy.

Does anyone have a copy of this they would be willing to share?

I tried to past a request a couple of weeks ago but it came through looking MIME-encoded or something...sorry.

Thanks for any help in locating this...I need a good laugh about now.

Steve Walker

Thu 27th Nov 2003

A television crew has been at Manx Radio filming a documentary which is due to be broadcast on Sky TV at the beginning of February.

It's about the story of United Christian Broadcasters in the British Isles, and the fact Manx Radio was the first station to air the organisation's programmes, between 1987, and 1989.

Director and Producer, Graeme Spencer, believes it's very important for stations to provide a wide range and choice of programming.

Hi Keith,

You're right, it _is_ trouble. You never want to cascade processors like that - the different processing algorithms in the separate boxes will end up "fighting" each other and your station will pump nonstop or flatten out or produce some other undesirable result.

Furthermore, even if you put a Compellor or a Dominator in your audio chain, you're still dealing with an 8100 that's at best 20 years old. Even disregarding the fact that there's now much newer tech out there, your unit has electronics that have been worn and softened by time.

My suggestion: for under $4,000 you can get an Omnia-3 that's all digital and will punch up your station very nicely. Check out www.omniaaudio.com.

What happenned to the Dolans?

I know they are doing some TV work, etc...but they gave up their radio show?

The always considered themselves 'radio people'.  I'm suprised they didn't keep their program on in one way, shape or form.

They are gone from flagship WOR Radio 710's lineup -- PD Maurice Tunick replaced them with Michael Sew- err - Savage.

The Dolans are still on the WOR Radio Network according to their website.

See http://www.worradionet.com for more details.

The show is still alive. While it's not on WOR radio, it's still, for
the time being, on the WOR Radio Network.

The "Radio Moron" is baaaaaaaakkk!!!

For sale:

Partial ownership in 1 KW fulltime AM in S. Oregon. City of about 20,000. On air for over 60 years. Station grossed over $227,000 in 2002. Full price is $100,000 asking WITHOUT the optional real estate.

This is a joint venture. Active or inactive investors with at least $10,000 each are welcome. We will accept ONE investor only with $5,000 however to get things started. The VERY FIRST investor will get a reward of some free extra stock for being a risktaker.

All investors would be on the board with full voting rights if desired. No individual can own over 49 percent and this applies to me too!

References:
a-Brazilian Bandit Airways. (Purchased one-way ticket to Rio, paid all cash, unmarked small bills)

b-My parole officer. Mr. Larson E. Rapp!
c-Wayne Greenhorn, Rightwing, New Hampshire. (W2NSE)

d-Half century Wireless association. (Rejected due to
low IQ) Ham since 1950. (Really!)
e-Resume on request. (Really!)

Call (478)741-1710 in Macon, GA or email. Only those
fully identifying themselves will be given callsign
and city of license.

Please! No "AM bashers" or other negative nabobs.

We are equal opportunity crooks! You will be equally
mistreated no matter what your race or religion or
favorite team! Hi!

I am NOT a shill, agent, broker, owner or part owner.
I am also not a crook!

73,

Meyer Gottesman, W6GIV
aka "The Radio Crazy"
aka "The Radio Moron"

For anyone interested, here's a reminder of upcoming DX tests; if
anyone
has any additions or corrections, please contact me. (BE SURE TO NOTE
THE TIME OF THE TEST; THEY ARE IN THE LOCAL TIME OF THE STATION)

Sunday, December 14, 2003 - WILM-1450, Wilmington, DE 1:05 am-3:00 am
EST (NRC).

Please remember, what's listed as being on, say, Monday *may* be what
you
think of as Sunday night!

If you try for (or hear) any of these tests, PLEASE post a message
letting
me know, and please, drop the station personnel a note, via e-mail or
snail
mail, thanking them for running the test! Also, for brevity's sake, I
didn't post the QSL addresses; if you need these, let me know!

Lynn.

<<<In addition, mic flags tend to get scratched up rather quickly, so they look like crap after a while. This is probably going to happen with the windscreen too, but hopefully won't be as noticeable.>>>

We got a new batch of mic flags in which the logos almost immediately became indecipherable due to heavy use. We got clear plastic with adhesive backing on one side, cut them to size, and -- voila -- you can still make out our call letters.

-Steve

About 9AM PT 12-12-03 Firesign Theatre on CNN Ticker (bottom of screen)

paraphrased:
Fabled Firesign Theatre to recreate comedy at UCLA April 1, 2004 [then a list of some guest performers]

Let's Eat: Feasting on the Firesign Theatre
America's Bravest Thespians and Troubadours Perform the Audio-Plays of the Firesign Theatre

Thursday, April 1, 2004 at 8pm

UCLA Royce Hall http://www.ucla.edu/
Tickets: $40, 30, 20
($17 students)

Hal Willner, Artist in Residence

Cast: John Goodman, Brad Hall, Howard Hesseman, Julia Louis Dreyfus, Nelson Lyon, Chloe Webb

Musical Guests: Captain Billy's Whiz Bang, Ralph Carney, Todd Rundgren, David Thomas of Pere Ubu,

Steve Weisberg's "kind of" Big Band...and other special guests!

The Firesign Theatre was and remains anarchic melodrama written and wonderfully performed by one of

the greatest gangs of four ever; Philip Proctor, David Ossman, Philip Austin and Peter Bergman. The

four Firesign records made between 1968 and 1971 (Don’t Crush That Dwarf, How Can You Be in Two

Places at Once…, I Think We’re All Bozos on this Bus and Waiting for the Electrician), conceived as

radio theater for the psychedelic era, constitute a dazzling comic epic whose plots and sub-plots

are still scrutinized, memorized and revered by legions across this great country “about which

we’re singing about.” From the mind of Hal Willner, who created the now legendary Harry Smith

Project and Halloween evenings in Royce Hall, comes Let’s Eat..., sequences from Firesign’s famed

recordings performed by a kaleidoscopic cast of actors, singers, writers – zealots all –

accompanied by onstage sound effects and musical flourishes. Among the evening’s guests: Ralph

Spoilsport, George Leroy Tirebiter, Nick Danger, Rocky Rococo, Nancy, Pico & Alvarado and a Bozo

named Barney.!

Lineup subject to change

Produced by Hal Willner and Janine Nichols

There is a great Retro Web Station, playing 60s 70s 80s hits as well as a lot of obscure tunes from the 60s and 70s. They also have CBS theater every night at 8PM and Nightfall at midnight!
There is no cost to sign up, and there is an automated request feature on the site!
There are upwards of 15 - 20 thousand tunes!
Dylan, Beatles, Captain Beefheart, Doors, Van Morrison, You name it, it's probably there. If it's not, e-mail them and they'll add it!
There is a Beatles block every two hours also!
There are two streams, one for broadband [56k] and one for modems [16k]!!
http://www.wilsonswebdesign.com/RadioShow/
Check it out, it's worth it!

For sale:

Partial ownership of 1 KW full-time AM radio station in S. Oregon. City of about 20,000 in a county of over 100,000 people. Station is on the air for over 60 years.

Full asking price of $100,000 WITHOUT real estate.

Joint venture: Active or inactive investors with at least $10,000 each are welcome. The first investor has the option to invest as little as $5,000. No individual can own over 49 percent. That rule applies to me too!

Station grossed over $227,000 in 2002. This is a steal!

A very funny article in today's St Louis Post-Dispatch -- and one
that will get the Conventional Wisdom Crowd's underwear all in a knot --
as one of the P-D's columnists, Daniel Finney, listens to
local (FM) radio for a week and writes of his impressions.

URL (line break after ReadForm&):
http://www.stltoday.com/stltoday/emaf.nsf/Popup?ReadForm&
db=stltoday%5Centertainment%5Cstories.nsf&docid=ED50E24E4273457686256DFA0052CF90

Highlights (fair use excerpts):

About country station KSD-FM: "One of the DJs let loose a pretty loud belch after shilling for McDonald's. Already, I can hear what I've been missing the past half-decade."

Of heritage rocker KSHE: "Along comes another commercial for mortgage refinancing. I begin to wish I had a house to refinance. The station returns to "Bob and Tom." Ah, it's good to be in touch with this local programming. I mean, it's not like I could hear a syndicated show from Indianapolis on the air in Des Moines."

Of AC KYKY: "A series of unremarkable soft songs played in a row until Blues Traveler's "Run Around." KYKY, like seemingly every other station, is giving away $10,000. I think about ways to spend the money - mostly on new albums so I won't have to wait for commercial radio to play a song I even kind of want to listen to."

Regarding modern-rock KPNT: "I'm told this is the station all the hip, young people are listening to. It sounds more like the station the marketing people want you to think all the kids listen to."

Finally, on KDHX: "Of course, the next day, I tune in to hear Serbian pop music and lose all my interest. Still, I've got to admire a station that tries to be all things to all people. There's got to be room for a place with a mix that eclectic."

Interestingly, no AM stations were covered in Finney's column (not even KMOX).

Hi Everyone,

I have a rig here which is a Superstar 3900 Black and was wondering if anyone could give me some advice?

I have heard that there are simple conversions which can be done to these to get extra frequencies by connecting and disconnecting different points on the circuit board? I have found losts of information on these mods but am unsure what their outcomes mean????

These are the mods which I found on internet, but what do they do or mean?

Open Clarifier
1)Find D75 and R135 and cut one end of them.
2)On the back of the clarifier knob follow the green wire to the PC board. Cut this wire from the PC board.
3)Now Solder this wire to a constant 8VDC source, like the collector of TR41.
4)Take the yellow wire and cut it from the knob. Tape this wire it is not needed.
5)This should make the radio TX/RX on the same frequency.

10 Meter Mod

1) Find IC7 near the PLL chip.
2) Get a SPST switch and mount it in the radio.
3) Solder a wire from one side of the switch to Pin #13.
4) Solder a wire from the other side of the switch to Pin #12.
5) That's it .Put the radio on 'Band D' then flip the switch to jump up to 28.300 to 28.500.

Tweak and peak
Audio Limiter - Cut R249
AM Power - VR13
SSB Power - VR12

If anyone has any advice or experience of doing this could they help?

This radio also has a small fault which the channel display keeps flickering and shorting on and off whenever it feels like it, does anyone know if this could be easily fixed?

Best Regards

Steven

Here's notice of an upcoming DX test...

PLEASE NOTE: Even if you don't hear a test, be sure and drop a card, letter, or e-mail to the station personnel, thanking them for going to the trouble to run a test!

Saturday, December 20, 2003 - WMOX-1010, Merdian, MS will conduct a DX test from 12:00 am - 1:00 am CST (UTC 0600-0700). The test will include Morse code IDs. Also, the code will be played 12:04am-12:06am, 12:30am-12:34am and 12:58am - 1:00am. Between the code breaks, the regularly scheduled program, "Coast to Coast AM", will be broadcast. Also, between the code breaks, local operator Jim Myrick will verbally identify himself and WMOX AM 1010 at various times, as in "This is Jim Myrick and you are listening to AM 1010 WMOX Meridian, Mississippi". WMOX is scheduled to broadcast at 10 kW during the test.

Reception reports(with return postage) may be sent to:

WMOX Radio
P.O. Box 5184
Meridian, Ms. 39301

OR
E-mail: smith@wmox.net

(Arranged by Bill Smith of WMOX.)

Also, if you hear a test, PLEASE, PLEASE let me know, via either e-mail or in rec.radio.shortwave! And if you send a reception report to
a station, please remember to include return postage with your report...

Lynn.

I heard a caller to a local fm station claim over the air that he was listening from out of the area on satellite radio.

1. Is this a widespread situation?
2. Why would a local station uplink to satellite radio?

Evan

The "Radio Crazy", it's baaaaaaak!!! Hi!

Partial ownership of fulltime 1 KW AM in S. Oregon for sale. City of about 20,000 with county population of over 100,000. Oldest station in that county. On the air for over 60 years.

Full asking price of only $100,000. This is a steal as the station grossed over $227,000 in 2002.

Joint venture (If you venture, you end up in the joint! Hi!)

Active or inactive investors with at least $10,000 each are welcome. The FIRST investor may put in as little as $5,000 and will get extra stock for being the risk-taker. No individual may own over 49 percent. This rule applies to me too.

There are some local stations being carried full time or in pieces by XM
satellite.  KIIS-FM in Los Angeles is one example.

Hello all.

I'd like to know what's wrong with WKMI 1360 here in Kalamazoo? I noticed during late October or early November that the sound on this station was very distorted. At first I thought it was my stereo equipment but when we purchased a new car and drove it home. We turned on 1360 to hear the Rush Limbaugh program while we were driving. At first I thought that the cars radio was defective but when I went into the house and switched on the stereo I got the same distorted sound.

While driving back from a trip to Detroit we switched on WKMI between Battlecreek and Kalamazoo and yes the same problem occurs. I know that it must be a problem with KMI because if you compare the sound of the Rush program with WBCK 930 and WKMI 1360 the sound on 930 is much better.

What's the problem?

I have XM and the Talk Radio is better with FREE AM
XM does not have any good host except Hannity.
The open road would be good if they dumped Bozo.
He makes us all look like dumbies.

Just like the rest of the stations......It started when they fired the professional, licensed engineers that used to run the station in a professional, high-standards manner.....even if they had to do it behind managements' backs....(c;

It's just awful what the FCC allows the big corporation radio moguls to get away with, now.

KIIS is going away from XM, soon...though the channel in question will
still carry the Rick Dees morning show.

The original poster was probably hearing a show on Orlando's "Real
Radio 104.1" (WTKS-FM), an FM talk station which has the bulk of its
schedule broadcast on XM's "Extreme" talk channel.  WTKS shows airing
on XM include their "Monsters of the Midday" show, along with PM
driver Jim Phillips and night host Drew Garabo, and I believe they're
all live on XM/Extreme.

Mike

I'm somewhat curious as to the type of format that radio broadcasts (such as talk radio programs) are currently stored at radio stations, or if it is a syndicated radio program, that copies of old shows are shipped to other radio stations. Also, is primarily all broadcast shows (including OTR broadcasts) in the same type of format these days? I've spent most of my time examining the formats of broadcast video media the past few months, so I do not have that much knowledge when it comes to radio (which is what I'm looking into now).
Anyway, thanks in advance for your time and patience and I hope someone can help me with this problem.

Amateur Radio Newsline™ Report 1374 – December 12,  2003

LISTENER ADVISORY:  PLEASE ASSIST IN THIS SURVEY

This is directed only to those who are not currently ARRL members.

Amateur Radio Newsline has agreed to help compile a survey which seeks answers for these two questions:

1:  If you are not a member of the ARRL, why not?

2:  If you were a member of the ARRL and quit, why?

If you are already an ARRL member, please do not reply as those conducting the survey only want to hear from those hams who never joined or who have dropped their membership.

Please respond by e-mail to hamvideo@juno.com before December 18th. And we sincerely thank-you for assisting in this survey.  (The Producers)

**

Amateur Radio Newsline report number 1374 with a release date of
Friday, December 12 2003 to follow in 5-4-3-2-1.

The following is a Q-S-T.  A new study says that the Executive Branch should take over the duties of the FCC, hams in Australia  could loose part of the 70 centimeter band and the K-6-D-U-E commemorative event is finally on the air from space.  Find out the details on Amateur Radio Newsline report number 1374 coming your way right now.

(Billboard Cart Here)

**

## RADIO POLITICS:  STUDY SAYS WHITE HOUSE SHOULD REGULATE RF SPECTRUM

A new study says that its time for the White House to replace the FCC as the nations regulator of the airwaves.  Amateur Radio Newsline's Bill Pasternak, WA6ITF, is here with the story:

--

The Center for Strategic and International Studies is a private research organization that analyzes global issues.  And in a recent report, it basically posed the rhetorical questions of -- what if the FCC went away -- and -- what if the Executive branch of the federal government -- the White House --  took over management of the nation's airwaves?

Would it be better or worse for America?  The Center says yes.  That in its view, such a change would definitely improve the way the finite resource called electromagnetic spectrum is managed, but critics have their doubts.  One told Amateur Radio Newsline: -- quote -- "You think the spectrum management is bad now, put it under the executive branch" -- unquote.

Be that as it may, the Center's report called Spectrum Management for the 21st Century was recently presented to Representative Tom Davis.  Davis is chairman of the House Committee on Government Reform and the  report recommends a number of steps to stop what the think-tank describes as the  increasing number of fights over existing spectrum space.

Among its recommendations are to develop a national spectrum strategy.  Increase research support for technologies that make better use of the spectrum and the controversial one.  Establish a spectrum oversight advisory board to implement full White House control of all spectrum related matters.

Davis said his committee will weigh the report's findings, along with the results of five ongoing General Accounting Office reviews and a Presidential Spectrum Policy Initiative study commissioned last June.  With all of this information for Congress to gather and digest, any change in who will regulate the nations spectrum is probably years, if not decades away.

With thanks to KC0DGY for bringing this to our attention, I'm Bill Pasternak, WA6ITF, for the Amateur Radio Newsline.

--

Currently, the Federal Communications Commission oversees commercial use of the electronic magnetic spectrum while the National Telecommunications and Information Administration handles all aspects of government use.  Its far to early to speculate on what effect -- if any -- such a change might have on Amateur Radio.

More information can be found on-line at http://www.gcn.com/vol1_no1/mobile-wireless/24166-1.html  (KC0DGY, GCN)

**

INTERNATIONAL - VK:  20 - 430 MHZ AT RISK IN VK-LAND

Australian hams may loose access to all of 420  through 430 MHZ.  This, as demands in this part of the spectrum by non-amateurs increases.

Q-News reports on an e-mail from the Space & Terrestrial Systems Team at the Australian Communications Authority to the Wireless Institute of Australia’s Federal President Ernest Hocking, VK1LK, last Tuesday.  It deals with an amendment that was made to the Australian radio regulations recently that prohibits the operation of amateur stations in the frequency band 420-430 MHz in certain locations.  This, to minimize the risk of interference to that nations Fire Brigades Network and the Mobile Data Radio Service emergency services that operate in this frequency band.

VK1LK told Q-NEWS that he will continue to adopt the view that the Wireless Institute of Australia is looking for primary allocation in the 430 to 440 MHz band -- or at least some part of it -- to protect ham radio interests.
(Q-News)

**

INTERNATIONAL:  BIG HAM RADIO EDUCATIONAL SUCCESS IN ALBANIA

Success reported for 33 students in an internationally sponsored Albanian Amateur Radio training project.  We go across the Atlantic to Jeremy Boot, G4NJH, is in Nottinham the UK for the latest:

--
The following update on the unique amateur radio training course that is ongoing in Albania has been sent in by Martti Laine, OH2BH, in Tirana.

"A memorable second week came to an end when the US ARRL delegation headed by K7WX and K9LA departed Tirana with many fond memories and new friendships taken back home”

"The theory exam was conducted on Wednesday the 26th of November with 33 students gaining a pass at the CEPT 1 level. Now the course will move on to pure amateur radio related subjects under the leadership of Uli, DJ2YA, while John, G3OKA, will head back to the UK after a job well done.”

Britain's RSGB deserves credit for their support of the first part of the program.  I’m G4NJH, in Nottingham.

--

Another wave of lecturers representing Finland and Germany has now  arrived. Also, Albanian authorities have released the callsign ZA1UT.  This is an acronym for the 'University of Tirana and is meant to assist in commemorating this extraordinary ham radio educational program.  (GB2RS)

**

HAM RADIO IN SPACE:  K6DUE OPERATING EVENT UNDER WAY

The K6DUE International Space Station Commemorative Event from the International Space Station is finally under way.  What's described as a challenging schedule kept the crew from getting on the air November 29th and 30th, but the ISS ham station was active during a pass on Saturday, December 6th.  We have more in this report:

--
According to ARISS International Chairman Frank Bauer, KA3HDO, numerous hams across North America and Europe were able to contact with Astronaut Mike Foal, KB5UAC or heard the ISS ham radio station downlink.  Those who did qualify for a special ISS Commemorative Certificate.  Information on obtaining one is on-line at www.rac.ca/ariss

KA3HDO also reports that the Phase 2 equipment setup has been completed and the gear activated at approximately 11:20 UTC on December 8th.  The new radio is a Kenwood D 700 dual band transceiver.  It appeared to operate flawlessly but the packet operation was turned off after Russian controllers requested that the crew power down the hardware while bilateral safety paperwork coordination is being completed.  Bauer says that hopefully, this will be completed quickly and that the long awaited packet operation will be on the air once again.

For the Amateur Radio Newsline, Norm Seeley, KI7UP.

--

The event commemorates the contributions of the late Roy Neal, K6DUE, to manned ham radio space operations and continues through the end of the month.  (ARISS)

LAW: HIGH TECH MUST FIGHT CYBERTERRORISM

The Federal government says that technology companies must cooperate in the battle against cyber terrorism.  This, according to Homeland Security Secretary Tom Ridge who said that the alternative is to submit to government imposed security regulations.

Speaking at a recent two day conference sponsored by his agency, Ridge said that the enemies of freedom use the same techniques as hackers do and the nations industries must be as diligent and determined as the hackers."

The two-day conference was the first formal brainstorming session to draft security guidelines and a cyberspace attack warning systems.  (Published news reports)

**

ENFORCEMENT:  FCC AGAIN WARNS AERO ENTHUSIASTS ABOUT UNLICENSED OPERATIONS

The FCC  is once again warning several hang gliding and sky-diving enthusiasts and the operators of a number of training facilities about the use of ham gear by unlicensed persons.  Bruce Tennant, K6PZW, reports:

--

In a letter to sixteen such California based flying groups, the FCC’s Riley Hollingsworth says that the Commission is receiving an increasing number of complaints that users of these facilities are operating Amateur Radio equipment without a license.  Hollingsworth specifically notes the use of hand-held radio transceivers as the biggest violation.

Hollingsworth says that while the FCC encourages the use of radio equipment for the safety of flyers, there are numerous alternative radio services that do not require a license.  These include the Family Radio Service and the Multiple Use Radio Service.

Hollingswoth adds that the use of Amateur Radio Transmitting equipment is also permissible as long as the users -- in this case the pilots and sky-divers -- are licensed in the Amateur Radio Service.  Translated, they must have a ham ticket to put an Amateur band transceiver on-the-air.

For the Amateur Radio Newsline, I’m Bruce Tennant, K6PZW, reporting.

--

Hollingsworth’s letter tells the groups that the use of radio transmitting equipment in a service where a license is required, without  obtaining a license, is a violation the Communications Act  and will result in criminal penalties.  He says that fines normally range from $7,500 to $10,000.  (FCC)

**

ENFORCEMENT:  HOMEOWNERS ASSN MUST FIND INTERFERENCE

And a big win for a Pennsylvania ham that could be precedent setting.  The FCC has written to the lawyer representing the Pine Ridge Community Association in the city of Stroudsburg.  The note informs the counsel that his interpretation of the Community Association's obligations under Part 15 was incorrect and that the Association is required to investigate the source of its radio frequency interference to an Amateur licensee residing within the Association’s property.  (FCC)

**

## AT THE FCC:  CHANGES AT THE CGB

Still with the FCC, word that Louis J. Sigalos has been named Chief and Sherry Dawson has been named Deputy Chief of the FCC's Consumer Affairs and Outreach Division of the Consumer & Governmental Affairs Bureau.  This bureau is responsible for conducting outreach to the American public on a broad array of telecommunications issues including the deployment of broadband services, the transition to digital TV, wireless phones and services including local number portability and much more.  The Division also promotes public awareness of the Commission's strategic goals and initiatives through consumer advisories and fact sheets, consumer forums and participation in conferences and workshops. (FCC)

**

## CHANGING OF HE GUARD:  JULIAN HIRSCH

Some sad news.  Famed technical writer Julian Hirsch, W2KFB, who spent most of his life testing the latest developments in stereo equipment and explaining them for Stereo Review magazine has died.

Hirsch was a graduate electrical engineer from Cooper Union University.  He and Gladden Houck created the Hirsch-Houck Laboratories to test electronic equipment in 1957.

Hirsch went on to author more than 4,000 reports on stereo systems, speakers, turntables and other equipment until his retirement in 1998. He was 81 when he passed away on November 24th.  (LA Times, other published news reports)

**

## HAM EVENTS:  HRU 2004 ON LONG  ISLAND NY

Mark Sunday, January 18, 2004 at 8AM, for the fifth annual Ham Radio University. The event is being held at the East Woods School in Oyster Bay New York with special forums geared to the non-ham as well as the experienced ham radio operator. The focus will be hands-on with many demonstrations on just about everything including ham radio satellite communications, low power operating using radios as small as a tuna tin and the latest in emergency communications.   There will also be a testing session for those who would like to take an FCC exam.

Again this year, Ham Radio University will be combined with the ARRL New York City and Long Island Section Convention.  Talk-in will be provided on the W-2-V-L repeater on 146.85 MHz and using an access tone of 136.5 Hertz.  For more information e-mail n2ga@arrl.org  (K2EPM)

**

## INDUSTRY NEWS:  FREE SUB TO THE UNEMPLOYED FROM ATVQ

If you are out of work and would like to have something to read, has Amateur Television Quarterly Magazine got a deal for you. How about a free one-year subscription to their flagship magazine?

To qualify, you must be normally employed and not retired. Also, the offer is limited to the first 100 to apply.

To take advantage of this one time offer, send a letter by U-S mail requesting a free subscription and stating that you are temporarily out of work. The address is Holiday Offer - ATVQ, 5931 Alma Dr. Rockford, IL 61108.

Sorry, the magazine will not accept e-mail subscriptions for this one time offer. (ATVQ)

**

INDUSTRY NEWS: JVC TO CLOSE US VHS TAPE PLANT

A not so happy Christmass for some employees of JVC America. This, as the company announces that it will shut down its VHS tape production plant in Tuscaloosa Alabama by January 31st.

The reason given for the closure is the loss of the VHS market to Digital Video Discs. About 115 people will be laid off from the VHS tape plant closing. JVC already has compact disc and DVD plants in Tuscaloosa and Kennesaw, Georgia that employ about 550 people. (KB4KCH)

**

BREAK 2

This is ham radio news for today’s radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

ARNEWSLINE(TM) NEWS: WE THANK YOU

I'm Andy Jarema, N6TCQ with a list of people to thank.

It's been since March that we did this, and we were in big trouble financially at the time. The following is only the first half of who helped us in April:

George Jacobs W3ASK of Silver Spring, MD. He's the former Propagation and Space Communications Editor of CQ Magazine.

Benton Bonney, W4PE of Orlando

David Ziskind, KE4QLH of Atlanta

Joseph Bartzi, Jr., KC8DKF of Wadsworth, OH, who since became a recurring contributor

The Hiram's Ham Amateur Radio Society of Reynoldsburg, OH

Donald West, W9DEW of Fortville, IN

Paul Lebzelter, K8PFL of West Branch, MI

Michael Leahan, N9PQK of Sun Prairie, WI

Gary Harrison, K0BC of Bolivar, MO

Kent Stutzman of Newton, KS

George Ancell, N5LEZ and B&G Communications of Electra, TX

That wasn't everybody in April- we'll continue trying to catch up in the weeks that follow.

Finally, in the entertainment industry, oftentimes one of the biggest stars is listed at the end of the opening credits, such as: "and starring Martin Sheen as President Bartlett."

We at Newsline also have one of those: "and starring Roy Blanchard, N5YHS," as an occasional, but extraordinary benefactor. Roy, you're amazing!"

Thank you to everyone. Your April response to our crisis was exceptional, and got us all the way to December. We promise to do our best to continue to earn your care and support.

A reminder that Newsline is a 501(c)(3), federally chartered, California non-profit corporation.  FCC regulations prohibit us from telling you exactly how to support us, but that information is on our website at www.arnewsline.org.

I'm Andy Jarema, N6TCQ.

**

ON THE AIR:  6 METERS IS BIG IN KNOXVILLE

If you live near Knoxville Tennessee and like to operate vintage ham gear, listen up.  This one is for you.

The Repeater Journal reports that a group of local hams have gone back to  the future and created a new Six Meter Nostalgia Net that meets on 50 point 4 Megahertz -- or should we say Megacycles in this case.  The gathering takes place every Thursday night at 8:30 P.M. local time and anyone with gear capable of running  full carrier A-M is invited to take part.

And what if you are not into A-M operation? Well the same group also sponsors F-M and S-S-B nets on Sundays. The F-M gathering takes places at 9 P.M. on the 53.770 MHz repeater. Five minutes after the F-M net is secured the S-S-B net takes to the airwaves on 50 point 200 MHz.

And if that’s not enough, yet another Knoxville area 6 meter F-M net has just started up on the 53 point 610 MHz repeater. It meets on Thursdays at 8:00 P-M local Eastern U-S time. (Repeater Journal)

**

## EMERGING TECHNOLOGY: RADIO RESEARCH: NAVY AND AIR FORCE AGREE ON NEW JOINT COMMUNICATIONS SYSTEM

The Air Force and Navy have agreed to merge their two formerly separate programs for the acquisition of improved radio systems. The result will be the development of a single family of radios designed to replace incompatible units in use across the services.

Called the Joint Tactical Radio System, this joint Air Force-Navy initiative is expected to produce more than 17,000 units. Initial deliveries of the new radios are expected to begin in late 2008. (Science OnLine)

**

## INTERNATIONAL - CANADA: VE9HC RE-ELECTED

Radio Amateurs of Canada reports that Hugh Clark, VE9HC was recently re-elected Section Manager in the Maritimes Section. This, for a two-year term that will begin on March 1st, 2004. Clark ran unopposed eliminating the need for a balloted election. (RAC)

**

## INTERNATIONAL - IRAQ: BAGHDAD COMES TO ECHOLINK

Ian Abel, G3ZHI, reports that Iraq is now on Echolink. Ian says that on December 4th he held a 90 minute cyberspace QSO with YI1SRA in Baghdad using the Echolink program. Laith was operating from an Internet cafe as full Internet access has yet to be widely restored in the city.

YI1SRA reported that he and fellow members of the Baghdad Radio Club are hoping to install a 2 meter repeater in the city. It would be linked to Echolink network allowing on demand around the clock contact with the city and provide communications back home for any foreign ham in Baghdad.

YI1SRA also now has e-mail. Messages to him go to laithtariq@yahoo.com (G3ZHI)

**

## DX

In D-X, now its your chance to QSO the real Santa Claus on the air. This, as station OH9SCL is active from Santa Claus Land near the Arctic Circle. OH9SCL will take to the ham radio airwaves from December 17th through the 21st. Operation will be 80 through 10 meters on cw, ssb, rtty, psk31 and slow scan television. The digital modes will be primary focus durning the weekend hours. Santa's ham radio helpers this year include Finnish amateurs OH2BH, OH2NWG, OH3BHL and several others. QSL via OH9UV. (Via e-mail)

Meantime, the ARRL says that its new Logbook of the World secure contact-verification database continues to grow. ARRL Membership Services Manager Wayne Mills, N7NG, reports that nearly 5000 users have uploaded logs containing some 25.4 million Amateur Radio contacts. This has resulted in more than 1 million QSL records to date. (ARRL)

**

## THAT FINAL ITEM: BRINGING THE DEAD BANDS BACK TO LIFE

And finally, its that time of year that the V-H-F frequencies are pretty dead as far as propagation goes. So here's as idea from Terry Hosack, W-A-3-L-T-B, on how to bring them to life.

Terry suggests over the V-H-F Reflector that you download a copy of the W-S-J-T program for digital high speed meteor scatter, weak signal, trop and E-M-E. He says to be certain that you get all the current updates including the new JT65 mode.

Hosack says that other than skeds, activity may be found on 144.140 and 50.260 Mhz mainly during contest and activity periods. If you are on the East Coast just beam west. Conversely, if you live out West, beam to the East and you might be surprised at what you might hear.

Terry says to just put the program in the monitor mode and see if you can decode any signals. If you find an interest in the mode you can buy or build an interface to actually transmit and help bring the dead VHF bands back to life.

The following web site is used for Skeds and chat about WSJT and meteorscatter: http://www.pingjockey.net/cgi-bin/pingtalk (VHF Reflector)

**

## NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline @arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Don Wilbanks, AE5DW, in New Orleans, saying 73 and we thank you for listening."  Amateur Radio Newsline(tm) is Copyright  2003.  All rights reserved.

XM took Kiss in-house a few weeks ago, except for Rick Dees' morning show. The rest of the day is hit after hit, on jockless autopilot, with no L.A. content. In XM's first year, its "Mix" channel was a simulcast of Houston's "Mix" (not sure of the call letters; I wasn't a subscriber then), but that was also taken in-house, in November 2002 -- again, it's fully automated and jockless. According to info found on the XMFan.com bulletin board (unofficial, of course), both of these channels are programmed by minority shareholder Clear Channel.

I believe Sirius carries WSM Nashville.

Howard

Yea, this is one of the things leaning me to XM.  I just moved from LA area
to Delaware and I'm missing SoCal radio :-(

Actually, I think they should switch to KYSR (Star 98.7), better music and
Jamie & Danny in the morning.  Then again if they put all the LA stations
from ClearChannel & Infinity I would be in radio heaven. ;-)

> I'd like to know what's wrong with WKMI 1360 here in Kalamazoo? I noticed during late October or early November that the sound on this station was very distorted. At first I thought it was my stereo equipment but when we purchased a new car and drove it home. We turned on 1360 to hear the Rush Limbaugh program while we were driving. At first I thought that the cars radio was defective but when I went into the house and switched on the stereo I got the same distorted sound.
>
> While driving back from a trip to Detroit we switched on WKMI between Battlecreek and Kalamazoo and yes the same problem occurs. I know that it must be a problem with KMI because if you compare the sound of the Rush program with WBCK 930 and WKMI 1360 the sound on 930 is much better.

Does this happen only at certain times of day? (and only if you're at some distance from Kalamazoo, maybe 30-50 miles) From mid-afternoon through mid-morning and overnight, sometimes a station's skywave signal interferes with its own groundwave signal. That's why Chicago stations will sometimes sound distorted when monitored 75-100 miles away. The distortion will change in nature over time (2-3 minutes) and will occasionally disappear altogether.

Alternatively...

does it happen only in certain areas, clearing up in other parts of town? Some stations have directional antennas that are too selective - more directional on 1360 than they are on 1359 and 1361. The result is that if you're in the "wrong" direction from the station - a direction in which they don't send most of their signal - you may receive "too much" audio by comparision to the "carrier" signal. This results in distortion. WKMI is only directional at night, so if this is the reason, the distortion should disappear during the day.

Of course, it's also very possible the station is broken<grin>!

Stay below 28 MHz!

> Tweak and peak
> Audio Limiter - Cut R249

Do NOT do this or you will splatter all over. If the modulation seems weak, try a power mic.

> AM Power - VR13
> SSB Power - VR12

Using a watt meter tune for max, then back it off a bit. If you're going to use an amp, set AM for about 3 watts and SSB for no more than 10 watts for a clean signal.

As another poster said, it's probably a cold-solder joint on the back of the display board. If you're good at soldering PC boards, you could touch all the solder points up with a fine-tipped iron and probably fix it.

Hannity isn't an XM product. The show is owned by ABC and is just carried by XM. Same with Truckin' Bozo (Clear Channel). Both can be heard on terrestrial radio.

>He makes us all look like dumbies.

I'm biting my tongue. Taking a shot at this one is just too easy.

To ansdwer your question.

First of all it's an all day thing. It seems to be all over town. About a
month ago I was riding out to a place where I play piano music for some
older people at an assisted living place on the other side of town and the
distorted sound never cleared up from my house to the other side of town.

As I stated earlier the distortion was heard as far away as Battle Creek. To
discribe the sound would bew like running a radio with batteries that are
about to die. You know that raspy sound that a station makes when the
batteries are about to die.

It's definitely a problem at the station. Many AM stations these days are only on the air because if they aren't, the FCC will take the license. The way those owners operate them, I'm surprised they just don't give the license up anyway. It's poor maintenance and a lack of caring on the part of the person(s) who should care and fix the problem.

Talk Radio shows with time value are almost always carried live via satellite. Some shows, even time sensitive ones, are often refed either by the network or stored in a digital automation system at the station for broadcast later. Networks also store the show in digital form if they provide the refeed. Refeeding a time sensitive show can be embarrassing when the host is talking about a breaking news event.

Shipping shows from one station to another is known as "bicycling" and I haven't seen that done in at least a decade.

> Also, is primarily all broadcast
>shows (including OTR broadcasts) in the same type of format these
>days? I've spent most of my time examining the formats of broadcast
>video media the past few months, so I do not have that much knowledge
>when it comes to radio (which is what I'm looking into now).

The primary media is digital. Nearly every station has a large hard drive storage system used to store commercials, music and any other material it may need. The material can be called up manually, live assist, or fully automated.

The other storage media are CD, minidisc and, occasionally DAT (digital tape). Many stations have no analog audio tape in use. There will probably be a reel-to-reel or cassette machine gathering dust just in case a tape comes in from the outside. Some brokered (pay for play) and religious shows are delivered on cassette.

Gaining in popularity is MP3 because it can be sent over the Internet. Many shows allow stations to go to a web site and download the current or archived shows. If the file is sampled at a decent rate it's broadcast quality.

Londoners and those connected to the internet will be able to listen to the capital's first weekly Jewish show on the FM frequency in nearly five years, as leading UK Jewish website SomethingJewish (www.somethingjewish.co.uk) takes to the air on 104.4fm from Sunday December 21.

Broadcasting on London's first radio art station Resonance 104.4fm, The SomethingJewish Show will go out each and every Sunday from 3.30pm to 4.30pm on Resonance104.4fm and on the internet at www.resonancefm.com

A mixture of arts and entertainment, The SomethingJewish Show will feature the best Jewish performers around, details of the best events in town to catch Jewish arts and entertainment and will also seek to showcase new and unsigned Jewish talent.

With a diverse Jewish playlist featuring Jewish artists, artists who have a Jewish connection or artists that are inspired by Jewish influences, The SomethingJewish Show aims to appeal to anyone who is looking for something fresh in the Jewish arts world.

For more information: www.somethingjewish.co.uk

I've noticed that the European broadcasters do that windscreen printing a lot instead of printing the station name on the mic flag.

Maybe it's cheaper to print on a foam than it is on plastic?

Let's not get carried away.  I can hear them fine and they suck.

What's different today is that there are more formats that you can skip
over looking for something listenable.  I'd like an all-loogthung
station.

For sale:

Partial ownership of 1 KW full-time AM in Oregon.

(The "Radio Crazy" is still loose! Hi!)

Joint venture. Active or inactive investors with at least $10,000 (ten grand)each are welcome. No individual can own over 49 percent. This goes for me too!

Station is on the air for over 60 years. City of over 20,000 with county population exceeding 100,000. It billed over $227,000 in 2002.

They are asking only $100,000 WITHOUT the real estate.

I am NOT a shill, broker, agent, owner or part owner. I am also not a crook. (Name of my parole officer and Brazil one-way ticket serial number on request!)

"AM bashers" and other negative nabobs please deposit funds in my unmarked Swiss bank account. Others will place funds in the escrow account of communications attorney.

Tel: (478)741-1710 in Macon, GA

73,

Meyer Gottesman, W6GIV
aka "The Radio Crazy"

Not to mention the extended psychological analysis to find out why
anyone would want to moderate such a newsgroup. You'd find it more
interesting and productive to spend your time trying to find the
aliens the gummint is hiding.

FWIW, Oregon is a terrible state for small business owners.  Income and property taxes are both extremely high.  The state legislature recently added to the burden by imposing a 3% income tax surcharge.  This on top of a personal state income tax rate of 9% for most people.  Corporate taxes are even worse.

Government regulations and restrictions are also excessive and burdensome. Since Oregon government on all levels is full of environmental extremists (remember the Spotted Owl controversy?), you're not likely to be approved for ANY real estate venture that involves towers or radiation of RF energy.

Of course there is no sales tax and car tags are only $30 for 2 years.  But trust me, you'll pay for this many times over when you get your income tax, property tax, and workers compensation bills.  Been there, done that, got the hell out of there!

> The reference to reverb is amusing -- in the early 1970s I recall
> WCKY as an easy-listening station -- with reverb!

WJIB 740 AM Stereo in Cambridge/Boston, MA -- one of the few, if not
the last, Easy Listening/Beautiful Music stations on the AM band in
the USA -- uses stereo reverb.  It's not too heavy, but you can notice
it.

> That's only the *second* most inappropriate use of reverb I've ever
> heard -- the most inappropriate was when KPRC in Houston
> was a news/talk station in head-on competition with KTRH -- and
> used reverb in 1985 and part of 1986!

FM talk station "New Jersey 101.5" (WKXW-FM Trenton, NJ) uses a
healthy dose of stereo reverb during their talk programming as well as
the Oldies music they play on weekends.  It does get a bit annoying,
especially if you're listening with headphones.

Definitely not the last.

KWXY AM 1340 in Cathedral City/Palm Springs is still doing Beautiful Music,
simulcast with
KWXY FM 98.5 ... with live air personalities, no less.

WCBN WILL DESTROY YOUR FEEBLE FORMATS

WCBN - 30 Years of Freeing Your Mind - Listen to us online!

WCBN is the University of Michigan student-run community freeform radio station in Ann Arbor, Michigan. We broadcast at 200 watts to the University and its surrounding communities from the basement of the Student Activities Building in downtown treetown.  We have been broadcasting a genre-less overview of music, news, and public affairs for 30 years.

WCBN's musical format is freeform, with some specialty shows. Freeform involves all different kinds of music, including jazz, reggae, blues, hip-hop, country, rock, and just about everything else under the sun. Instead of telling our DJs what to play, we allow them to select their own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an intelligent fashion, and show links between musical genres.

Click here to listen to our live WCBN-FM Ann Arbor broadcast!

Thursday's (Nov. 27)  Special Ed Angstgiven radio collage will be
from 3 PM thru 7 PM. It should be concentrated

I strongly recommend listening to the show that follows from 7 to 8
PM.  Arwulf's "Face The Music"

Ingredients:
Semigestible vintage Thanksgiving, Military Food and Meat Industry
propaganda film soundtracks
Table manners and nutrition educational films
A few hundred sound effects
Reconstructed Julia Child and others recipes and instructions
Various species of sounds and spices
A few tablespoons of "accessible" music pieces for consistency and color

fold, spindle, mutilate, then combine ingredients,
simmer in FM radio   set to 88.3 in vicinity of Ann Arbor, Michigan
- or -
deep fry in computer linked to http://www.wcbn.org/listen.html from 3
to 7 PM, EST. Thursgivingday, Nov 27
*(Eastern Standard Thyme)

I won't be around for much of the day 11/27 - it's Thanksgiving here in the US. Some submissions may not be posted until Friday.

Happy Turkey day!

> purchase of the station and license transfer by the FCC ?"

I believe he has already addressed that question in this forum. Perhaps you are new here. He is simply trying to put together an investment group of fellow broadcasters to buy a station, and from time to time finds a station that is available. It has already been well established here that the majority of contributors to this forum do not mind Meyer's postings. Since new people subscribe to forums all the time, he repeats the postings from time to time. (sort of like radio advertising and music playlists - it keeps repeating all the time)

If you have a genuine interest in possibly investing, you can contact him directly and I'm sure he'll be glad to call you and answer all of your questions. If you're simply trying to call him out in this forum for the purpose of flaming him - which is what it looks like - he'll probably ignore you, as would I if I were him.

I for one hope that someday he succeeds, and if he doesn't, at least he tried. Good for Meyer! It's easy being a cynic, but how many of us have had the courage to go out and actually pursue a dream? If Meyer ever gets a station, that's one station Clear Channel or Cumulus is not going to have, and one community that will no doubt have a radio station with a LOCAL flavor, and not giving out one prize in a national contest and making it sound like is was a local winner, like Cumulus recently did.

[ Moderator's Note: Or like Clear Channel used to and, to a certain extent, still does. ]

To the person that asked how many of my AM investment deals came to fruition, one did so far. WAJF AM in Decatur, AL. (Near Huntsville). Class "C" AM, 1490 KHz, 1 KW, fulltime. I was then paid $5500.00 to scram and now have no connection with the station.

I am not a crook, shill, agent, broker, owner or part owner.

I am Meyer Gottesman, aka "The Radio Crazy" aka W6GIV from Macon, GA. I was born in Brooklyn, NY and am a semi-retired broadcast engineer. FCC commercial license since age 16. Ham since age 15.Age 68 now. Active and healthy.

References from Parole Officer on request. I have to run now, need to pick up my one way ticket to Rio!

73,

Meyer Gottesman, W6GIV

Interestingly, this may be among the poorest AMs of its class in terms of coverage. The day signal covers Cat City and most of Palm Springs. By the time you get to Palm desert, it can be noisy. At night, it gets out maybe 8 or 9 miles. Which is what you get with a high-band signal broadcasting from a desert.

There is no Coachella Valley station that covers the entire market, day or night.

Good for Meyer!  It's easy being a cynic, but how many of us have had the courage to go out and actually pursue a dream?

Here here Paul.

I have no problem with Meyer's post. He's doing a service.

I can say that I have previously invested in one of his station deals and helped succeed in putting a former dark station back on-air (WLYC 1050 in Williamsport, Pa) However my two US partners and I had to get out when we realised through lack of funding that we could not take the old girl into profitability.

However it is still on-air, and that's the main thing as far as I'm concerned.

I learned a great deal from that exercise and am currently back looking for the next crack of the American corporate whip.

Meyer, thanks very much for the prompt & candid reply.

Another poster mentioned that you had answered this previously, and while I am a not a "new" reader of this newsgroup (quite the contrary) I did not recall seeing that message.  If that was the case, please accept my apologies and assurance that no malice or 'flaming' was intended.  Although there's been some discussion in the past as to the appropriateness of your posts in r.r.b, they've always been on-topic and entertaining to boot.

I guess I was just curious as to how your Internet approach to 'marketing' was succeeding, as compared to the more traditional ways of brokering these sorts of deals.

Did you ever try this with a TV station (yes, I know you're the ***Radio*** Crazy but after all, the visual TX is just AM with a fancy sideband filter and the aural TX is good old FM) ?

In any case, thanks again and I hope you have a nice holiday !

This is very interesting. I might ask my station rep from Clear Channel who's big in my area.  She's easier to talk to than the rep from the "dollar a holler" CHR station in the bottom of the TV studio.

I don't think we can assume there is a homogeneous 25-54 age set. We can cleave it in half at age 35 or 40.  But don't sell oldies short; they are still in demand.

I wish that these morons at the stations would find out that it isn't microcasting any more than it was buying listeners with contests a la the Eighties.  What Rush Limbaugh says (and I agree) is that we need more fun media personalities. Music is great but the older end of the 25-54 demographic wants someone fun.

I am biased in this arena as I collect airchecks and operate an aircheck station at live365.com. But darnit it's true; some of us want something besides a wireless MP3 jukebox (which is what radio's become).  And people are getting burned out on slender playlists too.

Another problem is a lack of decent new music coming out. We are trying to get the baby boomers' kids to listen and they unfortunately like the rap crap and commercialized alternative nonsense.  Thus we are ignoring older people also likely to spend money.  I am 37 btw.

Let's return to good old Top 40 (or if not, CHR) radio and its wonderful disk jockeys. That may be a hidden secret not many want to exploit.

Thanks
Ken

It's about time someone made radio oldies fun again. Hopefully there will be a satellite radio station that makes oldies fun and there will be more stations like this.  In fact, come to think of it, I have listened to 1530 at night here in GA.

I wonder if they use PAMS Series 18 jingles?  I just love those jingles and those old deeejays.  I think we are too hard on Clear Channel. There is a horrible local yokel station in my GA town that downloads off satellite (and pulled a Yankee out of the ad sales pool to get a big city look) But there is a Clear Channel station that has better personalities.

For more info on old music radio check
http://www.mindspring.com/~kturnerga/aircheck.

Before moving to California, I was amazed at the amount of truly local stuff on WZOO-FM Ashtabula, Ohio and WKDD-FM Akron, Ohio - two small-market stations bought by Clear Channel a couple years ago. Very focused on local issues. WKDD was, and continues to be, one of my all-time favorite stations. Clear Channel did a good job of not changing that.

Here in the High Desert, KZXY-FM Apple Valley is also a small-market station owned by Clear Channel. I think they do OK too. Their sister AM talk station had round-the-clock live coverage of the wildfires in this area... lots and lots of good information.

I'm not saying that there aren't stations they don't completely screw up, but there are some good ones out there.

What amazes me is that Infinity owns a station out here... I don't recall which one.

Clear Channel and Infinity are both run basically "by the numbers." That is to say, local managers can do pretty much what they want as long as they meet their cash flow budgets. Conversely, they must cut anything and everything if they don't, regardless of the impact on operations. This style of management means the quality of the local GM is really crucial. And as anyone who's been around the business a while knows, the quality of general managers is wildly variable.

>What amazes me is that Infinity owns a station out here... I don't recall
>which one.

Infinity and Clear Channel both scooped up lots of marginal stations by buying entire groups to get the better ones. Where they differ is that Infinity really does not want to be in smaller markets, whereas CCU seems to want to own everything it possibly can, everywhere. However, even CCU has been sloughing off a few lately. The 1220 AM in Canyon Country, CA was sold back to its former owner for less than a third of what CCU paid for it. He was making money operating it -- they never did.

Neither WSAI or WCPO/WUBE used Series #18, so anthything is possible.
Currenbtly they are using resings fo the Pacific And Southern TM
package first used when on 1360.

They have some other TM items still to used on air.

To hear resings of classic PAMS in the internet, try www.kmin980.com
and click on Listen Now.

They are live in the am and pm dirve and have otehr live segments
through out the week. Sadely, like most braodcasters today, they rely
on computer automation during other times. Owner is a good friend and
really cares about locally owned radio.

We use Sony wireless mics a lot, and if you put a typical plastic mic flag on the body, then the user's hand is placed too close to the antenna, which interferes with transmission. We figured that one way around it was to have our calls placed on the windscreen itself. In addition, mic flags tend to get scratched up rather quickly, so they look like crap after a while. This is probably going to happen with the windscreen too, but hopefully won't be as noticeable.

Oh my....

How did this thread deteriorate.  Don't get so upset folks.  This is what I found from the ITU.  Several countries are signatories so I would guess it is the most accurate info.

World Band - Frequencies allocated for International Broadcasting.

Wide Band - A radio capable of receiving or transmitting on a large
spectrum of frequencies.

Shortwave - Frequencies allocated for International Broadcasting
including utility, military and civil brodcasting stations.

MF (Medium Frequency)- Defined as any frequency or mode between .3 Mhz
to 3 Mhz.

HF (High Frequency) - Defined as any frequency or mode between 3 Mhz
to 30 Mhz.

Hope this helps.

Larry....

Amateur Radio Newsline™ Report 1372 – November 28,  2003

Amateur Radio Newsline report number 1372 with a release date of Friday, November 28, 2003 to follow in 5-4-3-2-1.

The following is a Q-S-T. Australia plans a celebration to welcome no-code, a New Zealand ham plans an Amateur Radio replacement for a frequency standard station and the U-S-A is on the verge of banning unsolicited junk e-mail.  Find out the details on Amateur Radio Newsline report number 1372 coming your way right now.

(Billboard Cart Here)

**

RESTRUCTURING:  WELCOMING NO CODE “DOWN-UNDER”

Last week Australia’s decided to abolish code exams on the 1st of January. Now its planning a world-wide on-the-air celebration as 2003 gives way to 2004 and Morse testing disappears.  Jim Linton, VK3PC, has the story and an invitation for you to take part:

--

On New Year's Day 2004 Australian radio amateurs will gain access to the High Frequency bands using licenses that don't require the passing of Morse code telegraphy tests.  The Wireless Institute of Australia invites the world's amateur radio fraternity to join an on-air celebration of this special occasion.

To celebrate the event, there will be a "WIA Welcome to HF QSO Party" beginning at 0001 Australian Eastern Daylight Time and conclude at 2400 UTC on New Year's Day - a total of 35 hours.  The VK radio amateurs appearing on HF bands for the first time can be  identified by three-letter VK callsign suffixes that begin with the letters  H, T, U, X, Y and Z.

WIA amateur stations will be on air to join the HF QSO Party, and these have two-letter callsign suffixes "WI" or three letter suffixes starting with "WI." Listen for the call "CQ WIA Welcome to HF QSO Party".

For the Amateur Radio Newsline, I’m Jim Linton VK3PC.

--

Many in Amateur Radio have been campaigning for years to have code tests removed as a license requirement to operate on amateur bands below 30 MHz. For Australia this will happen on the 1st of January, 2004 with this very special on-the-air celebration.

(DO NOT READ. Find out more by e-mailing hfqsoparty@wiavic.org.au (Q-News))

**

INTERNATIONAL - NEW ZEALAND: A PROPOSAL TO REPLACE VNG

Still down-under, word that well known "Digital Modes" Amateur, Murray Greenman, ZL1BPU, has proposed that New Zealand and Australian hams put together a network of simple and inexpensive transmitters. This, to provide a high accuracy Standard Frequency Service to replace the VNG standards station that has now gone QRT. Amateur Radio Newslines Jim Meachen ZL2BHF is in Auckland with the details:

--

Amateurs in the South Pacific have for many years relied on VNG transmissions as a prime source of accurate frequency reference. With the closure of VNG in December 2002, the sole remaining precision signal source in our area is WWVH, in Hawaii. Unfortunately the WWVH signal quality in the South Pacific is generally too poor for reliable use, either to zero beat a simple calibrator, or using more sophisticated computer based techniques.

ZL1BPU says that a series of tests over the last two years has shown that simple low power carrier transmissions on the 80m band would fulfill most of the requirements of a Standard Frequency Service:

--

Greenman: “Using simple HF transmitters that I've designed, we have confirmed that low power transmissions are very useful, for both calibration and propagation study, up to at least 3000 km range.

Anyone can monitor these signals, using a stable receiver and freely available software to look for small frequency shifts that accompany each propagation path. Classic effects such as multiple paths with different refractive indices for different signal polarization’s are easily observable.

Doppler shift is particularly marked around sunrise and sunset. Observing these signals gives a better understanding of propagation, which is the key to accurate on-air frequency measurement."

--

The Service now operates on a test basis with transmissions from a high precision local reference on an exact kHz point 80m frequency using a carrier power of 1-5W. The Transmissions are identified in Morse every 30 minutes. Operation is from a different geographical location each weekend. Transmission times are announced and coordinated beforehand by e-mail.

Reporting from Auckland New Zealand I'm Jim Meachen ZL2BHF for Newsline

--

ZL1BPU adds that these are privately owned, operated and attended test transmissions, not beacons. Establishing a Standard Frequency Service formally, perhaps under the auspices of the NZART, might be considered in the future. (NZART News)

**

COMMUNICATIONS LAW: HOUSE PASSES ANTI-SPAM LAW

Here in the U-S-A, Congress has moved closer to passing the first-ever federal protections against unwanted commercial e-mails. This, with the House passing a bill on Saturday, November 22nd that would impose new limits on sending direct advertising offers -- commonly called spam mail.

Approved on a 392 to 5 vote, the measure would prohibit senders of unsolicited commercial e-mail from disguising their identity by using a false return address or misleading subject line. It would also prohibit bulk mailers from harvesting addresses off websites and require such e-mails to include a mechanism so recipients can indicate they do not want future mass mailings. Penalties for failure to comply could be up to five years in prison in some circumstances.

The House bill largely mirrors ant-Spam legislation the Senate approved last month. Supporters hope that slight differences between the two measures can be resolved before Congress adjourns for the year. The Bush administration says that it supports the anti-spam efforts. (Published news reports)

**

Break 1

>From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the Montgomery Amateur Radio Club repeater serving Rockville Maryland.

(5 sec pause here)

**

RADIO LAW: THE FCC ON PRIVACY OF INFORMATION

The FCC has put in place a temporary policy that will keep the public from knowing who is facing enforcement action by that agency. Amateur Radio Newsline’s Bruce Tennant, K6PZW, picks up the story:

--

Don’t look for names and call signs of alleged regulatory violators to be released by the FCC anymore. At least not for a while. This is because the agency has revised the format in which it's supplying the media and the public with information regarding alleged regulatory scofflaws, including those in the Amateur Radio service.

The revised temporary policy is based on privacy concerns within the FCC. Until further notice, the agency says that it will only provide the location where a violator lives along with a very brief synopsis of the action taken.

Following a policy review now taking place the FCC says it will announce a new privacy policy for all future information releases.

For the Amateur Radio Newsline, I’m Bruce Tennant, K6PZW, reporting.

--

No timetable has been announced for the privacy policy review to be completed. (FCC)

**

ENFORCEMENT: NO MORE ADS AND WE RENEW YOUR LICENSE

And without mentioning any name or callsign, the FCC has acted in a pending non-certified radio equipment marketing case. This, as a Tomah, Wisconsin, licensee is informed that renewal of his Technician license would be granted on the condition that he permanently remove from the World-Wide-Web certain information.

The FCC says what it wants removed includes any advertisements for, or references to, the sale of transmitting equipment that operates, or is intended to operate, on frequencies in the Citizens Band service. Also references to gear for any other radio service requiring the use of certified transmitting equipment but which has not been certificated by the regulatory agency.

If he says O-K, he gets his ticket renewed. If he refuses to comply, the FCC says that his renewal will be designated for hearing before Administrative Law judge. (FCC)

**

ENFORCEMENT: PA REPEATER PROBLEM

The FCC has also warned a Lewistown, Pennsylvania, Extra class licensee that he must heed the request by a repeater owner to stay off that system and that technical problems with his own repeater must be corrected immediately.

And in an Order issued by Philadelphia FCC office that licensee was told that his repeater could not operate under automatic control until further notice. He was also requested to provide operational information about the repeater, including names and addresses of control operators. (FCC)

**

## ENFORCEMENT: TOWER VANDAL FACES 27 MONTHS IN PRISON

And you can just about write the words “the end” to the case of a Washington man accused of tampering with more than 20 high voltage power towers in four western states that we have been reporting on. 62-year-old Michael Poulin has admitted the charges and has entered a plea bargain agreement with federal prosecutors. As a result, he will serve no more than 27 months in prison. He also faces a possible fine of $500,000. Without the plea agreement he could have been sentenced to jail for up to 10 years. (CGC)

**

## RADIO LAW FOLLOW-UP: THE NEVADA HIGHWAY PATROL VS THE FCC

Some enforcement news of a different kind by way of the Reno Gazzette Journal and the C-G-C Communicator. Both bring word that the Nevada Highway Patrol has turned over a 255 page investigative report and 2,500 pages of supporting documentation to that states Attorney General's office. The Attorney General will now consider the possibility of criminal charges will be determined in connection with the police agency’s use of a radio system on frequencies for which it holds no licenses.

As previously reported, the highway patrol launched the investigation earlier this year when it was discovered that it didn’t have the proper licenses to operate the $14 million communications system built for it in 2000. The FCC has threatened to fine Nevada and block the states future license requests if the Nevada Highway Patrol does not quickly abandon use of the unauthorized frequencies. (CGC)

**

## WITH THE ARRL: 2004 ELECTION RESULTS

The ARRL has announced that Frank Fallon, N2FF, retained his seat as Director of the League's Hudson Division. This, by defeating Vice Director Steve Mendelsohn, W2ML, by a vote of 1933 to 1470.

Ballots were counted November 21 at ARRL Headquarters. The Hudson Division's was the sole contested seat in the current director-vice director election cycle.

Incumbents running in the Central, New England, Northwestern and Roanoke Divisions ran unopposed and were declared elected. Joyce Birmingham, KA2ANF, was the lone candidate for the vice director's seat that W2ML vacated to run for the division's top spot and was also declared as elected.

And don’t look for as many League elections to take place in the future as in years past. These candidates were elected to serve three-year terms of office that begin at noon on January 1, 2004. The change from two year to three year terms was instituted by the ARRL Board a few years ago. (ARRL)

**

REQUIRED READING: SURGE PROTECTION - SEPARATING MYTH FROM FACT

If you think that $2.98 bargain basement power strip will protect your ham gear from power line spikes, you could be in for a rude and very expensive awakening. This is the gist of a feature article in the December issue of Popular Communications Magazine titled Surge Protection: Separating Myth From Fact.

The author is Popcom Editor Harold Ort, N2RLL. In it, Ort takes you on a mind boggling journey into the world of powerline surge protectors. He tells you why power surges take place and what really works to protect your station -- and -- what does not.

The article is must reading for any ham that operates his station from mains power. You can find Popular Communications on many newsstands worldwide or subscribe over the web at www dot popular dash communications dot com. (ARNewsline(tm))

**

INDUSTRY NEWS: ROHN ANNOUNCES ASSET PURCHASE AGREEMENT

Amateur Radio and telecommunications industry tower manufacturer ROHN Industries has announced that it's entered into an asset purchase agreement. This with SPX Corporation which is described as a global, multi-industry company.

According to the ARRL Letter, ROHN filed for Chapter 11 debtor-in-possession relief in the US Bankruptcy Court for the Southern District of Indiana on September 16. The deal, if approved by the court would include ROHN subsidiaries that are party to the bankruptcy proceeding. (WA6KLA, ARRL)

**

BREAK 2

This is ham radio news for today’s radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

WITH ARNEWSLINE: YOUR INPUT NEEDED

Amateur Radio Newsline will be holding its annual Board of Directors meeting in early December and those in charge want to find out what you would like from us in 2004 and beyond.  If you have any ideas on how to improve the newscast, the Young Ham of the Year Award, funding, or any aspect of our operation, we welcome your thoughts.  E-mail is best.  You reach us at newsline@arnewsline.org.  (ARNewsline(tm))

**

HAM HELP:  DX SOUND BITE NEEDED

Did you have a tape recorder running the weekend of the CQ World Wide SSB contest?  If you did then Glen Lowery, K2FF needs to hear what you have.

The reason?  Well, it seems that Daryl Goldman, KD5CQT,  and Randy Becnel, W5UE ,  spent a week in Suriname in October.  Goldman operated as PZ5CQ while Becnel was on as PZ5UE.  The duo also activated PZ5A in the contest.

Anyhow, when the team got back home they realized that they had recorded everyone on tape except PZ5UE.  And now there is a presentation planned for early December and audio of Becnel in QSO  is needed to complete the show.

If you happened to be listening in and have the one missing station recorded, please contact Glen Lowery by e-mail to k2ff@aol.ccm  Everyone involved will be very appreciative if one of you can help out.

More is on the web at www.mdxa.org/pz_2003.html  (OPDX)

**

EMERGING TECHNOLOGY: CELL PHONES WILL POSSESS LOCATION-BASED BEHAVIOR

According to a report on the National Institute of Standards and Technology website, your cell phone may one day be able to adjust its behavior or call handling based upon where it determines you are located.  Such phones could, for example, advise you of the closest bank, dial the nearest emergency specialist or automatically forward your calls while you're in a conference room.  The N-I-S-T website carries many other interesting stories too.  Its updated regularly and is in cyberspace at www.nist.gov  (CGC)

**

HAM RADIO IN SPACE:  ARISS GEAR PASSES PREFLIGHT TEST

Some exciting news on new ham radio hardware slated to be carried to the International Space Station.  We have more in this report:

--

ARISS International Chairman Frank Bauer, KA3HDO, reports that he and other members of the USA team just returned from Russia where we they were supporting a series of meetings and tests at the Energia facility.

According to Bauer, the primary reason for the US team visit was to complete the testing of the Phase 1 Ericsson 2 meter and 70 cm radios, along with the Phase 2 Kenwood D 700 radio system using a set of flight identical ARISS antenna systems.

The tests were performed in the KIS facility at Energia that houses all their flight equipment. Inside the KIS is a flight equivalent Service Module. The good news is that the group not only successfully completed the end-to-end testing of the Kenwood and Ericsson radio systems but the SSTV system as well.

The successful completion of these end-to-end tests was a requirement by the Russian team. This, to clear these radio systems for use in the on-orbit Service Module.

For the Amateur Radio Newsline, I'm Norm Seeley, KI7UP.

--

By the way, the International Space Station celebrated its fifth anniversary in Earth orbit on November 20th. (ARISS)

**

ON THE AIR: NEW SPANISH LANGUAGE IRLP REFLECTOR

A Spanish language reflector has come to the Internet Repeater Linking Project. This, with word that Reflector 9201 is in full operation and all users with Spanish skills are invited to join in the fun.

Jay Santiago, KP4EOP, is the operator of node 7040. He and the Chicago based Asociacion Iberoamericana de Radio Aficionados are the people behind the project. They say that 9201 is not closed to non-Spanish speakers. Rather it is a place in ham radio cyberspace where the Spanish language will be primary.

Up until now, IRLP- has been dominated English and French speaking nodes and reflectors. This left a large portion of the worlds Spanish only speakers out of communications over the very popular repeater linking system -- a problem that's now been corrected thanks to the Asociacion Iberoamericana de Radio Aficionados. (K9DC)

**

PROPAGATION TECHNOLOGY: NEW SOLAR FLARE THEORY

The recent series of solar storms to hit Earth may be caused by the sun's iron-rich interior. So says one solar researcher who theorizes that the sun's core is made of iron rather than hydrogen.

Dr. Oliver Manuel is a professor of nuclear chemistry. He believes that iron, not hydrogen, is the sun's most abundant element. And, in a paper accepted for publication in the Journal of Fusion Energy, Manuel asserts that the standard solar model which assumes that the sun's core is made of hydrogen has led to misunderstandings of how such solar flares occur.

As ever ham knows, these flares can play havoc with high frequency communications while turning some VHF frequencies into world-wide D-X bands. (ANS and Space Daily)

**

DX

And speaking about DX, word that OK1TN will operate portable KP2 from St. Thomas in the Virgin Islands through the 13th of December. If you make contact, QSL as directed on the air.

Also, K3JT is active as 5X1X from Uganda for the five or six weeks. Sorry. No other information on this operation is available at this time.

Lastly, the Council of Europe Radio Amateur Club, has launched a competition open to all radio amateurs. This, to commemorate the 18th anniversary of its establishment in June 1986. The challenge involves sending a list of all contacts made with their club station TP2CE using its various special prefixes before the end of June 2004. Complete rules can be found on the Internet at ewwa.free.fr

(This weeks DX news provided by OPDX, GB2RS and Modern DX’er)

**

THAT FINAL ITEM: T-HUNT TIME AGAIN

And finally this week, whether you're young or old, you could become a champion at hidden transmitter hunting. It's time to start training now, as you'll hear in this report from Amateur Radio Newsline's Joe Moell K-Zero-Oh-V

--

USA's best on-foot hidden transmitter hunters will be heading west next summer. The fourth annual USA ARDF Championships will begin June 16 near Santa Barbara, California. Get ready for practice sessions followed by separate days of intense competition on the two meter and 80 meter bands. Medals will be awarded in nine age and gender categories, following the rules of the International Amateur Radio Union.

The competitive courses are open to anyone of any age, experienced or not. Here's your chance to learn from experts like Jay Thompson W6JAY, Newsline's Young ham of the year. He was a medal winner at this year's Championships in Ohio.

These USA Championships will take place just in time for final selection of Team USA members who will travel to the Czech Republic for the ARDF World Championships in September.

Event sponsor for 2004 is the Santa Barbara Amateur Radio club.  General Chair is Marvin Johnston KE6HTS, a member of USA's first team to the World Championships back in 1998 and winner of  medals at the last two USA Championships.

The official Web site of the 2004 Championships is now being prepared, announcing the location of event headquarters, rules and technical details. Meanwhile, you can find out all about championship direction finding, and how your can have events in your home town, at the "Homing In" Web site, www.homingin.com

You'll learn the rules for this fast-growing sport, meet some of the current champions, get equipment suggestions and find out how to get on an e-mail list for the latest radio-orienteering news.  That's homingin, one word, homingin.com

>From southern California, where we have regular on-foot foxhunts and everyone is invited, this is Joe Moell K-Zero-Oscar-Victor for Amateur Radio Newsline.

--

Again, for more information take your web browser to www.homingin.com  (K0OV, ARNewsline(tm))

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm).  Our e-mail address is newsline @arnewsline.org.  More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org.  You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I’m Jim Damron, N8TMW and I’m Jeff Clark, K8JAC, saying we hope you had a great Thanksgiving, 73 and we thank you for listening."  Amateur Radio Newsline(tm) is Copyright 2003.  All rights reserved.

For sale:

Partial ownership in 1 KW full-time AM radio station in S. Oregon.

Joint venture. Active/inactive investors with at least $10,000 each are welcome. No individual may own over 49 percent. This rule applies to me too!

I have permission of my parole officer to run this posting and buy a (one-way)ticket to Brazil for a short trip!

Station is on the air for over 60 years. Full price of station is only $100,000 and it billed over $227,000 in 2002. This is a steal!

(The "Radio Crazy"  IT'S baaaaaaaak!!!)

Tel: (478)741-1710 in Macon, GA or email. Only those fully identifying themselves will be given callsign and city of license.

Please! No "AM bashers" or other negative nabobs!

The "Radio Crazy" is not THAT crazy. He is a semi-retired radio engineer and in 2001 was Chief Engineer for a 5 KW full-time AM in New York City.

Resume and references from my parole officer on request, HI!

73,

Meyer Gottesman, W6GIV
aka "The Radio Crazy"
aka Moron Gottesman

Joe Frank, the venerable radio producer/broadcaster/writer/experimenter who, depending on your perspective, has either perfected or pioneered the current narrative form of radio, has been honored with the 2003 Third Coast International Audio Festival's Lifetime Achievement Award.  I'm a great fan of Joe's work so I wanted to spread the word to everyone out there.  Visit the Third Coast Festival's website for more details, including airtimes for the Festival's broadcast:

http://www.thirdcoastfestival.org

For anyone unfamiliar with Joe's work, a good starting point is
JoeFrank.com, where you can hear some of his shows:

http://www.joefrank.com/shows.html

A list of every program Joe has produced is also available at his
website.  Get there now or be forever unfulfilled!

(The "Radio Crazy", it's baaaaaak!!!)

Partial ownership in S. Oregon AM radio station for
sale. 1 KW. On the air over 60 years. City of about
20,000.

Joint venture (You venture out, you go to the joint!)

HI!

Active or inactive investors with at least $10,000
each are welcome. No individual can own over 49
percent. This rule applies to me too! All investors
would be on the board with full voting rights if
desired.

References:

(a)Mr. Larson E. Repp, parole officer.

(b)Brazilian Bandit Airways. (Purchased one way ticket
to Rio).

Please, no "AM bashers" or other negative nabobs.

Station grossed over $227,000 in 2002. Not a joke,
this is a fact!!!!

Those properly identifying themselves will be given
callsign and city of license.

If things go sour, this will make one hell of a 160
meter rig! HI!

Tel: (478)741-1710 in Macon, GA.

73,

Meyer Gottesman, W6GIV
aka "The Radio Crazy"

Actually, WSAI repurchased TM's Southern & Pacific jingles. The package was originally a custom for WCFL/WWDJ/WQXI/WSAI. The original multitracks were pulled (I know... I did it) and new vocal arrangements were scored utilizing the new frequency of 1530. The cuts were sung at TM Century, Inc.

In addition to the TM cuts, they are using the Drake-Chanault stager ID, 20/20 news jingle and thematic breaks.

For sale:

(The "Radio Crazy": It's baaaaaaak!!!!)

Partial ownership in AM radio station in S. Oregon. 1 KW, full-time. On the air for over 60 years. City of over 20,000 with over 100,000 in county.

Active or inactive investors with at least $5,000 each (down from $10,000)are welcome. All investors would be on the board with full voting rights if desired. No individual may own over 49 percent. No bullies here! That rule applies to me too!

Total asking price is $100,000 WITHOUT real estate.

Please, no "AM bashers" or other negative nabobs.

FYI I am NOT a broker, shill, agent, owner or part owner. I am also NOT a crook.

Need to go out today and buy that one-way ticket on "Brazilian Bandit" airways! Also need to see parole officer for permission to rerun this posting! HI!

This is a joint venture. You heard it first here.

Standard required legal disclaimer: There is an element of risk and you could lose all or part of your investment. (Given the price of the station that is not very likely since the station grossed over $227,000 in 2002).

Tel: (478)741-1710 in Macon, GA.

A local High Desert radio station guide

http://www.highdesertinsider.com/html/radio.html

lists 105.3 FM Barstow as KIIS Top 40's

KIIS, of course, is 102.7 in Los Angeles.

105.3 Barstow (actually licensed to Yermo) is listed as KRSX, but it is licensed to Citicasters, so it's possible that it might be a repeater or translator. The listing is kinda weird (but then again, the highdesertinsider web page isn't an official list).

I haven't heard any programming on 105.3 that sounds like Kiss FM but I'll have to listen again and see what I can find. I may be a little too far from Barstow to get a good signal though.

What really struck me as strange is that there seem to be no fewer than five FCC licenses for stations on 105.3 in California with the calls KITS-FM.

Do an FM Search on the FCC's website, on 105.3 in California, and you will see KITS, KITS-FM1, KITS-FM2, KITS-FM3, and KITS-FM4 on 105.3.

KITS is San Francisco, FM1 is Walnut Creek, FM2 is Pleasanton, FM3 is San Francisco, and FM4 is Antioch. All owned by Infinity...

Can someone explain this? I've never seen it before.

They're reusing the Kiss logo and format in markets across the country. Last time I was in Chicago, I saw the exact same Kiss FM logo (only with 102.7 replaced by 103.5) on billboards across the city. My guess is the webmaster at this site mistook the similarity in formats/logos (and possibly simulcast morning show?) to mean the Barstow-area station is a translator of the real KIIS.

Of course, being a LONG way from California, it's possible the Barstow-area station actually *is* a high-powered translator of KIIS<grin>...

FM Boosters. Same purpose as a translator, but operates on the same frequency as the primary station. I suppose they're used when open frequencies for translators are scarce (certainly the case in the Bay Area!) and when terrain is rough enough that the boosters won't interfere with the main transmitter, at least not in places where anyone lives!

There are twelve of them in Pleasanton, relaying different SF-area stations. A bunch in Walnut Creek too. I count a total of 55 in various Bay Area sites.

They exist elsewhere too.  KPRI has three within the San Diego city
limits alone.  Current Engineering Database shows 179 boosters licensed.

>>

Nope.

"KIIS" implies AM.

KIIS (AM) is 850 in Thousand Oaks.

0.5 kW days, 0.25 kW nights, DA-2.

Citicasters owns it.

The original KIIS (AM) was 1150 in L.A.

It has been KXTA since 1997.

KIIS-FM is indeed L.A. ... also Citicasters.

They are all repeaters for KITS. They are very low power, usually directional and used to fill in dead spots where the original signal can't get through. There are several of those around the Bay Area for other stations too. They are very common in areas like around the bay where geography plays havoc with FM/VHF Line of sight.

On-channel boosters are not quite the same thing as translators. Boosters are used when terrain obstacles block parts of the predicted coverage contour of an FM station.  They are allowed only to fill such "holes," not to extend what would otherwise be the station's coverage area.  The SF bay area is full of them, as the topography prevents any FM station from reaching full coverage without boosters.

|
| KITS is San Francisco, FM1 is Walnut Creek, FM2 is Pleasanton, FM3 is
| San Francisco, and FM4 is Antioch. All owned by Infinity...
|
| Can someone explain this? I've never seen it before.

|
On-channel boosters. The Bay Area's terrain blocks signals from reaching areas that would otherwise have no problem getting coverage. The boosters "fill in the blanks", as it were. All but the San Francisco location are in East Bay communities on the opposite side of the Oakland and Berkeley hills from San Francisco. These boosters provide coverage to those communities and the I-680 corridor that connects most of them. There is little or no interference with the main station largely because the hills so effectively block the main signal. (I believe there is carrier synchronization involved as well, but I am not clear on the details.)

You'll see boosters for other stations as well, all in East Bay communities such as the ones above.

Not sure what the San Francisco KITS booster is doing -- KITS is transmitting from the Sutro tower which should give reasonably good coverage of most of the city.

Should have figured someone would call me on this. I figured 102.7 would imply KIIS-FM :P

> with 102.7 replaced by 103.5) on billboards across the city.

They flipped 103.5 to Kiss? Used to be active rock, and alt-rock before that. But the last time I was in Chicago was '94... there have probably been a lot of changes since then. Wonder how it does vs. B96. (I'm going to Chicago in a couple weeks so I guess I'll find out!)

> My guess
> is the  webmaster at this site mistook the similarity in formats/logos
> (and possibly simulcast morning show?) to mean the Barstow-area station
> is a translator of the real KIIS.

Simulcast? Hm. Wonder if it's Rick Dees or Sean Valentine. Dees is actually the morning guy at KIIS. Valentine is the afternoon drive guy but his show is voice-tracked and used as the morning show at a bunch of KISS stations in smaller markets.

> Of course, being a LONG way from California, it's possible the
> Barstow-area station actually *is* a high-powered translator of
> KIIS<grin>...

That's what I was thinking. Barstow is actually two hours north of LA (as the crow flies; it'll take longer to drive there because you have to deal with LA traffic and it isn't as straight shot).

> FM Boosters.  Same purpose as a translator, but operates on the same
> frequency as the primary station.

Thank you (and thanks to everyone else who replied.) I'm a little embarrassed about not knowing this, even though I've never worked in the industry.

I tuned in yesterday afternoon to WKOC, our local alternative rock station, to discover that they are playing a single song over and over, with an announcement that our old favorite country station is moving to this frequency.

What was most amusing was that the song they were playing, "Gone Country" is basically about various musicians who sold out and become country performers for the money.  Not exactly the sort of statement I would want to make if I were changing format.

The legal ID on the hour included a bit more explanation, about how WCMS, a local country station, has recently changed format and that therefore there was a big hole in the dial for people looking for country music, so that they were building up a brand new country station "from the bottom up."  Which sort of contradicts the notion of bringing back our old favorite one, but whatever.

I'm just amused by the whole thing.

http://www.tvradioworld.com/default.asp

Fun little site, you can make lists of radio and TV stations from all over the world. Web links and even internet radio are noted.

A few caveats though.

1. Right on the first page, it groups the world into three regions: Region 1 North America, Region 2, Middle East and Asia, Region 3, Europe and Africa. Uh, isn't this backward?

2. I don't know how up to date any of this material is...

3. It can sometimes take a while to "drill down" to the local list for any particular US state, Canadian province, or country....

4. Certain FM stations in Japan or Eastern Europe are mistakenly labeled as "Television" stations (the database programming wrongly assumes the US VHF band plan)

The "Radio Crazy": It's baaaaaaak!!!!

For sale: Partial ownership in 1 KW fulltime AM radio station in S. Oregon city of about 20,000. It is on the air for over 60 years and grossed over $227,000 in 2002.

Joint venture (You venture out, you go to the JOINT! HI!)

Active or inactive investors with $10,000 minimum each are welcome. "AM bashers" are NOT welcome. Nor are any other negative nabobs.

Total asking price for station is $100,000 WITHOUT real estate. I am NOT a broker, agent, shill, owner or part owner of same.

I didn't think station-owned translators were allowed to extend the
station's coverage area either?  (but independently-owned translators
are; IIRC the FCC does not allow independently-owned boosters)

Seems to me a large proportion of *commercial* translators are fillins,
not range extenders.  Of course the situation is very different for
non-commercial translators!

San Bruno, actually.  The SF booster is ON Sutro Tower, though, to fill in the hole left by Twin Peaks and such.

Thanks for the reponses.  There is an amp connected, but I don't think that the amp is the issue beccause this only happens during the winter.

The interference happens even if the heater is off.  It even happens if the car is not running!

Revisit the amp. If it's not the stereo head (you've changed it), it has to be something connected to the stereo head which would be the amp. More likely, it's probably a bad cable or bad connector on the cables going between the stereo head and the amp.

There has a been anew station in the Dallas-Fort Worth market testing KNOR, the station I think use to be in Norman, Oklahoma. They have been playing Jazz, some of it being more like Coltrane, Miles Davis than the smooth jazz played on

KOAI. I hope it doesn't turn out to be just another Country and'or rock station, or  worse a Christian station.

Councillor Majorie C Decker, Chair  Cable TV, Telecommunications and Public Utilities Committee
http://www.cambridgema.gov/cityClerk/CommitteeReport.cfm?instance_id=74

Committee Reports
Communications and Reports from City Officers

City Council Office
Committee Report

Committee Report #3
CABLE TV, TELECOMMUNICATIONS AND PUBLIC UTILITIES COMMITTEE MEMBERS

In City Council November 17, 2003
Councillor Majorie C Decker, Chair
Councillor Anthony D Galluccio
Councillor David P Maher

The Cable TV, Telecommunications and Public Utilities Committee held a public meeting on
Wednesday, October 22, 2003 at
twelve o'clock and forty-five minutes p. m. in the
Ackermann Room.

The purpose of the meeting was to continue discussing coordination of resources between the Municipal Cable, CCTV and the School Department cable.

Present at the meeting were
Councillor Marjorie C. Decker, Chair of the Committee,
Calvin Lindsay, Jr., Director, Municipal Cable,
Dhonyale Jones, Municipal Cable,
Joan Stern, Coordinator of Library Media Services, School Department,
Susan Fleishman, Executive Director, CCTV,
Ginny Berkowitz, CCTV and
Donna P. Lopez, Deputy City Clerk.

Councillor Decker opened the meeting and explained the purpose.

Councillor Decker stated that a survey is being formulated to see what the general public expects from cable, are needs being met and what else could be done.

She would like to strengthen cable through a collaborative effort and to review the allocation of resources.

The survey would be sent to department heads and opinion leaders.

Suggestions for the survey were submitted to the committee by
Municipal Cable (ATTACHMENT A) and
CCTV (ATTACHMENT B).

Councillor Decker asked if open-ended questions should the format of the survey.

Ms. Fleishman suggested starting with an educational part outlining what each entity does.

Ms. Stern informed the committee that a decision is being made by the Superintendent of Schools and this would make the expectation of the School Department collaborative different.

The creation of a studio that would be shared and funding for educational access has not yet been received are some of the issues.

Ms. Berkowitz stated that the Superintendent of Schools needed to decide if he wants the educational access as part of the School Department.

A leadership position and an education access department needed to also be created.

Educational access in the School Department has not grown and this is an opportunity, stated Ms. Berkowitz.

Councillor Decker stated that she would forward a letter of support by her to the Superintendent of Schools.

Councillor Decker stated that she wanted to get to the root of what the public thinks is the responsibility of each cable entity.

Ms. Jones responded that whom the survey should be sent to should be decided first.

Councillor Decker stated that at the last meeting is was decided that the survey should be sent to the city family and the city leaders.

Ms. Berkowitz asked if all arenas needed to be addressed by each entity.

Ms. Stern asked what event would require coverage by the three entities.

Ms. Jones responded the World's Fair and the Block Party.

Ms. Fleishman informed the committee that these events are not the responsibility of Channel 8.

Mr. Lindsay expressed his concern about false expectations due to the survey.

The issue comes down to how are decisions made and what events get coverage.

Councillor Decker stated that she would like to hear from the public on what the public would like to view on cable, and find out what is available.

Municipal Cable, CCTV and School Department cable needed to be explained in detail.

She would like to bring in people to explain the cable possibilities.

Cambridge, she said, is supposed to be a technologically savvy city.

She is attempting to get support and interest in the issues of what is expected and what are the possibilities.

If the educational portion generates excitement then maybe a forum could be held.

She stated that she wanted to ensure that the resources are being used efficiently.

Ms. Berkowitz stated that the survey is a way to educate the public about what is available, what are the local channels and what is designated for these channels.

She suggested that each entity list what they do.

Mr. Lindsay agreed with this suggestion.

Ms. Fleishman stated that CCTV has a brochure entitled GUIDE TO LOCAL PROGRAMMING ON CABLE TELEVISION IN CAMBRIDGE (ATTACHMENT C).

Ms. Berkowitz suggested that the survey should be comprised of the Guide and a page of questions about what people wanted to view on cable (ATTACHMENT D).

She also favored a master calendar.

Councillor Decker stated that the survey should contain a comment that resources are limited.

A question should also be phrased in the survey to seek departmental interest and participation and ask for a department contact.

Ms. Fleishman stated that the survey should contain questions on issue-oriented formats.

Councillor Decker responded that she would like to be specific on the issue-oriented matters.

What issue-oriented matters, such as environment, political or literacy, would the public like more to view?

Councillor Decker questioned Mr. Lindsay that if a program were done on environment would there be studio space available.

Mr. Lindsay stated that it depended upon who would cover the program and if it were a studio-based program.

Ms. Berkowitz stated that regular weekly programming requires organization for space, studio and content organization.

Ms. Stern stated that she wanted students to work with a professor in an environment such as this.

There are personnel in cable who wanted to work with the School Department.

Ms. Jones asked if all the schools have live cable.

Only one school does not have live cable, stated Ms. Stern.

The high school needed more live cable drops.

Councillor Decker asked who covers the Kennedy School of Government.

Ms. Jones stated that the Kennedy School does their own programming.

A discussion ensued about sports coverage.

Councillor Decker stated that it is a challenge for CCTV and Municipal Cable to cover sports programming.

Possibly students could cover the sporting events.

Ms. Stern stated that students are covering sporting events now.

Ms.  Berkowitz stated that there are school-based and community-based sports.

Cambridge has a lot of sports and sports are not easily covered.

There at 95 soccer games in Cambridge each week.

She suggested a specific time slot around sports or a game in each sport for each gender should be cablecast.

Councillor Decker asked who covers sports.

Mr. Lindsay responded no one.

Municipal Cable does cover the game at Thanksgiving and the Mayor's Cup.

Ms. Berkowitz stated that the School Department should cover school sports;

Municipal Cable should cover city sports.

Sports coverage is not the mandate of CCTV,
however one hour of sports is covered.

Councillor Decker suggested scheduling a future meeting with the Athletic Department to have a discussion about the challenges encountered covering sporting events.

The point is to figure out how to get sports on cable
stated Ms. Fleishman.

Ms. Berkowitz told of a program entitled "Bring Your Own Camera," but there was no interest from the public in the program.

Councillor Decker stated that at the sports meeting the following organizations should be invited:

- Cambridge Youth Soccer;
- Cambridge Little League;
- School Department Athletic Department;
- Pop Warner football and cheerleaders;
- Cambridge Youth Hockey; and
- Representatives of basketball.

This sports meeting would also serve to educate the sporting leagues about the challenges faced by the cable entities to cover the events.

In conclusion Councillor Decker requested Mr. Lindsay and Ms. Stern to review the CCTV Guide, make amendments and provide "sign offs" on the Guide.

Ms. Fleishman suggested to Ms. Stern that information be placed on the School Department bulletin board.

The next meeting was scheduled for
Thursday, November 6, 2003 at
twelve o'clock and thirty minutes p. m.

Councillor Decker thanked those present for their attendance.

The meeting adjourned at one o'clock and fifty minutes p. m.

For the Committee,
Councillor Marjorie C. Decker, Chair

ATTACHMENT D

- 1.What are the opportunities for collaboration between Municipal Cable

(Channel 8), CCTV and the School Department?

- 2.With the limited resources what events should be designated as "must coverage"?

- 3.Should school based or community based sporting events be covered and what entity should cover these sporting events?

- 4.What issue oriented formats, such as environment, politics and literacy should be covered.

REPORT ACCEPTED. PLACED ON FILE. on November 13, 2003
http://www.cambridgema.gov/cityClerk/CommitteeReport.cfm?instance_id=74

Most communities -- mine is no exception -- has at least three "public service" channels.

One is the Community Access station. Anyone who wants a show can be a TV star. He/she must take a course and learn how to use the equipment properly, and the show cannot be commercial in nature or have an 'aroma' leading back to a commercial venture. In my town a lot of that broadcast time goes unused.

There is also a government access channel. Events such as city council, school committee, cable TV committee meetings,  etc. are carried there, as are a few governmental ceremonial functions.

There is also a school department channel.   The high school has a studio. There are,  two problems with cable TV and high school sports --

1)  There has to be a production team willing to do the work -- usually within the school itself and students will not commit to it

2)  Here in Massachusetts,   those that control high school athletics are a little antsy about live television of high school events.   They harken back to the 1950s,  when the NFL wouldn't put sold out home games on TV,  fearful that attendance would eventually erode.   Times have changed.  Those that run high school athletics have not.

WCBN WILL DESTROY YOUR FEEBLE FORMATS

WCBN - 30 Years of Freeing Your Mind - Listen to us online!

WCBN is the University of Michigan student-run community freeform radio station in Ann Arbor, Michigan. We broadcast at 200 watts to the University and its surrounding communities from the basement of the Student Activities Building in downtown treetown.  We have been broadcasting a genre-less overview of music, news, and public affairs for 30 years.

WCBN's musical format is freeform, with some specialty shows. Freeform involves all different kinds of music, including jazz, reggae, blues, hip-hop, country, rock, and just about everything else under the sun. Instead of telling our DJs what to play, we allow them to select their own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an intelligent fashion, and show links between musical genres.

Click here to listen to our live WCBN-FM Ann Arbor broadcast!

I am the director of an NGO building out independent radio networks in Afghanistan. The combination of geography and security problems, as you can imagine, are ferocious. As a result, we need to examine a lot of different technical options and I would like to ask the group some questions:

1) How can AM be made more one directional than another? We might want to put strong AM signals in towns near Afghanistan's borders but cannot antagonise neighbours by having large signal spillage into their territory. What are cost implications of channelling an AM signal in this way?

2) How far can an STL wireless transmission reliably broadcast? I understand most STLs are wire, but there are also wireless STLs using the 940-950 Khz band. Could we use this wireless STL to spread signal to repeater networks across mountains where FM would be difficult?

3) How far could a big FM signal reach, assuming little constraint on power?

4) In FM repeater networks, how many links down a chain can a signal reliably be put through? Are repeaters normally only a one stage phenomenon, used like spokes in a wheel, or can you set up a chain up and down a long valley for example?

5) Does anyone know about renting space on satellites? How much it would cost to have a 24 hour audio channel beaming down to receivers? How much a single uplink mechanism might cost, and receiver dishes?

Many Thanks

John

> over 60 years.
>

Meyer, I am not interested in stake but have just posted on the group technical questions about both AM and FM. I wonder if you could tell me how far your signal reaches with 1 KW and over what kind of terrain? My name is John West, I am Director of a media non-profit based in Afghanistan called Internews, and you can see my post on the main board for the group.

Thanks

John

I some how had a 3000W FM Radio station handed to me, and i have a few quick questions.

The station currently has an ORBAN Model 8100A OPTIMOD-FM. I noticed that my station sounds 'very flat' compaired to other stations playing the same music. My question is this:

I would like to make the music 'thump'. Can i do some audio processing before the optimod? (ie add a bit more .. *unf*), or would the optimod just strip that anyways? All i would like is for the drums and bass to hit just a little harder, i've dorked with the optimod and had the engineer in there, and i think we have it sounding as good as its going to get by itself, but want more, but to poor to buy even a newer one for now.

Sorry if this question seems silly, or retarded, i know nothing about

any of this, like i said i fell backwords onto the station and i'm
just trying my best to keep it operational.

I appreicate your time!

For sale:

The "Radio Crazy", it's back!

Partial ownership of fulltime 1 KW AM in Oregon. City
of about 20,000. On the air over 60 years. Billed over
$227,000 in 2002.

They are asking only $100,000 WITHOUT real estate.

Joint venture. (If you venture, you land in the joint!
Hi!)

Active or inactive investors with at least $10,000

each are welcome. Nobody can own over 49 percent and that includes me!

All investors would be on the board with full voting rights if desired.

I am a semi-retired radio engineer. The "Radio Crazy" ain't THAT crazy! I was Chief Engineer for a 5 KW fulltime AM in New York City in 2001. Ham since 1950.

Tel: (478)741-1710 in Macon, GA.

Only those willing to fully identify themselves will be told the callsign and city of license.

Please, no "AM bashers" or other negative nabobs. If you are the type that has seen too many movies and assumes I have a one way ticket to Brazil, please don't waste my time and insult me! I worked for the Feds in 1972 and held a secret level security clearance.

All monies would be held in the escrow account of a Washington DC communications attorney. I don't touch a dime. I could not if I WANTED to!

Subject to FCC approval of the license transfer, of course.

Standard stupid legally required disclaimer: The is an element of risk and you could lose all or part of your investment.

73,

Meyer Gottesman, W6GIV
aka "The Radio Crazy"
aka Moron Gottesman
aka Moronic Gottesman (grin!)

Best of luck with the station!  Where is the transmitter located in relation to the studios?  How are they connected?  Where in this chain is the Optimod located?  The Optimod is capable of  limiting and maybe some compression, but it will not compare to processors that have come along since the 8100 rolled out of the factory.

>going to get by itself, but want more, but to poor to buy even a newer
>one for now.

There are a lot of things that have been done with Optimod 8100's; the best I've heard involved changing some of the chips in the Optimod and installing an Aphex Complellor and a set of Gentner Audio Prisms in front of it. Some folks have used replacement cards like Glen Clark's Cobalt Blue card in the Optimod.

However, today it's much easier just to replace the 8100 with one of the latest digital boxes such as the Optimod 8400 or Omnia 6.

We just replaced an Optimod at one of our stations with an Inovonics Omega FM processor; it's an excellent box that's almost infinitely configurable. And it's only $4500.

johnfxwest@yahoo.co.uk (John) writes:

>1) How can AM be made more one directional than another?

The usual method is to put up two or more towers approximately 1/4 wavelength tall and vary the phase and amplitude of the signal fed to each to produce the desired directional pattern.

>2) How far can an STL wireless transmission reliably broadcast?

Up to about 40 miles depending on the height of the antennas, their gain, and the power used. The terrain must be favorable.

>3) How far could a big FM signal reach, assuming little constraint on
>power?

The reach will depend on the antenna height and the surrounding terrain. A California FM where I used to work ran 18,500 watts from the top of a 3,000-foot mountain and had regular listeners 100 miles away.

>4) In FM repeater networks, how many links down a chain can a signal
>reliably be put through? Are repeaters normally only a one stage
>phenomenon, used like spokes in a wheel, or can you set up a chain up
>and down a long valley for example?

I don't do repeaters, but there used to be a network of public radio stations in New England that relayed "Morning Pro Musica" from one station to another. The farthest station was 3 or 4 stations down the chain and sounded pretty grungy, according to what I was told. But this was 20 years agio, and technology has come a ways since.

>5) Does anyone know about renting space on satellites?

Yes; we're doing that right now.

>How much it
>would cost to have a 24 hour audio channel beaming down to receivers?

We're paying $2,200 a month to lease channel space on Galaxy 4R from National Public Radio. We use the channel 24 hours a day to feed a dozen or so affiliates from Maine to California.

>How much a single uplink mechanism might cost, and receiver dishes?

The uplink cost us about $50,000 to set up. The receive dish I set up at one affiliate cost about $10,000, including the dish, the receiver, and installation.

But of course we're not in Afghanistan.

I hosted "Morning Pro Musica" with Bill Cavness in the days of of air networking. Until microwave came in the signal from WGBH, Boston to WFCR, Amherst, MA was pretty bad. It was known as the Eastern Educational Radio Network.

Just imagine the quality from stations taking WFCR off the air.

Rich

The optimod is in the chain as follows:

!MUSIC! --> BOARD --> OPTIMOD --> STL > Beamed to the transmitter.
Where the other STL is located.

I was advised perhaps I could do some audio processing on the
otherside of the optimod so it would go MUSIC - BOARD -OPTIMOD -
PROCESSING - STL. But to me, this sounds like trouble. And i think I
would have to convert composite audio into analog audio, and then back
again -- pain in ass, I'm looking for some good deals now on an aphex
compellor, donations always are welcome! HAH!

Thanks alot,

Keith

You've all been very helpful!

For sale:

The "Radio Crazy", IT'S back!!!!

Partial ownership in 1 KW fulltime AM radio station in small Oregon city of about 20,000 population. About 100,000 in that county. Station is on the air over 60 years. Oldest station in that county.

Total asking price is only $100,000 WITHOUT real estate. Station billed over $227,000 in 2002.

This is a JOINT VENTURE. There is an element of risk and you could lose all or part of your investment. Given the insanely low selling price, this is not very likely!

Active or inactive investors with at least $10,000 (Ten thousand dollars) each are welcome. The first two investors will get 1.25 ratios. In other words an extra 25 percent over what you SHOULD have. Instead of 10 percent you'd have 12.5 percent for same investment and so on. This is to reward the risk-takers. We need to get going on this!

I am a semi-retired radio engineer. My last position was Chief Engineer (2001)for a 5 KW fulltime directional AM in New York City. The "Radio Crazy" ain't THAT crazy! Hi!

I am no broker, agent, shill, owner or part owner. I am also no crook! That should go without saying.

Please, no "AM bashers" or other negative nabobs. Yes, I don't know what the hell a "nabob" is either!
(grin!)

Email or call please (478)741-1710 in Macon, GA.

Do not respond if you are not a US citizen or have any felony convictions as an adult. The FCC will screen you!

73,

Meyer Gottesman, W6GIV
aka "The Radio Crazy"

Amateur Radio Newsline=E2=84=A2 Report 1370 - November 14,  2003

Amateur Radio Newsline report number 1370 with a release date of Friday,=20
November 14, 2003 to follow in 5-4-3-2-1.  =20
=20
The following is a Q-S-T.=20

Internationally sponsored ham radio training begins in Albania, UOSat-14=20
goes QRT for good and ARISS honors the late Roy Neal, K6DUE, with an on=20
the air -- space to ground event.  The details on Amateur Radio Newsline=20
report number 1370 coming your way right now.

(Billboard Cart Here)=20
=20
**

BREAKING NEWS: AUSTRALIA TO BE CODE FREE

The Australian Communications Authority has announced to QNEWS that as=20
of January First 2004 CW will no longer be a requirement for Amateurs to=20
operate on the HF bands.  From Monday November 17th, the ACA website=20
will have the press release under the signature of Dr. Bob Horton. Full=20
details on next weeks Amateur Radio Newsline report.  (Q-News)

**

RADIO EDUCATION:   AMATEUR RADIO PROGRAM OPENS IN ALBANIA

We told you a few weeks ago that it was going to happen and now it has. =20
Ham radio training is now available in Albania.  Jeramy Boot, G4NJH, in=20
the U.K. takes an in-depth look at the new internationally sponsored=20
training program:

--

A unique amateur radio program started in Tirana, Albania the 9th of=20
November. Thirty-four third and fourth-year university students began a=20
five-week amateur radio course using RSGB study material as the=20
reference books.

The course will culminate in CEPT license examinations. It is being run=20
in cooperation with Mr. Spartak Poci, the Albanian Minister of=20
Telecommunications, and the Polytechnic University of Tirana.=20

A unique part of the program is the way in which amateur radio is being=20
integrated into the regular university courses.  The course will not=20
only teach amateur radio up to the RAE Full-license standard, but also=20
the role of amateur radio in society, QSL'ing practices and successful=20
Dxpeditioning.

During the five-week period, ZA1A will be active on many bands and modes=20
while demonstrating amateur radio to local telecom and education =20
administrators, as well as to the students. Multiple locations will be=20
used and several stations may be active at the same time. After the=20
course, all the donated equipment will serve the amateur community.

Jeramy Boot, G4NJH, in Nottingham, the U.K.
--

This unique, one-of-a-kind ham radio training program is supported by=20
Region 1 of the International Amateur Radio Union.  Additional=20
assistance comes from several national ham radio societies, the Northern=20
California D-X Foundation, Vertex Standard,  Fluidmotion Corporation,=20
Malev Airlines and the Rogner Europark Hotel in Tirana Albania.  (RSGB,=20
OH2BH)

**

## RESTRUCTURING:  SWEDEN MAY GO CODEFREE

Sweden could be next nation to drop the Morse requirement for ham radio=20
licensing and end C-W testing. =20

The November issue of the Swedish national amateur radio society's=20
magazine, QTC, says -- and we quote:  "Soon - very soon - the=20
requirement for knowledge of C-W for High Frequency band access will be=20
dropped for the country's would-be amateurs and current Class 2=20
amateurs".=20

SM0SMK is the President of the Swedish national society.  He says that=20
they hope the Morse code test requirement will be removed at the end of=20
the year.  (GB2RS)

**

## HAM RADIO IN SPACE:  OSCAR 14 GOES SILENT

One of ham radios most popular emergency communications Easy Sats has=20
gone Q-R-T.  This with word from the Surrey Space Center that U-Oh-Sat=20
Oscar 14 has finally reached the end of its mission after an amazing 14=20
years in day to day service. =20

Launched in January of 1990, U-Oh-14 was the first 9.6 kilobit per=20
second amateur digital communications satellite.  It literally pioneered=20
the packet satellite or PacSat concept. =20

After about 14 months on-orbit, U-Oh-14 was switched to commercial=20
frequencies for humanitarian service by an organization called Satelife. =
=20
It was used by them until 1997 when it was returned to Amateur Radio=20
service and configured as an F-M repeater in space. =20

A failure of one of the cells of its on-board battery supply is keeping=20

the entire pack from recharging from the satellites solar array.  This=20
causes the transmitter to shut down shortly after it is commanded on. =20
This situation lead to the decision by controllers to terminate the=20
micro satellites mission after more than 72,000 orbits of the planet. =20
(RSGB)

**

RADIO HONORS:  ARISS TO CELEBRATE THE LEGACY OF ROY NEAL, K6DUE

The Amateur Radio on the International Space Station team will be=20
honoring the memory and the legacy of the late Roy Neal, K6DUE.  This,=20
with an operating event involving the crew on the orbiting outpost and=20
hams on the ground.  Amateur Radio Newsline's Norm Seeley is here with=20
the details:

-- =20

In a joint release, Frank Bauer, KA3HDO and Sergej Samburov, RV3DR of=20
the ARISS International team say that the event is being held to=20
commemorate Roy Neal's vision and dedication.  This, in the development=20
of manned Amateur Radio space communications. =20

And as a celebration of Roy's contributions ARISS has requested that the=20
current I-S-S crew take to the airwaves the weekend of November 29th and=20
30th to  communicate with as many ground based amateur radio operators=20
as they can.  After the initial two days, the operation will continue=20
through the month of December using both voice and packet. =20

Ham radio from the International Space Station signals will be on the=20
usual frequencies.  These are 145.80 MHz as the worldwide voice and=20
packet downlink.  That's where you listen. =20

The worldwide packet radio uplink channel is 145.99 MHz.  144.49 MHz is=20
the voice uplink for the America's and the Pacific while 145.20 MHz is=20
where to call if you are in Europe, Central Asia and Africa.

Roy Neal, K6DUE, died last August 15th due to complications following=20
heart valve replacement surgery.  He is very much missed by everyone in=20
the world wide ham radio community especially by us here it the Amateur=20
Radio Newsline where he was a friend and colleague.

The full text of the ARISS International release about this special=20
operation commemorating Roy Neal's contributions to manned ham radio in=20
space is now at our website.  That URL is www.arnewsline.org.  Scroll=20
down to the new "This Just In" area and you will find it there.

For the Amateur Radio Newsline, I'm Norm Seeley, KI7UP.

--

According to Bauer and Samburov hams making contact with the Roy Neal=20
Commemorative Operation will be eligible for a special certificate. =20

More ham radio in space news later on in this weeks report. (ARISS)

**

Break 1

>From the United States of America, We are the Amateur Radio Newsline,=20
heard on bulletin stations around the world including the W9EAR repeater=20
of the EARS Repeater Network serving Indiana, Kentucky and Illinois.

(5 sec pause here)

**

AN ARNEWSLINE(tm) EDITORIAL: AN ANONYMOUS NOTES OR E-MAIL PLEASE =20

I'm Bill Pasternak, WA6ITF, with a short editorial comment. Actually,=20
its more of a reminder that the Amateur Radio Newsline does not accept=20
anonymous letters and e-mail as valid information or story leads. =20

Every so often, a letter or e-mail will arrive making all sorts of=20
claims. It might deal will allegations that a ham radio test session is=20
corrupt, or identifying someone as the purported jammer of a net or that=20
a ham is doing business over a local repeater. This past week we=20
received two such notes. One claimed that a repeater was discriminating=20
against a group of individuals. The other claimed corruption in the=20
management of a ham radio convention. Both had something in common --=20
they were unsigned. And here's our policy in dealing with unsigned=20
correspondence. Ready?

(Sound of actual letters being torn up and toss in the trash basket.)

That's right, you just heard me rip it up and toss it in the garbage=20
can. And the reason is simple. If the person sending the letter or the=20
e-mail does not have the courage to sign it, then the chances are that=20
he or she is attempting to use us and you in a personal vendetta. And=20
friends, we are not going to let ourselves or you to be used in=20
someone's private war. That's been our policy since our days as the=20
Westlink Radio Network and it is still our policy today.

The bottom line. If you are going to send us information you must=20
provide identification and be ready to take responsibility for your=20
words and actions. I you are not willing to do so, please save us the=20
time and effort of doing this -- and tossing it in the trash. =20

This has been an infrequent Amateur Radio Newsline editorial. In Los=20
Angeles, I'm Bill Pasternak, WA6ITF. (ARNewsline(tm)) =20

**

ENFORCEMENT: ALLEGED TOWER UNBOLTER CAUGHT

A follow-up to a story we aired two weeks ago about a man trying to=20 unbolt power transmission towers in three western states.  He has now=20 been captured.

According to news reports, the suspect is identified as Michael Poulin. =20 He claims that his actions illustrate how vulnerable the power grid=20 might be to acts of terrorism.  At airtime, charges against him are=20 pending.  (Published news reports)

**

## ENFORCEMENT:  IRLP HARASSMENT

A pair of mid-West hams are being asked to explain their actions their=20 on the air activities.  The FCC's Daryl Duckworth, NN0W, tells us who=20 and why:

--

Duckworth: "Two Oklahoma amateurs; Johnny Adams, KD5QJG, of Dell City=20 and Jack Stokes, KE5KR, of Oklahoma City have been queried regarding=20 complaints of deliberate interference and harassment of repeater users=20 on W5QO, 144.650 and 145.250 MHz."=20

--

The FCC says that at the time the incident occurred, the W5QO repeater=20 was functioning as an IRLP node.  Adams and Stokes were given 20 days=20 from the day that they received the FCC's letter to answer the charges. =20 They were also warned that failure to respond could result in the=20 revocation of Amateur station license and suspension of operator=20 privileges.  (FCC, RAIN)

**

## ENFORCEMENT:  HEY YOU LEFT THE RADIO ON

The FCC also wants to know why a ham may have walked away from his car=20 with his rig running as a cross band repeater.  Again, the FCC's Daryl=20 Duckworth, NN0V:

--

Duckworth: "A complaint of two hours of interference on September 16th,=20 coming from an amateur transceiver unit, in a car, unidentified,=20 unattended, and operating in crossband mode has prompted the Enforcement=20 Bureau to inquire of the vehicle's owner, KG6QKR, Angel Carballo, of=20 Freemont California.  The vehicles was located at Hamilton and Bascon=20 Avenue's in San Jose (California) at the time of the interference to=20 145.23 and 146.94 MHz."

--

Like Adams and Stokes, Carballo was also given 20 days from the date he=20 received the FCC's letter to file a response. (FCC, RAIN) =20

**

### RADIO LAW: A CLARIFICATION ON EQUIPMENT SEIZURES

Phil Kane, K2ASP, says in the CGC Communicator that the FCC does not=20 confiscate equipment. =20

Kane, now an attorney in Oregon is the retired District Director of the=20 FCC in San Francisco California. He says that he served many times as=20 an on-scene supervisor during events such as the recent raid on an=20 unlicensed broadcaster where equipment was taken. According to Kane,=20 seizures are made by the U.S. Marshal Service executing an order of the=20 Federal District Court. Any items taken are held pending court action=20 of forfeiture of the equipment to the Government. =20

According to Kane, the FCC agents on scene are there only as technical=20 experts. They identify to the Marshals what equipment falls under the=20 purview of the seizure warrant. (CGC)

**

### RADIO RULES: THE FEDS ON FRS

Federal government entities have been authorized to purchase and operate=20 radios certified by the FCC in the Family Radio Service. This,=20 according to the May 2003 Manual of Regulations and Procedures for=20 Federal Radio Frequency Management.

The manual says that pursuant to Part 95 Subpart B of the FCC Rules and=20 Regulations, government users will be accorded the same privileges as=20 non-federal users. Also, since FRS users must share each channel and no=20 user is assured protection from interference caused by another=20 authorized user, federal entities may not purchase and operate F-R-S=20 radios for planned communications operations that safeguard human life=20 or property.

The Manual of Regulations and Procedures for Federal Radio Frequency=20 Management is a great publication that has a ton of useful information. =20 The only drawback is that it costs $342.00 new. However it is available=20 for viewing and download, chapter by chapter, at=20 www.ntia.doc.gov/osmhome/redbook/redbook.html (CGC)

**

### HAM EDUCATION: NEW ON-LINE HELP FOR INSTRUCTORS

The American Radio Relay League's Field and Educational Services branch=20 has announced a new resource for active Volunteer Instructors. Titled=20 the Online Instructor Primer, it's a new compilation by Linda Mullally,=20 KB1HSV, that's jam-packed with helpful tips, links, and tutorials sure=20 to help instructors eager to try new ideas and approaches. More=20

information about it is at the ARRL website.  Just take the link to=20
www.arrl.org/FandES/ead/instructor/oip  (ARRL)

**

NAMES IN THE NEWS:  PATRIOT NAME CHANGE

Turning to this weeks names in the news.  Word that the Patriot DX=20
Association has changed its name to the New England DXCC with a new=20
mission.  That of fostering participation in DX'ing and the DXCC=20
program. =20

The group has also announced the creation of a new operating event=20
called the N-E-D-X-C-C Challenge.  According to an October 27th press=20
release the purpose of the Challenge is to stimulate on-the-air=20
operating activity among club members to make contact with many DXCC=20
countries as possible during the prescribed activity periods.  More=20
information is on the web at www.nedxcc.org (Via e-mail)

**

BREAK 2

This is ham radio news for today's radio amateur.  From the United=20
States of America, We are the Amateur Radio Newsline with links to the=20
world from our only official website at www.arnewsline.org and being=20
relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

EMERGING TECHNOLOGY: SOUND OF A BLACK HOLE

>From the science page this question.  Did you know that the voice of a=20
black hole is a deep, deep bass?  In fact, its 57 octaves below middle=20
C.  It is and Jim Meachen, ZL2BHF, has more:

--

The Chandra X-ray Observatory has picked up sound waves for the first=20
time from a cluster of galaxies 250 million light years away. =20
Astronomers at the Institute of Astronomy in Cambridge, England,=20
discovered the sound waves while analyzing the Chandra images of the=20
Perseus cluster.  This is an immense grouping of galaxies held in=20
formation by the powerful tug of a super massive black hole.

Andy Fabian is a professor at the Institute of Astronomy.  He says that=20
a close study of the fine detail collected by Chandra shows ripples in=20
the X-ray pattern that are caused by sound waves excited by the energy=20
from the black hole. =20

Fabiam says that the sound produced by the black hole is a B flat, the=20
same pitch as a key near middle C on the piano.  But the song of the=20
Presses Black Hole is 57 octaves below that middle C.  This is a tone or=20
frequency more than a million, billion times deeper than the limits of=20
the human ear,.  Fabian says that makes it the lowest note known in the=20
universe.

For the Amateur Radio Newsline I'm Jim Meachen, ZL2BHF, in New Zealand.

--

Scientists expect more insight on this as the experiments progress. =20
(Science Today)

**

## EMERGING TECHNOLOGY:  NEW FRACTILE ANTENNA DESIGN

Engineers at Pennsylvania State have developed innovative design methods=20
for a new class of antennas.  One composed of an array of fractal-shaped=20
tiles that offer anywhere from a 4 to 1 to 8 to 1 improvement in=20
bandwidth compared to their conventional counterparts. =20

According to Space Daily, the new broadband antennas are composed of=20
irregular but self-similar, repeated fractal-shaped unit tiles called=20
"fractiles."  These "fractiles" cover an entire plane without any gaps=20
or overlaps. =20

While fractal concepts have been used previously in antenna design, the=20
Penn State research team are the first to introduce a design approach=20
for broadband phased array antenna systems.  One that combines aspects=20
of tiling theory with fractal geometry.  (ANS, Space Daily)

**

## HAM RADIO IN SPACE:  AMSAT UK DONATES TO LAUNCH FUNDS

AMSAT-UK is funding the development of two new amateur radio satellites=20
by donating =C5=9310,000 to each of two projects in the USA and Germany. =
 In=20
accordance with their constitution, at their meeting on Saturday October=20
25th, AMSAT UK decided to make an immediate donation of =C5=9310,000 to t=
he=20
AMSAT North America's Project Echo Launch Campaign Fund. =20

Also at the meeting AMSAT U-K decided to earmark another =C5=9310,000 for=
=20
transfer to AMSAT Germany to support the Phase 3 Express project.  This,=20
when a suitable component for funding can be identified.

Project Echo satellite is due to be launched next March 31st.  The Phase=20
3 E Express ham satellite is likely to get a ride to orbit in the 2005=20
to 2006 time frame.   (ANS)

**

## BEACON NEWS:  UK PROP BEACONS BACK ON

If you are a microwave D-X'er, listen up.  This one is for you.  It=20
comes from the United Kingdom and says that two of that nations highest=20
frequency beacons are back in full time operation.

Both are part of the South Coast microwave beacon complex.  GB3SCX=20
operates on 10 GHz and GB3SCK on 24 Ghz.  The two units are again=20
operational following a major rebuild.  Both have had their output power=20
increased, raising them at least 10 dB above their previous levels.  And=20
there's more. =20

GB3SCK has been retuned to transmit on 24,048.905 MHz in order to comply=20
with the new 24 GHz bandplan, which will come into force at the=20
beginning of 2004.  Also, the GB3SCC which is on 5760.905 MHz has had=20
its keying duty cycle adjusted.  It now transmits callsign and location=20
details, followed by plain carrier for a total of 45 seconds.  It then=20
stops transmitting for 15 seconds to permit cooling before resuming its=20
operation.  Reception reports on any of these beacons go to John Fell,=20
G0API, at his Callbook address.  (GB2RS)

**

## DX

In D-X, MW0USK reports over QRZ.com that M1DAZ, who is on active duty=20
with the British Forces Broadcast Services in Iraq,  has obtained=20
official authority to operate with the callsign YI9DAZ.  Darran will be=20
active around the bands for the next couple of weeks using a Yaesu FT-100 and Atas aerial from the Southern part of the country.  Most of his=20
operation will be on P-S-K 31 so that he does not disturb his room mate=20
who is the presenter of the early morning radio show.  QSL direct to=20
M1DAZ at his home address.  (qrz.com)

F6BUM will be active on CW, SSB and RTTY from various regions of Peru. =20
This, between the 5th of November and the 5th of December.  He will be=20
using the callsign OA, followed by a district number, stroke F6BUM. =20
(GB2RS)

Also, three operators from Japan will be active from Kathmandu, Nepal,=20
between the 16th and 22nd of November. The callsigns will be 9N7AU,=20
9N7LN and 9N7SZ. They will operate on 40 to 6 metres using two HF rigs=20
and a 6-metre rig.  (GB2RS)

And, a VHF DXpedition to La Palma in Square IL18, should be active=20
through November 19th.  This, with DJ6JJ and DL1EJA operating during the=20
ARRL EME Contest and scatter during the Leonids meteor shower. Their =20
station is reportedly using use high power to four 12-element Yagis with=20
full elevation control.  For all of these operations please QSL as=20
directed on the air.  (GB2RS)

**

THAT FINAL ITEM:  THE TECH SIDE OF THE NYC MARATHON

And finally this week a look at two other ham radio aspect of the New=20 York City Marathon.  The way hams organize and the technology that they=20 use.  Here's Henry Feinberg, K2SSQ:

--
Last week Communications Coordinator Steve Mendelsohn, W2ML, told us=20 that it takes 411 radio amateurs to keep the New York City Marathon=20 moving along.  This week W2ML says that it also takes a lot of well=20 organized ham radio networks to keep the messages flowing:

--

Audio only.  Hear the newscast in mp3 at www.arnewsline.org

--

According to Mendelsohn, ham radio communicators are aided by a lot of=20 modern technology.  Its science that literally gives them a leg up on=20 the contestants:

--  =20

Audio only.  Hear the newscast in mp3 at www.arnewsline.org

--

And this year ham radio expanded the use of its own kind of digital=20 positioning technology:

--

Audio only.  Hear the newscast in mp3 at www.arnewsline.org

--

According to Mendelsohn, it's human beings -- trained ham radio=20 communicators that makes for a smooth race.

In New York, I'm Henry Feinberg, K2SSQ, for the Amateur Radio Newsline.

--

Next week,  how it all gets put together.  Please be with us. =20
(ARNewsline)

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ=20 Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain,=20 the RSGB and Australia's Q-News, that's all from the Amateur Radio=20 Newsline(tm). Our e-mail address is newsline @arnewsline.org. More=20 information is available at Amateur Radio Newsline's(tm) only official=20 website located at www.arnewsline.org. You can also write to us or=20 support us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia,=20 California 91066.=20

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Don=20 Wilbanks, AE5DW, saying 73 and we thank you for listening." Amateur=20 Radio Newsline(tm) is Copyright 2003. All rights reserved.

> 950 mHz Aural STLs can go a lot farther than 40 miles.

With US power limits, you can get pretty dicey even at 35 miles and up; I have worked on a 50 mile one in Puerto Rico, and we had to put up two antennas about 60 feet apart on the receiving tower and use diversity reception to overcome variances in the arrival of the signal. A classic is 740-AM in LA, with studios in LA and transmitter on Santa Catalina Island. The over-the water propagation varies so that a single receiving antenna will loose the signal often. This was written up in the 70's in one of the engineering magazines.

Yeah - don't put any processing between the Optimod and the STL. The Optimod does a nice job of keeping the STL from becoming overloaded. umarc mentioned a pair of Audio Prisms - those sound very nice and you could put those in front of the 8100. I had that setup about 12 years ago and it worked well. Since the Prisms are pretty old technology, you could probably find those somewhere for a good price.

LAST CHANCE!

The "Radio Crazy", it's back!!! You heard it first here, kiddies!

Last chance to invest in my zany scheme to acquire a "legacy" 1 KW fulltime AM station in S. Oregon.

Active or inactive investors with at least $10,000 each are welcome. No individual (including me!)can own over 49 percent of the stock. This is to prevent "bullies" from taking the helm!

Full asking price is only $100,000 WITHOUT real estate. The station billed over $227,000 in 2002.

City of over 20,000. County of over 100,000. Station is on the air for over 60 years. Country format.

An extra 25 percent (For example you buy 10 percent, you get 12.5 percent)for the first two investors. We want to show our gratitude to the risk-takers/founding Fathers!

All monies would be safely held in the escrow account of a communications attorney in the Washington DC area. I have no ticket to Brazil in hand! HI!

The "Radio Crazy" ain't THAT crazy. My last job in radio (2001)was Chief Engineer for a 5 KW fulltime directional AM in New York City.

Tel. (478)741-1710 in Macon, GA or email please. Only those fully identifying themselves will be told callsign and city of license.

Please, no "AM bashers" or other "negative nabobs" !!!

I am not only a genius but am modest. Contact my parole officer for references! (teasing!)

73,

Meyer Gottesman, W6GIV
aka "The Radio Crazy"
aka Moron Gottesman
aka Moronic Gottesman.

Want it to crank? Put two Texar Audio Prisms and a Stereo Max in front of the 8100. Set them properly, and it will crank!

"Keith Anderson" <ads@wexcfm.com> wrote in message

Isn't a Compellor just a limiter?  I have not problem adding yet another compression stage as that's the sound of radio these days, but if you want o process your sound, shouldn't you add an EQ in there too?  The newer Optimods have Eq stages in them.

I would put any processors you add before the Optimod.

"Going out of business sale"

Yippee, my parole officer has given me permission to run this posting and I have my one-way ticket to Brazil in hand!!!!

The "Radio Crazy", IT'S baaaaaaak!!!!

Part ownership in fulltime 1 KW AM in Oregon for sale. This is a joint venture. (You venture in, you go to the joint! Hi!)

Callsign and city of license will be disclosed to those fully identifying themselves. Please mention if you have a parole officer and/or have recently purchased ticket(s) to Brazil!

Active or inactive investors with at least $10,000 each are welcome. No individual can own over 49 percent and this includes me. We don't want no stinking bullies (grin!)

They are asking $100,000 WITHOUT real estate. Station is on the air for over 60 years. It billed over $227,000 in 2002. Amazing for a city that small.

Call (478)741-1710 or email please. I live in Macon, GA.

Please, no "AM bashers" or other "negative nabobs". Flame somebody else.

My parole officer says all monies have to be deposited in the escrow account of a communications attorney. Wonder why? (Frown!)

73,

Meyer Gottesman, W6GIV
aka "The Radio Crazy"

Not an advertisement, no, I'm not the PD, WSAI is simply one great kick ass
oldies 50 KW rock n roll flamethrower!
Live DJ's, no music past 1968 or so, a tolerable commercial load, all in all
very listenable. Clear Channel owned, but that hasn't seemed to screw it up
yet. Hope you can hear it where you live, pattern must turn northward at
night as Louisville reception goes to hell at sundown.
/regards,
Tom

Regular users of Passport are familiar with the publication's
editorial scope and rationale, but we would like to see a brief
mention of the alternatives to "World Band" when such options exist.

Larry Magne should think of another alternative and acceptable words
other than "World Band" to all the shortwave aficionados around the
world. The word "World Band" is only used for commercial

advertisements that describes a radio that has the capability to
receive foreign broadcasts in shortwave medium.

Andre

It does reduce toward Louisville at night. It frequently reaches Connecticut at
night after WDJZ goes off.

WSAI is indeed a very well-put-together station.  But in fact, except
for morning drive time and the request shows, it is voicetracked.

You are right about the old WCKY! I used to listen to it as a kid even. Every night the CBS radio mystery theater was on 1530:-)

I wonder if the nighttime pattern has changed? I have the same trouble you do here in Bowling Green. Must not be a lot of southwest radiation?

To bad they changed the classic call but Wonderful Sounds And Information is OK...

Regular users of Passport are familiar with the publication's editorial scope and rationale, but we would like to see a brief mention of the alternatives to "World Band" when such options exist.

Larry Magne should think of another alternative and acceptable words other than "World Band" to all the shortwave aficionados around the world. The word "World Band" is only used for commercial advertisements that describes a radio that has the capability to receive foreign broadcasts in shortwave medium.

The marketing people at Sony came up with the term World Band as a "sexier" alternative to shortwave, but the technology stayed the same.

I'll agree 100%. They sound good. I like the reverb too! I think their

pattern change occurs at west coast sunset, where they protect KFBK
Sacramento, I think. They are good in the Carolinas. Very strong.

Amateur Radio Newsline=E2=84=A2 Report 1371 - November 21,  2003

Amateur Radio Newsline report number 1371 with a release date of Friday,=20
November 21, 2003 to follow in 5-4-3-2-1.  =20
=20
The following is a Q-S-T.  Australia says goodbye to the Morse code and=20
the FCC says hello to a new way to regulate interference.  Find out the=20
details on Amateur Radio Newsline report number 1371    coming your way=20
right now.

(Billboard Cart Here)=20
=20
**

## RESTRUCTURING:  AUSTRALIA GOES CODE FREE

Australia is joining the no-code revolution.  Q-News Graham Kemp, VK4BB=20
is down-under with the details:

--

The Australian Communications Authority (ACA) is reviewing regulatory=20
and licensing arrangements for the amateur service. A discussion paper=20
was released in August 2003, and public meetings were held in 10 cities=20
around Australia. As a result of this extensive public consultation=20
process, the ACA has decided to discontinue the Morse code proficiency=20
requirement for the amateur service.

Background: Article 25 of the Radio Regulations of the International=20
Telecommunication Union sets out the international arrangements for the=20
amateur service.=20

The World Radiocommunication Conference (WRC) held from 9 June to 4 July=20
2003 in Geneva fundamentally changed Article 25.  The changes to Article=20
25 have provided the ACA with an opportunity to review and simplify the=20
current regulatory and licensing arrangements for the amateur service.=20
In August 2003 the ACA released a discussion paper that looked at the=20
changes made to Article 25, as well as exploring future options for the=20
amateur service in Australia.
Morse code proficiency requirement to be removed As a result of an=20
extensive public consultation process, the ACA has decided to=20
discontinue the Morse code proficiency requirement for the amateur=20
service. This decision was made considering public comments at the=20
meetings and initial analysis of submissions to the discussion paper.

The ACA will make interim changes to legislative instruments which will=20
immediately allow access to privileges previously available only to=20
those satisfying Morse code proficiency requirements.  The ACA is in the=20
process of amending the amateur radio licence conditions specified in=20
the Radiocommunications Licence Conditions (Amateur Licence)=20
Determination No. 1 of 1997 to reflect this decision. The amendments=20
will give holders of Intermediate and Limited Amateur licences access to=20
the same frequency bands as Unrestricted Amateur licensees; and holders=20
of the Novice Limited Amateur licence access to the same frequency bands=20

as Novice licensees.

The interim arrangements are expected to come into force on 1 January=20 2004.

I'm Graham Kemp, VK4BB, of Q-News Australia for the Amateur Radio=20 Newsline.

--

More on this in future Amateur Radio Newsline reports. (Q-News: Note: =20 Print version is expanded from audio report)

**

## RADIO LAW: FCC LOOKING AT NEW INTERFERENCE STANDARD

Turning to regulatory news here at home, word that the FCC is looking at=20 another way of determining what it calls acceptable interference levels. = =20
Termed "interference temperature," the Commission says that this is a=20 new model for addressing interference that takes into account the actual=20 cumulative R-F energy from transmissions of spectrum-based devices. It=20 would also set a maximum cap on the aggregate of these transmissions. =20

To test the potential usefulness and applicability of this approach the=20 agency has issued a Notice of Proposed Rulemaking. FCC docket item 03-289 seeks comment on various technical rules that would establish=20 procedures and use the interference temperature model on a limited basis=20 in the 6525 to 6700 MHz and portions of the 12.75 to 13.25 GHz bands.=20

According to the FCC, the "interference temperature" approach may=20 facilitate more intensive use of the radio spectrum, creating the=20 opportunities for new services and improving the predictability of any=20 interference to existing services. The current approach for managing=20 interference focuses on specifying and limiting the transmit powers of=20 individual spectrum based devices. What impact the adoption of an=20 "interference temperature" standard might have on Amateur Radio=20 operations has yet to be determined. (CGC Communicator, ARNewsline(tm),=20 other published reports)

**

## REGULATORY NEWS: FCC APPROVES WIRELESS INTERNET IN HAM SPACE BAND

The FCC has turned down an ARRL request to keep so-called wireless=20 Internet connections out of the 5.650 to 5.670 Gigahertz to avoid=20 interference with the Amateur Satellite Service. This, as the regulatory=20 agency makes another 255 MHz of spectrum available for Wi Fi use. Bill=20 Pasternak, WA6ITF, reports:

--

In a Report and Order in ET Docket 03-122 released on November 18th, the=20
FCC says it was taking action to alleviate crowding in existing wireless=20
Internet allocations.  Also, that it wanted to align wireless Internet=20
connectivity here in the United States with the rest of the world.

Amateur Radio has a secondary allocation from 5.650 to 5.925 Gigahertz.=20
That includes a 20 Megahertz wide satellite downlink segment from 5.830=20
to 5.850 Gigahertz.

An ARRL Bulletin says that back in September the League expressed=20
concerns about the potential for interference from these wireless=20
devices to Amateur Radio space operations.  But in releasing its=20
decision, the FCC says that its dynamic frequency selection and=20
transmitter power control requirements should be adequate to protect=20
amateur operations.  This, even though the FCC admits that they are not=20
specifically designed to do so.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF, in Los=20
Angeles.

--
=20
In rendering its decision the FCC said that it was not persuaded that it=20
should either add to or modify its proposed rules as requested by ARRL. =20
The Federal government itself is the primary user of the entire band. =20
(ARRL Bulletin, FCC)

**

## RADIO LAW:  FCC COMMISSIONER'S OFFICE CLARIFIES HER "BROADBAND NIRVANA"=20 REMARKS

The office of FCC Commissioner Kathleen Abernathy has expressed regrets=20
that her remarks in a September speech may have failed to make her=20
concerns about potential interference from Broadband over Power Line=20
sufficiently clear.  Responding to complaints from the ARRL and=20
individual amateurs, Abernathy's Senior Legal Adviser Matthew A. Brill=20
said that her office is sorry that the Commissioner's remarks may have=20
been interpreted as suggesting an absence of concern over harmful=20
interference.

The ARRL Letter says Brill has assured the League that ensuring that B-P-L and all new technologies avoids causing harmful interference to=20
licensed R-F users is important to Abernathy.  Brill termed it as a=20
bedrock position for the Commissioner. =20

Last September 22nd, in a speech to the United Powerline Council's=20
annual conference Abernathy expressed personal enthusiasm for B-P-L=20
calling it a Broadband nirvana.  That position was quickly challenged by=20
the ARRL and others in the ham radio community.  (ARRL)

**

Break 1

>From the United States of America, We are the Amateur Radio Newsline,=20
heard on bulletin stations around the world including the W3UU repeater=20
of the Harrisburg Radio Amateur Club serving Harrisburg Pennsylvania.

(5 sec pause here)

**
BREAKING NEWS:  EARTH HIT BY SEVERE GEOMAGNETIC STORM

A severe G-4 class geomagnetic storm is in progress as we go to air. =20
This, due to the arrival of coronal hole mass ejections related to the=20
returning sunspot group 484, now numbered 501 astronomers. =20

Thomas Hood, N-W-7-U-S, is the Propagation Editor for C-Q Magazine.  In=20
a November 20th posting to the V-H-F Reflector, Hood says that some=20
reporting stations show a K index of 9.  The current planetary K index=20
is 8 and the Aurora index is 10.  This means that there could be visual=20
Aurora is possible at low-latitudes. =20

What does this mean to ham radio operations? During the storm HF=20
conditions are poor.  So will those on the Medium Wave broadcast bands. =20
But in the world of 50 Mhz and above anything could happen and usually=20
does.  Keep your ears open, your radio on and enjoy it while you can. =20

Now long will this geomagnetic storm last and are more sunspots on the=20
way?  Ongoing information is in cyberspace at http://prop.hfradio.org=20
and on the W6YX VHF Reflector.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF.  (VHF=20
REflector)

**

ENFORCEMENT:  HAM ACCUSED IN WISCONSIN INTERFERENCE CASE

A peason described by authorities as a Wisconsin ham has been arrested=20
and charged with some high tech interference to public service=20
communications.  Amateur Radio Newsline's Bruce Tennent, K6PZW, has the=20
rest of the story:

--

The Wisconsin State Journal reports that a ham radio operator is being=20
accused of interfering with emergency radio channels in the city of=20
Madison over the past nine months.  According to the Journal,=20
authorities charge that twenty-five year old Rajib K. Mitra, a=20
University of Wisconsin Madison student, may have broadcast audio from=20
pornographic movies over the Madison Police Department airwaves.

The news article describes Mitra is a ham radio operator with a degree=20 in computer science. He was arrested Thursday November 13th after police=20 showed up at his apartment with a search warrant looking for radio and=20 computer equipment and pornographic audio.=20

According to a Madison police spokesperson, the interference usually=20 left the radio system dead for stretches from a few seconds to about 20=20 minutes but never on a regular schedule.  Al Schwoegler, the Madison=20 Communication Operations Supervisor said that this intermittant=20 operation added to the difficulty of tracking the source. =20

The interference came at times when police were dispatched on calls. =20 Authorities believe that the person jamming may have monitored police=20 radio traffic.

Helping to track down Mitra was Ralph Pellegrini. The newspaper article=20 identified Pellegrini is a ham operator and technician for Sprint PCS=20 who assisted police.  Authorities approached Pellegrini for assistance=20 when they thought the interference might be coming from a Sprint=20 cellular tower.  Pellegrini in turn gave a lot of credit for Mitra's=20 capture to those he termed as the Madison radio guys.  He notes that=20 they were able to hunt down Mitra in a city R-F environment that's=20 pretty bad.

Mitra was in the Dane County Wisconson jail as of Friday November 14th. =20 He has been tentatively charged with 16 felony counts of computer crimes=20 and could also face federal charges, according to Madison police.=20

For the Amateur Radio newsline, I'm Bruce Tennant, K6PZW, reporting.

--

Authorities hope that Mitra's arrest will end months of frustrating=20 interference to their radio communications system.  The complete story=20 is on-line at=20 http://www.madison.com/wisconsinstatejournal/local/61321.php  (Wisconsin=20 State Journal, QRZ.com, others)

**

ENFORCEMENT:  SKYWARN INTERFERENCE

The FCC has told an Indiana ham that he is to stay off of a 2 meter=20 repeater dedicated to emergency alerting operations.   This, in a letter=20 to Christopher Smith, KC9CAU, of South Bend.

In the note, the agency says that it has received a complaint about=20 Smith's on the air operation on a repeater system participating in the=20 St. Joseph County Skywarn system. The complaint alleges deliberate=20 interference and harassment to the repeater and refusal to refrain from=20 attempting communications on that system.=20

The FCC's letter tells Smith that it expects him to abide by any demand=20
that he stay off the repeater, as well as any other repeater where such=20
request is made by a repeater control operator or the system licensee. =20
Smith was given the customary 20 days from the date of the FCC's letter=20
to reply.  (FCC)

**

ENFORCEMENT:  ECHOLINK EXPLANATION SOUGHT

A Florida ham has some explaining to do for comments made over a linked=20
repeater system.   The FCC's Daryl Duckworth, NN0W, explains:

--

Duckworth:  "An inquiry went to WA3QCV, Timothy Horvath, of Flagler=20
Beeach, Florida, concerning operation on two repeaters:  WB2IXR at=20
157.015 Mhz and KG4IDD at 145.47 Mhz that are linked through the=20
Echolink  system.  The inquiry involves alleged threats and obscene=20
language."

--

The FCC also gave Horvath 20 days from the date of its letter for him to=20
respond.  (FCC)

**

RADIO LAW:  ANTI-PIRACT BROADCAST FLAG APPROVED

The government has approved a new anti-piracy system that will=20
theoretically make it harder for computer users to illegally distribute=20
digital TV programs on the Internet. This, with the goal is to speed the=20
transition to higher quality digital broadcasts and ensure such=20
programming remains free.=20

The five-member FCC voted unanimously to allow a "broadcast flag" to be=20
added to digital programming to block broader distribution on the=20
Internet on November 4th.  Broadcasters and the movie industry had urged=20
the Federal Communications Commission to take such action, while=20
consumer groups said it will force some people to purchase new=20
electronics.  (FCC, others)

**
=20
ON THE MOVE:  HF NET RELOCATING TO IRLP

Call it a sign of the times we live in. This as Tom Mc Glinn, KO6HA,=20
reports over QRZ.com website on big change for a long established high=20
frequency net that's taking to a different way to communicate.

Mc Glinn says that due to the urban lifestyle of many of the members of=20

the USS Hornet Amateur Radio Club, the group has decided to move its=20
weekly Net from 80 Meters to repeaters that are interconnected using I-R-L-P.  That's the Internet Radio Linking Project which permits the=20
world wide interconnecting of repeaters over the World Wide Web.=20

According to Mc Glinn, the net has been conducting tests and they have=20
worked out most of the bugs involved with such a move.  Once completed,=20
the U-S-S Hornet Net will hold the weekly gathering in the San Francisco=20
Bay Area using the facilities of the 147.210 repeater in near-by=20
Oakland.  Those outside the area we will be linked in using the I-R-L-P=20
Western Reflector.
=20
Mc Glinn adds that anyone on the planet who has I-R-L-P access to link=20
to the Western Reflector Subchannel 1, node 9251, on Mondays at 2030=20
Pacific time is invited to check in on the Net.  He says that you do not=20
need to be a member of the club to take part.  (QRZ.com)

**=20

CONFERENCES: CSVHFS IN ONTARIO CANADA NEXT JULY

The Ontario VHF Association and the Toronto VHF Society will be hosting=20
the 38th annual Central States VHF Society Conference.  The dates are=20
July 22nd to the 25th at the Delta Meadowvale Resort and Conference=20
Center in Mississauga, Ontario, Canada. =20

2004 marks only the second time that this conference has been held=20
outside of the USA.  More information and a registration form will be=20
available shortly in cyberspace at www.csvhfs.org and www.ovhfa.com =20
(VHF REflector)

HAMVENTION 2004:  AWARD NOMINATING PERIOD OPENS

Meantime, the planners of Hamvention 2004 say that the nominating period=20
is now open for its Radio Amateur of the Year, Technical Excellence and=20
Special Achievement awards program.  The Radio Amateur of the Year is=20
described as that special person who has made a long term commitment to=20
the advancement of amateur radio.  A well-rounded individual who has=20
contributed most of his or her lifetime to our hobby in some very=20
outstanding way.=20

A nominee for the Technical Excellence award should be a person who has=20
made an outstanding technical advancement in the field of amateur radio. =
=20
Something like a revolutionary new equipment design or mode of operation=20
that has impacted positively on the day to day operation of many hams.

Last but by no means least, a nominee for the Hamvention's Special=20
Achievement is the kind of special person who has made an outstanding=20
contribution to the advancement of amateur radio.  This award is usually=20
given to a respected amateur who spearheaded a single significant=20

project.=20

Documentation is beneficial. Magazine articles, newsletters, newspaper=20 clippings, videos, etc. will better inform the Awards Committee of your=20 candidate's accomplishments. All materials become the property of the=20 Hamvention and cannot be returned.=20

The nomination deadline is January 31 2004.  You can fill out the online form found at www.hamvention.org by clicking your mouse on the=20 words award nominations.  Printed nominations go to the Awards=20 Committee, Hamvention 2004, PO Box 964, Dayton Ohio, 45401.

And oh yes.  The deadline for all submissions is January 31st, 2004 =20 (Dayton Hamvention)

BREAK 2

This is ham radio news for today's radio amateur.  From the United=20 States of America, We are the Amateur Radio Newsline with links to the=20 world from our only official website at www.arnewsline.org and being=20 relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

NAMES IN THE NEWS:  KB2GSD VS. WJMK - PART 2

A follow up to an earlier story involving retired CBS newsman  Walter=20 Cronkite, KB2GSD, and a Florida television production company that he=20 says misled him and tarnished his reputation.  This,  when it persuaded=20 him to appear in videos that promoted prescription drugs and other=20 products. =20

The company, WJMK, filed suit last September after Cronkite tried to end=20 a contract he had signed to appear as the host of a series of videos,=20 including some called American Medical Review.  In their legal brief=20 responding to the WJMK action, Cronkite's lawyers say  WJMK  had assured=20 him that the videos would be educational and would not promote corporate=20 products.  These are claims that his lawyers say Cronkite subsequently=20 learned were false.

An attorney representing W-J-M-K, says that Cronkite's charges had no=20 merit and that Cronkite's lawyers were trying to disparage the other=20 side in the media.  Meantime, KB2GSD has filed a counter claim seeking=20 $25 million in damages from WJMK. (Published news reports)=20

**

NAMES IN THE NEWS:  LONG TO AMSAT JOURNAL

Ed Long, WA4SWJ, is the new Editor in Chief of the AMSAT Journal.  A=20 licensed amateur since 1970, Ed holds a BSEE from West Virginia=20 University and an MBA from Duke.  He is currently employed by SPX=20 Process Equipment in Delavan, Wisconsin.  He can be reached by e-mail to=20 wa4swj@amsat.org  (AMSAT-NA)

**

### EMERGING TECHNOLOGY:  SAFETYCAST BROADCAST TO YOUR CAR

Police or fire engines may soon be able to override the radio in your=20 car.  This, as Jacksonville Florida based SafetyCast announces that it=20 will soon test a new mobile alert system.  One that will  allow a police=20 officer or ambulance driver to take over a car radio within a distance=20 of about 1000 feet and broadcast a brief alert tone and warning message.

Emergency services officials are praising the development.  They claim=20 that there is a warning crisis because motorists in today's sound-proofed vehicles can't hear sirens, or just aren't paying attention.

But the CGC Communicator reports hearing from one engineer who's worried=20 about the Special Temporary Authority the FCC gave for the trial.  He=20 says his studios and E-A-S receivers are located 100 feet from a highway=20 and one block from a hospital.  He feels that SafetyCast might jam an=20 Emergency Alert System messages that are  coming in.  (CGC Communicator)

**

### SPACE:  FRENCH AND RUSSIAN LAUNCH ACCORD

France and Russia approved an accord intended to pave the way for the=20 eventual launch of Russian rockets from a French launch pad in South=20 America.   The agreement, signed on November 11th is the first of its=20 kind between Russia and a European Union country and is a step toward=20 the launch of Russian Soyuz-ST rockets from the E-S-A Kourou launch pad=20 in French Guyana.  Most ham radio satellites are orbited from the Kourou=20 facility.  (Published reports)

**

### INTERNATIONAL - HOLLAND:  RADIO NETHERLANDS BROADCAST CHANGE

Radio Netherlands says that its shifting the frequency of its Dutch=20 language transmission to the Far East, East and Southeast Asia at 1300=20 U-T-C.  This broadcast can now be heard on 7 point 380 MHz.  The reason=20 for the change is to avoid interference to the transmission.  (Media=20 Network)

**

### DX

In D-X,  word that ON4LAC, is active portable 3B8 from Marutius through=20

November 23rd.  His activity has been mainly on 20 and 15 meters using=20
SSB and PSK, but is expected to be on RTTY as well.  He will leave=20
Msrutius and head to Reunion Island to be active as FR5 stroke ON4LAC=20
during the period of November 26th and December 15th.  After this=20
activity, he will head back to Mauritius and will be active again=20
between December 17th and 27th.  QSL direct to  his home callsign. =20
(OPDX)

Also, K5LB has announced that he will be going to Swaziland next March=20
and is looking for several operators to tag along.  His plans include a=20
trip through the Kruger Game Park. If interested, contact him at=20
frosty1@pdq.net  (OPDX)

**

THAT FINAL ITEM:  VOLUNTEERISM AND THE NYC MARATHON

For the last two weeks New York City Marathon Communications Coordinator=20
Steve Mendelsohn, W2ML, has been sharing with us the behind the scenes=20
story of how 411 hams move the race along. In our final part in this=20
series Henry Feinberg, K2SSQ, takes a look at the volunteers that make=20
it all hapen:

--

The ham radio communications effort for the New York City Marathon is=20
volunteer driven.  And, as with any event, volunteers do come and go. =20
We asked the lead volunteer, Steve Merndelsohn, W2ML, to explain how=20
this situation gets covered:

--
Audio only.  Hear the newscast in mp3 at www.arnewsline.org
--

It's primerally the local clubs that supply the volunteer ham radio=20
communicators.  W2ML says that he has a special way of introducing them=20
to what Marathon communications is all about:

--
Audio only.  Hear the newscast in mp3 at www.arnewsline.org
--

And speaking about volunteers, we asked Steve what about his own role in=20
all this.  How much of his life does he devote to setting up this all=20
volunteer communications effort?  His answer may astound you:

--
Audio only.  Hear the newscast in mp3 at www.arnewsline.org
--

And there you have it.  An insiders look at the massive all volunteer=20
ham radio communications network that literally runs the New York City=20
Marathon. It's a view that only someone who has been there every year=20

since Amateur Radio has been involved, can give. =20

For the Amateur Radio Newsline, I'm Henry Feinberg, K2SSQ

--

Our thanks to Steve Mendelsohn, W2ML, for sharing his experiences with=20
us, and with you.
 =20

Steve,

What are you talking about old man? This is the reports of Radio
Nederland regarding about "world band" on their websites, the links
below:

http://www.rnw.nl/realradio/booklist/html/passport.html

http://www.rnw.nl/realradio/features/html/cr031106.html

Why don't you read those articles first before you make any
comments or postings in this newsgroup so you wont humiliate yourself.
It will be too embarrassing for you that you have a low comprehension
and a low IQ. Perhaps you don't realize that in Google shortwave
newsgroup, this is the most popular site being read all over the world
to get information. Your comments or postings reflects you own
personality and also who you are.
In this newsgroup, you definitely going to have a high blood
pressure, so take it easy and don't forget to take your meds as soon
as you get up in the morning. You, and the ones around you will have a
much better day.

Andre

Let's see if I understand this: "World Band" describes shortwave, but was a term made up by an advertiser and is " _used only_ for commercial advertisements" even though the term _is_ now almost universally used bu just about everybody as a generic term for shortwave broadcasting and to describe shortwave radios, and so we should quit using the term?? Huh? Come again? Is _that_ what you're saying? Could you send me some of whatever funny cigarettes you're smoking?

You are right about the old WCKY! I used to listen to it as a kid even. Every night the CBS radio mystery theater was on 1530:-)

I wonder if the nighttime pattern has changed? I have the same trouble you do here in Bowling Green. Must not be a lot of southwest radiation?
>>

Originally WCKY, Covington, KY, this station protects the co-channel Class A in Sacramento, CA, using four towers.

Therefore, nearly no radiation SW, W or NW.

WCKY had the frequency all to itself for quite a while.

The Sacramento station, KFBK, was a conversion from, then, a Class IV to a Class I-B.

Who cares who came up with the term?  While "shortwave"
seems more of a technical description for HF (how is someone
unfamiliar with radio to distinguish between longwave,
mediumwave, shortwave, microwave, etc.?), "world band"
appears to be a better term for conveying the idea that
international broadcasts are heard on the HF bands.  (Of
course, there's more on shortwave than just international
broadcasts.)

One of the wonderful things about the English language is its versatility. "World Band" is descriptive, not just in terms of an advertising slogan but in describing a service that can, literally, serve the entire globe.

"Passport to World Band Radio" is a perfect title for a reference book that covers radio throughout the world. No one gave Grundig, AOR, Drake and other manufacturers exclusive permission to use the term. It probably came from and advertising agency's creative team.

No name change is needed.

Sure. But you realize there is a relatively involved procedure to get it moderated, right?

For the Big 8 hierarchy -- rec.*, soc.*, comp.*, news.* and four others whose names I forget -- you essentially have to go through the process originally used to create the group - request for discussion, call for votes, etc. It is not a quick process.

Hey all,

My station is interested in getting our call letters printed on our
windscreens, instead of using traditional mic flags. My boss has seen it
before, but we haven't had any luck finding a place to do it.

Has anyone had this done, or know of someplace that does it?

TIA!

Royce Dean <swl3@ibm.net> had written:
| I'll agree 100%. They sound good. I like the reverb too! I think their
| pattern change occurs at west coast sunset, where they protect KFBK
| Sacramento, I think.

Yes -- it (then-WCKY) was strong in eastern and central Missouri
for a couple of hours after sunset until the switch was flipped.

The reference to reverb is amusing -- in the early 1970s I recall
WCKY as an easy-listening station -- with reverb! Mix in a little
groundwave/skywave phase cancellation, which one occasionally got
for WCKY near St. Louis, and you got quite the ethereal effect!

That's only the *second* most inappropriate use of reverb I've ever
heard -- the most inappropriate was when KPRC in Houston
was a news/talk station in head-on competition with KTRH -- and
used reverb in 1985 and part of 1986!

I chose XM Radio about a month ago, partly from the advice received
in this n/group, and partly after
looking at both outfits' list of channels.
I wanted drama, audio book readings, BBC World Service, and certain
kinds of music (50s, 60s, classical etc).  XM had these and the
layout of the channels seemed
more specific - or do I mean thematic? -  than that of Sirius.
So, I can't give any opinion on what Sirius is like, but I can tell
you  I'm delighted  with most of what I get on XM.
Haven't had the FM/AM radio on for more than a few minutes since getting the
satellite receiver connected!
I use the equipment only in the house, not in a vehicle;
the sound quality is good enough for my undemanding needs, but I
do notice the volume level is only about 60 per cent of the FM radio's; not
a problem as I just turn up the volume.  I don't know if this is
something peculiar to my particular setup or not, though.

I am using the Delphi  XM Sky-Fi, which works the same way.  The sound
is definitely Superior to that of FM in my car.  Your alternative,
other than replacing your radio, is to buy a wireless FM modulator,
which is available from CCrane.

I've not had very good results with my portable cd player running thru the
cassette player via a dummy cassette. Sometimes it sounds ok, and sometimes
it is muffled, I guess because of  misalignment of the two heads. Not a good
system, IMHO. However, if you have an input jack on your car radio, that
works great.
regards,
Tom

I just purchased the Delphi XM Radio Roady.  Connected to car radio via the cassette.  Absolutely no degradation to any radio function. Sound quality from the XM unit better than on air stero FM.  If you like radio, you will love the Roady!!.  For what its worth, my Roady is connected to a 2002 Honda that has in addtion to the cassette player a 6 disc CD changer.

Hope that helps.  Enjoy XM Radio

There _IS_ another alternative, the "XM Commander", which has the modulator
built-in. See the www.xmradio.com site.  It's somewhat like the old Pioneer
XM unit, but brought up to date.

One __warning__ about using a modulator.  Unlike FM stations, XM doesn't
heavily process their audio. You have to run the modulator audio at a
considerably lower modulation level than you hear on over-the-air stations.
Otherwise you will overdeviate / overmodulate on peaks.

I have a Roady.  I was real skeptical about the sound quality I'd get
by something plugged into the cassette player as its interface.
However, I am VERY satisfied with it!

Mark

I'm still working with Don LaFontaine's voice.

I used to use the cassette adapter with the Kenwood Here2Anywhere tuner. I heard distortion. I now have a Pioneer "XM Ready" radio/CD player with the XM tuner under the rear seat and the Sirius tuner plugged (with an adapter) into the AUX input. No distortion. Great sound, especially on the Sirius Jazz channels.

I'd be eternally grateful if XM would get rid of those screaming jocks on the oldies channels. It makes me feel like I'm listening to terrestrial radio and paying for it.

I also have the Kenwood modulator. Input levels are touchy, so I'm thinking of using it for my cell phone "hands free" function.

Rich

WCBN WILL DESTROY YOUR FEEBLE FORMATS

WCBN - 30 Years of Freeing Your Mind - Listen to us online!

WCBN is the University of Michigan student-run community freeform radio station in Ann Arbor, Michigan. We broadcast at 200 watts to the University and its surrounding communities from the basement of the Student Activities Building in downtown treetown.  We have been broadcasting a genre-less overview of music, news, and public affairs for 30 years.

WCBN's musical format is freeform, with some specialty shows. Freeform involves all different kinds of music, including jazz, reggae, blues, hip-hop, country, rock, and just about everything else under the sun. Instead of telling our DJs what to play, we allow them to select their own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an intelligent fashion, and show links between musical genres.

Click here to listen to our live WCBN-FM Ann Arbor broadcast!

Here's the results of the most recent DX test that have been received here:

Saturday, November 1, 2003 - WJNT-1180, Jackson, MS 12:00 am-1:00 am CST:

DXers in various areas of the country were able to hear this test - the Morse code, at least. Adam Myrow in Memphis, TN says he had figured that he'd have no trouble receiving the test, and he was correct - WJNT boomed in for him, over the usual interference from WHAM, KGOL, and Radio Rebelde. Les Rayburn in Helena (Birmingham), AL said the situation was much the same for him at his QTH; he noted a clear switch to day power on WJNT. Dave Hochfelder in Highland Park, NJ heard a weak but copyable Morse ID from WJNT, but that was all the audio that made it thru WHAM and the Cuban. Bruce Collier in York, PA reports he heard a snippet of Morse from WJNT, but he didn't feel that was enough for a veri. James Niven in Moody, TX detailed his reception of the WJNT test, saying he was able to hear both the Morse ID and the Bruce William's Show, WJNT's regular programming. Willis Monk in Old Fort, TN mentioned that he also heard a few code IDs from the WJNT test, but mentioned interference from WHAM and the Cuban. Partick Matin in Seaside, OR also caught the Morse ID, and noted that it was weaker than in the past, but said that he felt that was due to all the solar activity of later. He also reported that Jason Brose in Kansas City, KS had told Patrick that he'd picked up the test. Also, Frank Aden in Boise, ID heard a few tones, but he wasn't sure that it was WJNT - KOFI was dominant for him. But Bruce Winkelman in Tulsa, OK says the test, both code IDs and the regular programming, were heard well at his QTH. Gerry Bishop in Niceville, FL heard several code IDs from the test. and in Winnipeg, MB, Shawn Axelrod was also able to hear several code IDs from WJNT under WHAM and Radio Rebelde.

However, Don Kaskey in San Franciso, CA says he checked and found the usual dominant station on that frequency, KERI-Wasco, to be off or on much reduced power at the time of the test, but didn't hear WJNT. Andy Gardner tried for the test from Cancun, MX, but heard nothing but Radio Marti and the Cuban. Robert Wien in Azuza, CA sat on 1180 kHz for the full hour, but heard a presumed Mexican station on the frequency, which he felt was XEDCH. Kevin Redding in Mesa, AZ, also heard XEDCH, KOFI, and KERI at times, but he didn't receive the WJNT test. Bob Karchevski in Sunnyvale, CA tried for WJNT and got KLAY-WA instead. And there were some places in the East that didn't hear the test - Gordon Bell in Troy, NY reports WHAM predominated at his QTH. RC Watts in Louisville, KY reports that both he and fellow DXer Randy Davis, also in Louisville, were unable to hear the test - there was too much interference from a Latin station.

That's all for now...

Lynn.

---------------------------------------------------------------

it was a few years ago, and i can't remember the station (commercial am) ... but on the day of a critical mass bridge ride one sydney dj suggested that people "sideswipe the bastards" if they got in the way of some poor sap late home for the evening news.

if the worst comes to the worst, remember that a krypto lock makes a very effective weapon and windscreen smasher.

keitha

Looking for Automation, Traffic and Billing, or program delay software?

Manufacturer of digital audio automation systems and traffic & billing accounting software packages for the Radio industry.

The Phantom Digital Audio System.  The Phantom is a complete self-contained digital audio automation system for use with radio station automation of satellite program sources, live assist, and music directly from hard disk.

The Replicator.  The Replicator is a multi-event digital audio long form program recorder capable of recording multiple audio feeds and GPI control signals with simualtaneous playpack and GPI replication.

Traffic & Billing Systems.  DOS & Windows95-based Traffic & Billing

software packages. Products range from basic Traffic and Accounts
Receivable on a single-user PC to multi-user network systems.

Call 478-745-5500 today for more information or visit us online at

For sale:

(The "Radio Crazy" is back!)

Partial interest in 1 KW fulltime AM radio station in Oregon. City of about 20,000 population. County population exceeds 100,000. This station is on the air over 60 years.

They are asking only $100,000 for the station WITHOUT real estate and $900,000 WITH REAL ESTATE. Very valuable land on a main drag and near an Interstate.

Joint venture. Active or inactive investors with at least $10,000 each are welcome. All investors would be on the board with full voting rights if desired.

The station billed over $262,000 in 1999.

Tel: (478)741-1710. I am NOT a crook! I am also NOT a shill, broker, agent, owner or part owner.

Only those fully identifying themselves will be told the callsign and city of license.

73,

Meyer Gottesman, W6GIV
aka "The Radio Crazy"
aka Moron Gottesman

# Amateur Radio Newsline™ Report 1369 – November 7,  2003

Amateur Radio Newsline report number 1369 with a release date of Friday, November 7, 2003 to follow in 5-4-3-2-1.

The following is a Q-S-T.  Rain brings the California wildfires under control but ham radio stays on the job.  A report from the scene on Amateur Radio Newsline report number 1369 coming your way right now.

(Billboard Cart Here)

**

## RESCUE RADIO:  CALIFORNIA WILDFIRE COMMS WINDING DOWN

The Southern California wildfires are on their way to full control.  This as the winter rains come early to the region.  As a result, many hams who had been full time fire communications volunteers have gone back to their regular jobs and ham radio emergency communications efforts are winding down.  Others are still on the front lines and now its time for assessment.  Gordon West, W-B-6-N-O-A, spent most of last week at a Red Cross Shelter in the city of Fontana.  He takes a look at the contributions made by the regions Amateur Radio communicators:

--
Audio report only.  Hear it by downloading this weeks audio newscast file at
http://www.arnewsline.org
--

Emergency service officials agree that having ham radio made a big difference in successfully handling this disaster situation.  (ARNewsline(tm))

**

## RESCUE RADIO:  REPEATERS LOST IN SOCAL WILDFIRES

We all heard the grim statistics of the homes and businesses were destroyed by this years California wildfires over a million acres of land has been scorched. But there is one total that the mass media won’t report. That’s the number of ham radio repeaters knocked off the air by the blazes. While exact call signs are not yet available, we did ask reporter Matt Lechleiter, W6KGB, to find out which radio sites were most affected.

--

It's estimated that close to 30 repeater or remote base systems have been affected by the recent Southern California firestorm. These systems are either off-air, were before switching to backup power, or were destroyed by the fires. The number of systems actually destroyed by the fires is unknown - we'll follow up on this in a subsequent report.

Communications sites affected include Oat Mountain just north of Los Angeles, Sunset Ridge and Heaps Peak to the East, and Mount Otay near San Diego to name a few. Each of these major sites lost power due to one of the fires. News reports say that it could be over a month before power is restored to these locations. Until then, battery and generator power are keeping the commercial and amateurs two-way systems on the air.

There are also several repeaters that are believed to be safe but which are still off the air. This is because they live at more remote mountaintop sites that also lost electrical service to the flames. And just like the more accessible sites that I mentioned, it might be a quite a while before commercial power is returned.

For the Amateur Radio Newsline, I'm Matt Lechliter, W6KGB reporting.

--

If you are a Southern California repeater operator whose system was affected by the firestorms, or if you know of one that was, please send the details to us. We will include it in an upcoming report. Our address in cyberspace is nerwsline@arnewsline.org (ARNewsline(tm))

**

HAM RADIO IN SPACE: NEW GEAR FOR THE ISS

Radio gear from some well known ham radio manufacturers is in space. This, as the group known as Amateur Radio on the International Space Station announces the delivery of the so-called Phase 2 ham equipment to the ISS. Norm Seeley, KI7UP, has the details in this report:

--

A Russian Progress supply rocket has delivered a Kenwood TM-D700E, dual band transceiver to the International Space Station. The installation of this new radio will mean a significant boost to the power output of the ARISS station from 5 watts to 25 watts.

The Chairman of Amateur Radio on the International Space Station is Frank Bauer, KA3HDO. He says that the software for the D700 has been programmed for five modes of operation.  These are for standard F-M phone, crossband repeater, APRS, packet and an emergency mode.  Bauer predicted that APRS probably will be the default mode when a crew member is not actively using the ham station.

Next up will be gear from Vertex-Standard, the Yaesu brand folks.  Bauer says that a Yaesu FT-100D, some SSTV equipment, along with new headsets, will be taken to the space outpost on Progress Flight 14P.  Look for it to launch in January.

But says Bauer, that will be the endof the transport of any more ham radio gear for quite a while.  At least until the space shuttle returns to flight in September 2004.

But that in itself could be a blessing in disguise.  KA3HDO says that  the equipment still on the ground will be tested this month at the Service Module facility in Moscow.  This will permit making sure that the Phase 1 and 2 systems are compatible. RF testing will also take place.

According to Bauer, current plans call for the current Expedition 8 crew of Mike Foale, KB5UAC, and Alex Kaleri, U8MIR, to install the new hardware after ground tests are complete.  Previous crews already installed four Amateur Radio antennas to cover HF, 2 meters, 70 cm and microwave frequencies.

For the Amateur Radio Newsline, I’m Norm Seeley, KI7UP.

--

What about hams on the ground getting more chances to talk to the crew on the ISS?   Bauer says he's been working with U-S and Russian space officials to have them dedicate a few additional hours each month for operation and amateur station maintenance.  (ANS, ARISS K7CCC)

**

HAM RADIO IN SPACE:  SPAIN SCHOOL CONTACT A BIG SUCCESS

Still with news of ham radio on board the International Space Station, word that the Ourense, Spain school contact on October 23 was very successful.  75 children and 25 parents gathered at Ceip Seixalbo school as European Space Agency astronaut Pedro Duque answered sixteen questions in Spanish using the ARISS radio system.  All nationwide radio, TV broadcasters, and newspapers were present.  Duque has since returned to Earth along with the Expedition 7 crew. (ANS, ARISS)

**

Break 1

>From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the N5LEZ linked repeaters serving Wichita Falls and Vernon Texas.

(5 sec pause here)

**

RADIO LAW:  HAM ACCUSED OF AIRPORT SECURITY BEACH GETS CONGRESSIONAL SUPPORT

The ham who is accused of breaching airport security has gotten some unexpected congressional support.  Amateur Radio Newsline’s Mark Abramovich, NT3V, has the rest of the story:

--

Leading Democrats have openly criticized federal authorities for prosecuting Nathaniel Heatwole, W-Zed-3-A-R.  Hes the ham who admits to planting banned items on airliners, allegedly to show flaws in airport security.  And some in congress think he is almost a hero for pointing out the Transportation Security Authority's inability to properly protect airline travelers.

Minority Leader Nancy Pelosi is quoted in print as saying:  " "I don't think he had criminal intent.  I think what he was trying to do was to show how exposed we are and what our vulnerability was, and he tried to tell TSA and he gave a trail to them."

Pelosi said that if theres any penalty imposed, it should be some kind of community service.  And Representative Ed Markey, a powerful  Democrat from Massachusetts agrees.  In fact, Markey says that any community service sentence imposed on Heatwole should be with the TSA.   And  Markey adds that TSA officials should listen to him so that they know exactly how to prevent a terrorist from doing the very same thing.

And even the Republicans are getting into the act. Representative John Mica of Florida is chairman of the House aviation subcommittee.  He said that prosecutors should concentrate on people who actually pose a threat, adding that Heatwole should not be the fall guy.

None of the politicians are not trying to excuse Heatwole’s action, but they more and more are beginning to agree with Pelosi and Markey who apparently believes that the punishment should fit the crime.

For the Amateur Radio Newsline, I’m Mark Abramowicz, NT3V, in Philadelphia.

--

Heatwole is headed back  to court on November 10th for a preliminary hearing.  What was not expected is the level of support of some in congress and the obvious pressure that puts on prosecutors working on the case.  (From published news reports)

**

RADIO LAW:  THE BPL WAR - THE ARRL VS. MANASSAS VA.

The ARRL has put officials in Manassas, Virginia, on notice that the League will act on behalf of its members.  This, to ensure full compliance with  FCC regulations when the city's Broadband over Power Line system starts up in a few months.

Manassas is a suburb of Washington, DC. The League said that it was responding to media reports that Manassas has approved plans for a citywide B-P-L rollout in the near future. As such, ARRL Executive Vice President David Sumner, K1ZZ, has faxed the Mayor of Manassas to point out the potential for RF interference from and to any Broadband over Power Line data distribution system. (ARRL)

**

ENFORCEMENT: FCC ISSUES 2ND LARGEST FINE IN HISTORY

Meantime, the FCC has proposed issuing the second largest fine ever for on a broadcast indecency issue. Amateur Radio Newsline’s Bruce Tennant, K6PZW, has the details:

--

The FCC wants to force Infinity Broadcasting to pay a fine of $357,000. This, for airing a shock jock radio segment in which a couple was said to been involved in the most intimate of human experiences in New York City’s famed St. Patrick's Cathedral.

According to news reports, the FCC proposed record forfeiture is in response to complaints from the public following an August 2002 broadcast of the "Opie and Anthony" show and aired over thirteen Infinity owned radio stations. The nationally syndicated show was canceled a week later and hosts were fired.

Four commissioners voted for the fine. The fifth said the agency should have taken even stronger action. He said that the FCC should have gone after Infinity's radio licenses and taken their stations off the air.

Infinity has 30 days to pay the fine or appeal. The company has indicated that it will use the legal recourse.

For the Amateur Radio Newsline, I’m Bruce Tennant, K6PZW, in Los Angeles.

--

If upheld the amount paid would be second only to the $1.7 million dollars Infinity paid in 1995 to settle several cases against shock-jock Howard Stern. (FCC)

**

ENFORCEMENT: USERS RESPONSIBLE FOR REPEATER INTERFERENCE

Users and not the operator of a repeater are responsible for interference problems to another New Jersey repeater system. This is the gist of a September 12th letter to Andrew Woerner, K2ETN, who operates a repeater bearing his callsign.

Back on July 7th the agency notified Woerner that it had received complaints that his repeater, operating on the 146.355/146.955 MHz channel pair, was causing interference to the coordinated W2RAP repeater on the same frequencies. The complaints alleged that Woerner’s repeater was previously coordinated but that it has relocated since the coordination was issued.

The FCC requested that Woerner provide information in response to the complaints. He did, and in a follow-up letter, the FCC said that it has reviewed his information as well as detailed reports provided by the Metropolitan Coordination Association and the Area Repeater Coordination Council.

The FCC says that coordination does not appear to be an issue in this case. Rather, the interference problem seems to result from users of the K2ETN repeater, which is located in Northern New Jersey, attempting to access that repeater from locations in Southern N/ew Jersey. As such its repeater users who are interfering with the W2RAP repeater and not the person running the K2ETN machine.

The bottom line. The regulatory agency says that this situation does not appear to warrant its intervention. Instead its calling on everybody to work together to minimize any interference to the W2RAP machine. (FCC)

**

## ENFORCEMENT: FCC PROPOSES $120,500 FOR ANTENNA STRUCTURE VIOLATIONS

Meantime, its the fine of all fines for radio tower violations. This, as the Federal Communications Commission releases a Notice of Apparent Liability on October 31st. One proposing a $120,500 forfeiture against SpectraSite Communications, Inc., of Cary, North Carolina for safety-related violations of the Communications Act and the Commission’s antenna structure rules.

Specifically, the FCC is going after SpectraSite for its failure to register and light its antenna structures following an investigation conducted by the Commission’s Norfolk, Virginia Field Office.

The FCC says that the amount of the proposed fine represents the statutory maximum available. The Commission says that it decided to propose a significantly higher forfeiture than generally used in such cases because SpectraSite has a prior history of antenna structure rules violations. It says that SpectraSite has received three previous forfeitures in less than three years for at least 13 instances of failure to comply with the antenna structure rules. (FCC)

**

## RADO LAW: EMDERGENCY OFFICIALS CONCERNED ABOUT PUBLIC ACCESS TO "MIRT"

Emergency responders are concerned that MIRT, or mobile infra red transmitters are falling into the wrong hands. Mainly, into the hands of people not willing to obey traffic laws.

A mobile infra red transmitter allows personnel aboard emergency vehicles responding to emergency calls to quickly change specially-equipped traffic signals in their favor. That was fine until Internet websites began offering the same devices for use by the public for around $300 a pop.

Unlike radar jammers and certain laser detectors that emit radio signals, the mobile infra red transmitter and other signal changers send out a beam of invisible light. Since light is not controlled by the FCC the devices do not run afoul of the agency’s rules.

Needless to say that this is causing concern for those who rely on the technology for legitimate needs. Don’t be to surprised if states begin enacting their own laws to control the sale and purchase of the units.

More on the situation and the device is in cybrspace at
www.detnews.com/2003/commuting/0310/26/a01-307303.htm and
http://www.themirt.com (CGC, others)

COMMUNICATIONS CRIMES: INDUSTRY VS. IDENTITY THEFT

Microsoft and other technology giants have launched an industry alliance to thwart identity theft and boost confidence in e-commerce. The Coalition on Online Identity Theft will campaign to improve e-commerce record-keeping, beef up Internet security and enforce penalties against identity thieves. The formation of this group comes in response to growing concern over the growing tine of identity theft crimes and government pressure on industry to help to thwart it. (Published news reports)

BREAK 2

This is ham radio news for today’s radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

T-HUNTING NEWS: THE BIRDS OF FALL

If you are into hidden transmitter hunting, listen up. This one is for you. Keeping track of over 300 migrating radio tagged birds. Joe Moell, K0OV, is here with the details.

--

Since 1998, you've heard me reporting on hams and scanner fans tracking Burrowing Owls that migrate from Canada to southern states and Mexico. Researchers are so impressed by the capabilities of hams to do this sort of thing that they are asking for help with other critters. Right now, we're starting our biggest ever project, with more birds and more states involved. Nick Myatt of the Arkansas Cooperative Fish and Wildlife Research unit has radio-tagged 360 American Woodcock in Minnesota, Wisconsin, and Michigan, and he wants hams to help him find out where they're going. They're heading out now, and the list of possible stopover and destination states is big, including Southern Minnesota, Southern Wisconsin, Southern Michigan, Iowa, Illinois, Indiana, Kentucky, Missouri, Eastern Kansas, Eastern Oklahoma, Arkansas, Tennessee, Mississippi, Alabama, Louisiana, and Eastern Texas. If that's where you live or travel, please check my Web site for the list of active frequencies, all between 150 and 152 MHz.

Also at this time, Dave Sherman, a Biologist with the Ohio Division of Wildlife, is looking for help in keeping track of two radio-tagged Sandhill Cranes that should be leaving Ohio about the time you hear this. More information, including the frequencies, is on the Web. Go to www.homingin.com

Besides the frequencies, you'll learn how to identify the special characteristics of a radio tag signal, and you can subscribe to an e-mail list for fastest notification of these studies. That's homingin -- one word -- homingin.com

>From southern California, this is Joe Moell K-zero-Oscar-Victor, for Amateur Radio Newsline.

--

Again, more information is at Joe’s website. Its in cyberspace at www.homingin.com. And remember: homingin is one word. (K0OV, ARNewsline(tm))

**

NAMES IN THE NEWS: QCWA SEEKS NEW G.M.

In other news, word that Jim Walsh, W7VLN is resigning as the General Manager of the Quarter Century Wireless Association and the groups Board of Directors is looking for a replacement. Among the responsibilities are attending all meetings of the QCWA board, keeping full records for the organization and conducting the general correspondence. A solicitation for nominees is on line. You will find it in cyberspace at www.qcwa.org/manager.htm (QCWA)

**

CONFERENCES: 30TH ANNUAL EASTERN VHF/UHF CONFERENCE

The 30th Annual Eastern VHF/UHF conference will be held next April 16th to the 18th, at the Radisson Hotel in Enfield, Connecticut. Planners say that the conference has been moved to the spring time to help alleviate numerous conflicts with other ham radio activities and vacation schedules in August. Guest speakers, proceedings, articles and overall volunteers are being solicited to help out. Prize donations are also being solicited from vendors and members. More information is available from conference chairman Bruce

Wood, N2LIV, by e-mail to bdwood@erols.com (VHF Reflector)

**

BEACON NEWS: C6AFP COMING BACK ON THE AIR

Steve Rutledge, N4JQQ says over the VHF Reflector that the C6AFP beacon in grid square FL16, should be operational soon. This, thanks to W4WSR who rebuilt the old one that WZ8D originally supplied.

That one took a lightning hit last summer. Rutledge says that he was able to salvage the RF board but that was it.

Rutledge thanks C6AGN, whose Q-T-H the beacon now lives at. This is in Coco Bay, Green Turtle Cay, Abaco, The Bahamas. He says that Bill should be back on the island on or about the time this newscast hits air. Hopefully we will hear the beacon sometime later this month. (VHF Reflector)

**

INTERNATIONAL - INTRUDER WATCH: PIRATES OF THE PACIFIC

On the intruder watch scene, VK6XW in Albany Australia reports over 130 of them in the ham bands in recent days. The majority are foundd on 20 meters and appear to be Indonesians, with the rest being Asian Intruders including a number of fishing boats. VK6XW says that the boats also use Amateur Radio VHF frequencies for ship-to ship communication.

Meantime, Chris Wright, VK2UW in Lighthouse Beach New South Wales Australia reports on other pirates in the Pacific. This group is using Amateur Radio calls such as VK4ZLY, several Zed L calls and American calls -- portable VK. These are also on 20 meters and Chris says that they have become a major headache to a number of regularly schedule ham radio nets. (Q-News)

**

DX

In D-X, word that XV9DT is active as 3W22S now until the 31st of December. The special callsign is to celebrate the 22nd South East Asian Games, hosted by Vietnam. (GB2RS)

Also, HB0/HA0HW/P and two other stations will be operating from a location 1350 meters above sea level in Liechtenstein through the 10th of November. The three operators will be active on 160 to 10 meters, with an emphasis on the low bands. Modes used will be CW, SSB and RTTY. QSL as directed on the air. (GB2RS)

**

THAT FINAL ITEM: NYC HAMS RUN THE RACE

Kenya again ruled the New York City Marathon but it was ham radio that kept the race running.  Amateur Radio Newsline's Henry Feinberg, K2SSQ, takes a look at the November 2nd event and  the radio amateurs who kept it moving along:

--

Steve Mendelsohn, W2ML: "When people say 'why do you do it' my answer is always the same.  I'm in it for the T-shirts."

--

And after 27 years as Communications Director for the New York City Marathon, Steve Mendelsohn W2ML, has to have quite a collection.  But Mendelsohn is also the first to tell you that he is only a small part of a big ham radio organization that keeps all the races within the New York City Marathon moving. And 2003 was no exception:

--

Mendelsohn:  "At about 8 o'clock we went to the actual starting line at the Verrazno Narrows Bridge and Alan fired the air-horn that's starts the race for the athletes with disabilities.  And, 15 minutes after that it was the start of the wheel-chair race; and 15 minutes after that was the start of the hand-cranked race and fifteen minutes after that the elite women.  And finally, at 10:07 our operators climbed into vehicles -- because we maintain control of all of the vehicles on the course for safety purposes -- and we use Amateur Radio to do it -- and down the course we went.

At the other end, we climbed out of the vehicles; everyone went to do their next assignment and from the time that the male winner cross the finish line at roughly 12:15 p.m. until the time that we closed down the Family Reunion at 6:30 at night and started to tear down, 411 hams worked with the other 12,000 volunteers to make this the smoothest, best marathon ever."

--

The Alan that Steve referred to is Race Director Alan Steinfeld, W-2-T-N.  They were but two of the 400 plus Amateur Radio volunteers who came out this year. And Mendelsohn says that the hams were kept very busy, especially in assisting in medical communications as runners fell by the wayside:

--

Mendelsohn:  "We had people went down virtually everywhere on the course. The hams were there with the doctors to help and provided a great deal of medical communications back to the Family Reunion area.  This allowed the families to know that a runner had dropped out:  That they may have been taken to a hospital or that they were simply going home."

--

Mendelsohn says that between 800 to  900 pieces of health and welfare traffic was passed between 10:07 a.m. and 4:40 p.m.  He also says that 2003 was the years of APRS at the New York City Marathon.  Ill have that part of the story next week.

With part of the course of the New York City Marathon in sight, I’m Henry Feinberg, K2SSQ, reporting for the Amateur Radio Newsline.

--

As for the race results.  Kenya’s Martin Lel, running his first ever marathon won the Mens division. He timed in 2:10:30 beating out defending champion Rodgers Rop.  Meantime  Margaret Okayo smashed the course record.  She won the race for the second time after crossing the line in 2 hours, 22 minutes, 31 seconds, shattering her own record by almost two minutes.

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm).  Our e-mail address is newsline @arnewsline.org.  More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org.  You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I’m Jim Damron, N6TMW, and I’m Jeff Clark, K8JAC, saying 73 and we thank you for listening. Amateur Radio Newsline(tm) is Copyright  2003.  All rights reserved.

I've received radioshow on .cag format (recorded on OnAir/soundmanager)
Are there any tools for converting it to wav or aif?
Can I burn a CD of it?

Continental Electronics Has a New Owner
Broadcast transmitter manufacturer Continental Electronics has a new owner.

Few people in the broadcast industry took note this week when it happened, but the Dallas-based company was part of the $543 million purchase of Integrated Defense Technologies Inc. by defense electronics supplier DRS Technologies Inc., headquartered in Parsippany, N.J.

The transaction was completed following approval by a majority of IDT stockholders, the buyer said.

A Continental spokesman told Radio World Online Thursday that the impact of the sale on Continental is not yet known; but, he said, "I think it can only be positive." Continental has 140 employees.

The company has had a varied ownership history. Continental was founded in 1946 by James O. Weldon and later became part of LTV Corp. In 1972, Weldon bought it back.

In 1985, the company became a division of Varian Associates; in 1990, it was acquired by Tech-Sym Corp., which was bought in turn by IDT in 2000.

DRS, the new parent company, employs 5,700 people. Its announcement of the acquisition of IDT did not mention Continental. A spokeswoman did not immediately return a call about the company's plans for the broadcast marketplace.

Mark S. Newman, DRS Technologies' chairman, president and CEO, said in a statement, "This transaction has enhanced our content on key U.S. Army and Navy weapons programs, contributed a significant new base of U.S. Air Force programs and greatly expanded DRS's intelligence agency business, creating a formidable, defense electronics industry competitor."

WCBN WILL DESTROY YOUR FEEBLE FORMATS

WCBN - 30 Years of Freeing Your Mind - Listen to us online!

WCBN is the University of Michigan student-run community freeform radio station in Ann Arbor, Michigan. We broadcast at 200 watts to the University and its surrounding communities from the basement of the Student Activities Building in downtown treetown.  We have been broadcasting a genre-less overview of music, news, and public affairs for 30 years.

WCBN's musical format is freeform, with some specialty shows. Freeform involves all different kinds of music, including jazz, reggae, blues, hip-hop, country, rock, and just about everything else under the sun. Instead of telling our DJs what to play, we allow them to select their own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an intelligent fashion, and show links between musical genres.

Click here to listen to our live WCBN-FM Ann Arbor broadcast!

I hope the company isn't using that name, since there is a
telecommunications company officially named IDT in Newark, NJ. I
worked for them for a while. They love to litigate.

Rich

   Are you sure you want a silver plating? Tin is the common plating,
and it does have a silver color. Silver will oxidize quicker, and will
dissolve into the solder, and can cause electromigration problems, and
weak joints.

For sale:

(The "Radio Crazy", it's back!)

Partial ownership in 1 KW fulltime AM in S. Oregon.
Oldest AM in county. On air over 60 years. Only
$100,000 full price without real estate. $900,000 with
very VALUABLE real estate. (Optional).

Joint venture. Active/inactive investors with at least
$10,000 each (ten grand)are welcome. No individual may
own more that 49 percent. That applies to me too!
("Anti-bully" legislation, hi!)

This station grossed over $227,000 in 2002. (Unaudited
financials).

I am not a crook nor am I a broker, agent, shill,
owner or part owner.

No "AM bashers" or other "negative nabobs" please.

If you have some sick twisted idea that I am a
criminal because I want to put together a legit.
business situation, please do your flaming elsewhere.

The "Radio Crazy" may be crazy but he is not a crook!
Hi!

Tel: (478)741-1710 in Macon, GA or email.

73,

Meyer Gottesman, W6GIV
aka "The Radio Crazy"

aka Moron Gottesman

Doesn't Continental trace their history back to Collins Radio of Cedar
Rapids. Iowa?

WCBN WILL DESTROY YOUR FEEBLE FORMATS

WCBN - 30 Years of Freeing Your Mind - Listen to us online!

WCBN is the University of Michigan student-run community freeform radio station in Ann Arbor, Michigan. We broadcast at 200 watts to the University and its surrounding communities from the basement of the Student Activities Building in downtown treetown. We have been broadcasting a genre-less overview of music, news, and public affairs for 30 years.

WCBN's musical format is freeform, with some specialty shows. Freeform involves all different kinds of music, including jazz, reggae, blues, hip-hop, country, rock, and just about everything else under the sun. Instead of telling our DJs what to play, we allow them to select their own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an intelligent fashion, and show links between musical genres.

Click here to listen to our live WCBN-FM Ann Arbor broadcast!

I believe that the Collins broadcast transmitter line was a relatively recent acquisition, early on the acquired Western Electric's AM transmitter business, which I think set the tone for their future transmitter business. The Western Electric divestiture is interesting, I don't know that anyone picked up the FM line, probably because FM was going down the tubes at the time? A company whose name I don't remember seems to have picked up the Western Electric Television transmitter line, which may never have been sold under the Western Electric name. Anyone have more info on this?

Regards,

John Byrns

The Western Electric divestiture is interesting, I don't know that anyone picked up the FM line, probably because FM was going down the tubes at the time?  A company whose name I don't remember seems to have picked up the Western Electric Television transmitter line, which may never have been sold under the Western Electric name.  Anyone have more info on this?
>>

SEL got WECo's VHF TV transmitter line.

The merger of the Collins line into CE was done many decades after the creation of CE from the spin-off of WECo's AM line.

CE also made UHF TV transmitters in the 1950s. Whether any of these were WECo inspired, I can't say. They sure resembled WECo boxes, however.

WECo's non-telco assets were spread all over the place.

Litton Industries, my former employer, bought the Westrex Corporation assets from WECo, and these assets included all film production equipment, and all disk recording equipment ... IOW any equipment which handled "principal recording elements".

Litton also got the Westrex trademark, and began to market this equipment under the Li/Westrex name, with Westrex Corp itself being a subsidiary of a supsidiary of Litton Industries, Inc.

You can buy a chemical compound from www.partsexpress.com that you just mix up and put your board into for tin plating. You don`t want silver plating as the other fellow told you as it would tarnish. Rob

For sale:

Partial ownership in 1 KW fulltime AM in S. Oregon.

Joint venture. Active/inactive investors with at least $10,000 each are welcome. Full asking price is $100,000 WITHOUT real estate. Land is optional at $800,000 more.

Station is on the air for over 60 years. Oldest station in the county.

It grossed over $227,000 in 2002.

All investors would be on the board with full voting rights if desired.

I am not a crook! HI! I am also NOT an agent, shill, broker, owner or part owner!

Tel: (478)741-1710 or email.

73,

Meyer Gottesman, W6GIV
aka "The Radio Crazy"
aka Moron Gottesman
aka Maven Gottesman

Resume and tel. of parole officer on request. HI!

This one is driving me nuts. I had a decent JVC Car stereo. When it starts getting cold here the reception of most AM stations gets horrible - a high pitched whine accompanies most signals. Thinking the JVC was at fault, I purchased a top of the line Pioneer unit. SAME PROBLEM! It gets weirder. If I take a portable radio into my car, with the car running, and the Pioneer turned off, no problem with the signal on the portable. As soon as I turn on the Pioneer, the portable makes the same high pitched whine!

To recap:
-No problems in the summer, only when it is cold outside!
-Taking a portable radio into the running car does not exhibit the problem, so I don't believe that there is interference from the car.
-Turning on the car radio causes the exact same interference on a portable radio in the car.
-I have tried 2 different brands and both had the problem.

Any help or ideas would be greatly appreciated.

For sale:

Partial ownership of 1 KW fulltime AM in S. Oregon.
City of about 20,000 with county population of about
100,000. On the air over 60 years.

Joint venture. (If you venture, you go to the joint!
HI!)

Active or inactive investors with at least $10,000
each are welcome. All investors would be on the board
with full voting rights if desired. No individual may
own over 49 percent, that includes me!

The station grossed over $227,000 in 2002. NOT profitable at this time. You heard it first here, kiddies! (I am not a crook!) I am not a broker, shill, agent, owner or part owner. Okay? (Angry snarl!)

No "AM bashers" or other negative nabobs. Do your flaming elsewhere. I have heard it all!

They are asking $100,000 for the station WITHOUT real estate and (optional) $900,000 WITH the real estate.

Those who ID themselves fully will gladly be given the call letters and city of license.

Tel: (478)741-1710 in Macon, GA.

73,

Meyer Gottesman, W6GIV
aka "The Radio Crazy"
aka Moron Gottesman
aka Maven Gottesman

Hello
I have an aircheck I'd love to share but I am afraid nobody will touch it. Granted I'm not a political correctness freak but I don't want to submit something that will be rejected.

It is from WNKS-FM 102.9 in 1987 or so. It has Bear O'Brian, Marcia Shipley (black news personality), "Dr Dave" and a character known as "Willie Lee McGee". Willie Lee is a black man, done likely by a white staffer. He lives in a dumpster and has severe alcoholism. The tape details his life story.

This reprise of Amos N' Andy may be shot down despite it being representative of Eighties radio content and containing music.

Should I waste my time?
Thanks
Ken

Hello
I am getting the feeling that Sirius et al will have dull announcers like
the satellite radio station.  Is this true?

Also I hear complaints the Drake style announcers lacked personality.
Granted they weren't like WABC but they weren't just readers of liners. They
were quite enjoyable compared to the crud we have now.

One more note; if I go on a weekend shift at a low watt radio station, posts
on here say they want writers of comic material.  Do you think this is a
good idea for beginners? If you convey a sense of having fun and crack a few
jokes isn't that good enough?

I did demo tapes fifteen years back and attempted to be funny. They stunk.
Of course my voice was no help (it helps little being Southern and having R
and T pose difficulty to the tongue).
Thanks
Ken

I'm wondering if the heater is interacting with the car radio and a
portable is probably far enough away from the source of the "noise"
that it can't pick up the noise...just radio signals.

Is there any accessory connected to the Radio like audio amplifier,
reception amplifier etc. which your turn on with the radio?

>Should I waste my time?

No. It isn't a reprise of Amos and Andy. Even though the show was done by white personalities, the characters were portrayed as good natured ordinary people. The characters, as I envisioned them, were the black versions of Ralph Kramden and Ed Norton. Always looking for a quick buck in get rich quick schemes.

There isn't much that's funny about a white personality playing a seriouusly dysfunctional black character. If you know anything about either homelessness or alcoholism you'll have a very hard time pulling much humor out of them. Both conditions are horrible.

Greetings From Cosmic Connection,

I am the host of Cosmic Connection. A Ufo Television Series. Since 1993 we have covered the ufo phenomenon with interviews from Betty Hill to Stanton T. Friedman and on subject topics ranging from Roswell, Area 51, Alien Abductions, & Crop Circle formations. On Cosmic Connection we discuss the latest in World sightings and local coverage. We share the film of our audience that send us their video recorded events and tales of their past experiences. I am inviting you to join our program every Monday night at 10 PM CH # 16 SNCAT Reno, Nevada. So you may catch up on some of our past series programs. If you would like updated information on Cosmic Connection please write to Cosmo at ufotvshow@hotmail.com If you know of a friend that may enjoy our programming please pass this letter on.

Thank You

Missing Fisherman of October, 1989
After dwelling on this case for 13 years, I still find it very puzzling. Fishermen are a unique bunch with the ocean being front and foremost in their lives. They have their superstitions about the ocean, combined with a great deal of knowledge and respect.
Oscar Schultz, 70 years old with 30 years of experience as a commercial fisherman, left his home in Port of Charleston on Oct. 9, 1989 at 6am for a 1 day fishing trip alone. Fred Buck, 57 years old with 10 years of experience as a commercial fisherman, left his home

in Port at Yaquina Bay on Oct. 10, 1989 for a 1 to 2 day fishing trip. Both men were known to go out alone, and with the slow fishing season that year, lone fishing was a common occurrence for most, as they couldn't afford to pay help with the small catches.

The weather was mild all that week, and the ocean was calm. Accidents do happen on fishing boats. Being washed overboard by sneaker waves, or from slipping on a wet deck, are risks all to familiar for those in the business.

We know that Oscar Schultz had a heart attack in 1983, but hadn't had any problem since. Oscars 28ft troller, the Gloria L, was found 40 miles off the mouth of the Umpqua River with the engine running on Oct 12th. Oscar was nowhere to be found.

Fred Buck's 38ft troller, the Acie-O, was found 50 miles off Winchester Bay. The engine running, in gear, going in circles, and like Oscar, Fred was nowhere to be found.

The boats were 20 miles apart in a straight line.

The Coast Guards scenario was that Oscar may have had a heart attack and fell overboard, and Fred happened to come onto his body floating in the ocean and tried to retrieve his body, and he in turn fell overboard and could not get back on his boat.

This puzzles me in that an experienced fisherman would never leave his boat in gear and try to retrieve anything from the ocean. I think this is very unlikely. Would he not have reported to the Coast Guard or other authorities that he had found a body floating in the ocean?

Fred's cooking stove was also left on as if he was ready to make himself some dinner and something had interrupted his meal.

Both men were missing from their boats, with the boat engines running and one boat in gear.

Newport Marine Surveyor Tom Curry was quoted in the Oregonian. "I don't think a wave could have swept either man overboard, because the ocean had been relatively calm all week". Brent Hamstreet in a Northwest magazine article said."People saw flashing lights over the ocean all week", and Bruce Pimental of the Coast Guard Station in Seattle said in a Statement to the Oregonian "I don't know if Intelligence people are looking into it or people interested in celestial visitor's are thinking about it. I'm sure somebody is asking the question. Why and how come?""

Now this is a very interesting quote from a spokesman of the Coast Guard to have made on record. Why would he have made such a quote if he was convinced of the Coast Guards earlier scenario?

Investigation from the Coast Guard and local Officials found no foul play with their investigations. 2500 square miles of ocean had been searched looking for the boats and fisherman. Neither body was found, they just vanished.

12 days before Oscar's departure from his port there had been a major sighting in Tillamook. Approximately 50 people, some of whom were law enforcement and the local newspaper owner. The sighting had been observed along the Oregon and Washington coast. On Nov. 29th 2 hunters reported an additional sighting of a large white object in the Tillamook area. So we had UFO activity from Sept. 28th through Nov. 29th, putting the fisherman right in the middle of this activity.

This mystery has intrigued me for 13 years. I am not aware of anyone else looking into this mystery. Oscar is not related to me so that is

not a factor in my interest. But there are just too many circumstances relating to this case that don't make sense to me. The statement by Bruce Pimental of the Coast Guard comes to mind every time I think about this case.
Did Oscar and Fred fall overboard? Or did celestial visitors have a hand in their disappearances? Perhaps we will never know.

>>
Curious to see what kind of a warped nighttime pattern it will have.  Consider everything it will have to protect: co-channels in Boise, Chicago, Simi Valley, and possibly Commerce City.  First-adjacents in Window Rock and San Francisco.
>>

1) Only Class A first-adjacents get any protection, and that is KNBR/680 ... KTNN/660 get NO protection from a first-adjacent as it is a station of the same class,

2) Obviously, ex-WMAQ will get co-channel protection, as it is an ex-Class I-A, but so also will the ex-Class I-N in Alaska, which KBOI has always protected,

3)  Simi (KIRN) is close enough to require protection as that station is the same class,

4) however ... the protection required to be given to the ex-Class I-N in Alaska will implicitly protect KIRN and KBOI, the latter which has already redesigned its night pattern (paid for by KIRN's owner, Lotus, BTW) so there is no protectable radiation towards the NE, E, SE, S and SW.

Therefore, this new station is only required to protect the two Class As ... the ex-Class I-A in Chicago, and the ex-Class I-N in Alaska.

And, any other protection to stations of equal class will implicitly be provided by the protection afforded to the Class As.

(There are no stations of lesser class).

Bottom line ... the night pattern will be a simple, symmetrical pattern, provided by four in-line towers.

(The required day pattern is somewhat more complicated as the day power is nearly fifteen times higher than the night power).

This week on Kweevak Radio: Don't miss our special Halloween show on Thursday October 30, 2003 from 8 p.m. to 11 p.m. on RocklandWorldRadio.com. We will have special guests including Tony Amato from Asbury Park, New Jersey talking about his band "Boccigalupe and the Badboys" and their many latest achievements. Also, in the studio we'll have "The Joe Mystery Group" spinning songs from their new record 'Classic Rock Songs for The New Millennium' and we will be talking about UFOs, ghosts and other bizarre anomalies with noted UFOologist, Emilio Reeves. Finally, we will have plenty of music-related prizes to give away during the show including CDs, books & t-shirts - so please tune in!

The Kweevak.com "Top-10" Countdown for this week features the following bands and artists who have been chosen by the viewers of the Kweevak.com Music Promotion web site and listeners of the Kweevak.com Radio programs:

10. Charlie Souza
9. Bobby Fuller Drive
8. The Second Self
7. Fallen From Grace
6. Shelley Dael Walker
5. Ten Ton Chicken
4. Beth Thornley
3. 40 Ft. Ringo
2. Glass Harp
1. Bobby Fuller Drive

Listeners can vote for artists who are currently in the "heavy rotation" list on the Kweevak.com Radio Show which airs live on the Internet every Thursday night from 8 p.m. to 11 p.m. (EST). The Kweevak.com "Top-10" Countdown airs live every Monday at 11:00 a.m. (EST) and is re-broadcast five nights a week, Monday through Friday, at 7 p.m. (EST). Both shows are aired exclusively on RocklandWorldRadio.com.

Details on how to vote for the weekly "Top-10" countdown, how to submit your music to the show, and information on affordable sponsorship packages is available at the Kweevak.com Radio Show page at:
http://www.kweevak.com/rd_radio_show.htm

Please don't forget to tune in to all of our programming and please spread the word about the Kweevak.com Music Promotion web site!

SPONSORS: Special thanks go to this week's sponsors Charlie Souza (http://www.charliesouza.com) and Ray Ecke Songwriting for helping support the Kweevak Radio Show webcasts!

MORE NEWS FROM THE RADIO SHOW:
- More details about the "Top-10" & upcoming show is on the radio show page at:

That doesn't sound very promising. I think I would have used "implement." it has a better connotation than executing.

```

Greatings,

I want a way to put multiple FM tuners to a PC, and get audio from several radio stations at the same time using windows media encoder, but I don't wanna have several sound cards, instead i'm looking for a USB or pci card fm tuner wich can input audio into the pc without a sound card.

Thanks in advance,

Jose Suero

FREE VOICE ACTING WORKSHOP AT NEW YORK'S DRAMA BOOK SHOP
Monday, November 3rd - 6:00 P.M.

JOE BEVILACQUA TO TEACH WHAT HE LEARNED FROM THE VOICE OF YOGI BEAR AND SIGN COPIES OF THE NEW BOOK: SCENES FOR ACTORS AND VOICES

As part of THE SIMON STUDIO'S 25th Anniversary Celebration, join studio member Joe Bevilacqua (veteran NPR Producer/ Writer/Actor) in a workshop/demonstration from his new book  Scenes For Actors and Voices. The evening will include audience participation and a book signing. A reception follows.

The voice acting workshop will be held Monday, November 3rd, from 6:00 to 8:00 P.M., at the Drama Book Shop, 250 West 40th at 7th Ave., NYC.

Scenes For Actors and Voices is a compilation of original scripts by Daws Butler, who spoke the words for most of the classic Hanna-Barbera characters:  Yogi Bear, Huckleberry Hound, Quick Draw McGraw, Elroy Jetson, and a hundred others.  His significant work both as a writer and actor with Stan Freberg in the 1950s on "The Stan Freberg Show" and multi-million-selling records such as St. George and the Dragonet are still held in reverence today.

Edited by radio historian and author Ben Ohmart and veteran public radio producer Joe Bevilacqua, "Scenes For Actors and Voices" is comprised of rare never-before published material from a man known as some of animation's most beloved cartoon voices but who was also a prolific writer.

"Most people are unaware of this," laments Bevilacqua, who studied voice acting with Butler for 13 years, as part of Butler's Beverly Hills, California workshop.  "Daws co-wrote the Dragonet spoofs and many other of Freberg's most successful records.  He wrote for 'Time for Beany,' Bob Clampett's TV puppet feast which ran live five days a week for five years. And he wrote and voiced some of TV's funniest animated commercials." In 1975, Daws Butler began an acting workshop from his audio studio/converted garage and soon after wrote hundreds of scenes for his students to perform.Among Butler's many successful students were Nancy Cartwright (the voice of Bart Simpson and author of the L.A. Times best seller, My Life as a 10-Year-Old Boy), and Corey Burton (Disney's Atlantis; Captain Hook in Return to Neverland; Brainiac in the Superman/Justice League cartoons; the Old Navy 'logo voice'). Burton also wrote the book's insightful foreword.

Nancy Cartwright says the book is "a romp in a garden of characters. Each monologue, dialogue or scene study is a taste of some of the 'juicy fruits' that Daws left as his legacy. They fed me. They fed Corey Burton. They fed Joe Bevilacqua. And they fed dozens of other voice talent in Hollywood and beyond."

"More than a voice actor, Daws was an artist," explains Bevilacqua. "To him, playing a talking dog or bear was as real as playing Hamlet or Mac Beth. The techniques he taught are all represented in these scenes, which are not cartoony but realistic examples of human interaction."

Corey Burton adds, "His writing was purposely difficult to get a 'handle' on; carefully crafted to be open to a nearly infinite range of interpretation. A genuine exercise which actors must first struggle to decode, then apply great depth of imagination and creativity in a complex exploration of character and emotion, through a virtual rainbow of possibilities."

The book was a longtime dream of Butler, who died in 1988. With the cooperation of Butler's widow, Ohmart and Bevilacqua chose the best monologues, dialogues and exercises from hundreds of scripts found in file cabinets in the Butler family garage. They wrote introductions for each filled with the advice Butler gave his students during a typical workshop. The result is a scene book for anyone interested in improving how they use their voice. But actors, in particular, will find it as useful as a painter would find a life drawing class.

"Plus, it's a very entertaining read. 'Better than the average scene book,' as Yogi would say," concludes Bevilacqua.

Scenes For Actors and Voices focuses on one, two and three character scenes short enough for use in any acting class or audition. Future Daws Butler scene books are planned, and Ohmart and Bevilacqua are currently working on the authorized biography of the voice legend for publication Christmas 2004.

Scenes For Actors and Voices by Daws Butler
Release date: July 14, 2003.

Okay this is a longshot...

But I'm looking for any kind of recording (pref mp3) of "the greatest jingle of all-time" for Welders Supply in Dallas.  Performed by the same fellow who did "Hey Mr. Greenfields"...

Picture a warehouse loaded
With torches, specials and parts
Picture several locations
And well-trained people with hearts
Remember Welders
When time is short
We've got the people
We've got the parts
We've got the know-how
To serve you right now
Call us at Welders Supply

BS

I was thinking that too.  In fact I had tried "implement" and then deleted
in favor of "execute."

I've always thought "implement" is to put in place.  "execute" is to carry
out.

I think in reading the comments to date on this subject, it's quite apparent that it's all in the mind (or ears?) or the beholder. To my ears (which have admittedly been assaulted by over 35 years of shortwave listening), the audio quality and signal reliability of each service is quite similar. The decision for me to go with Sirius rested on the non-commercial and proprietary nature of their music channels and the presence of more public radio options (ie: BBC, WRN, two NPR, one PRI and C-SPAN) including access to more international broadcasters (BBC and WRN). The $3 differential in monthly charges was no factor and in my judgement the allocation of channels to differing aspects of the musical spectrum was a wash between the two.

Quite frankly, I think--especially in light of the terrible state of AM and FM radio--a listener would be pleased regardless of which service were chosen. But, as they say, your mileage may vary.

John
Figliozzi

Thanks for the thoughts, Eric - I did as you suggest, there was no
difference. As noted, if I switch to grid power the interference is gone.
However the solar array is still sending a charge to the controller at this
point, so if it was simply RF noise from something in the 'solar chain' the
noise should persist even when plugged into the grid. I'm suspecting
something about the link between the inverter and the radio power supply.
The radio is an ancient Sony from 1975. Yes, it is time I replaced the
radio...

Not necessarily. The current flowing from solar cell to controller is likely to be nearly zero when not feeding the radio. You won't be interrupting much current in that case, and would generate little if any noise.

> I'm suspecting
> something about the link between the inverter and the radio power supply.

Have you done any common-mode filtering of the leads from the inverter and the radio? I have an inverter - claimed to be very radio-quiet - that makes a mess of the FM band. I never bothered to try filtering since I seldom use the setup. It was powering a laptop computer, but once the battery charged, I could run for 2 or 3 hours without the inverter.

> The radio is an ancient Sony from 1975. Yes, it is time I replaced the

Why? I don't see that as being part of your problem.

Thank you. You're one of the few people who lives in a world of color and shades of grey. Neither service is absolutely better than the other. I'd love to have a receiver that received both.

What we're forgetting is the incredible accomplishments of the people who created these services. I'm very fortunate in knowing many of them as friends. Just the fact that they were able to design, fund and construct them is a testiment to their willingness to go very far out on a limb and take risks.

My hat is off to them and I'm very happy to call them friends. Many of the shows I've been involved with are now on one or both services. I hope they both succeed. They deserve it.

Rich

This is a great tip! I was primarily interested in talk/news, not music. I
love radio, and I want to get away from right-wing talk on AM. Still, it
doesn't sound like there are very many talk/news stations on Sirius. Do you
(or anyone) have any idea what kind of satellite service would bring me all
those international broadcasters that I seem to remember claim satellite
```

presence? Or, what about more NPR stations? How can I get those (other than on my computer, which is too old for that)?

In article <bnmj4j$ppq$1@xuxa.iecc.com>, "John A. Figliozzi"
<jfiglio1@nycap.rr.com> wrote:

> I think in reading the comments to date on this subject, it's quite apparent that it's all in the mind (or ears?) or the beholder.  To my ears (which have admittedly been assaulted by over 35 years of shortwave listening), the audio quality and signal reliability of each service is quite similar.  The decision for me to go with Sirius rested on the non-commercial and proprietary nature of their music channels and the presence of more public radio options (ie: BBC, WRN, two NPR, one PRI and C-SPAN) including access to more international broadcasters (BBC and WRN). The $3 differential in monthly charges was no factor and in my judgement the allocation of channels to differing aspects of the musical spectrum was a wash between the two.

For sale:

Partial interest in AM radio station. The "Radio Crazy", it's back!!!

Joint venture. Active or inactive investors welcome with at least $10,000 each. No individual may hold over 49 percent. This applies to me too. All investors would be on the board with full voting rights if desired.

Total asking price is only $90,000 and real estate is included.

Station is in Georgia. 1 KW days and less than 50 watts at night but sufficient to cover city of license. City is about 4800 population. This is the only AM in that county.

Tel: (478)741-1710 in Macon, GA. I am NOT a broker, shill, owner, part owner or agent. I am NOT a crook!

73,

Meyer Gottesman aka "The Radio Crazy" aka W6GIV

Hello my name is Daddy G I host and Produce an Oldies Show from Lebanon Oregon. I am looking for very rare and unusual oldies for my show.. I am looking for "The Sully Gully" by Ed Sullivan;Music by artists who should never sing or by people whom you NEVER thought of recording. I am looking for copies for all"Golden Throats by Rhino". I need music contributors to expand my show..You may e mail me and if you think you have something I need..E mail me and I will tell you how to send it by CD or Cassette... I take all versions MONO or Stereo and so on...so I challenge you If you have it..let me know...

My email is daddygradio@yahoo.com or my website
http://members.tripod.com/~K32SGTV/daddyg.html
or search on google under
gerald gaule
daddy g oldies
daddy g radio
or copy and paste website address on google site

Peace,Love and Rock and Roll,
Daddy G aka Gerald Gaule

WorldSpace satellite radio has more international broadcaster channels, but it does not cover the USA and could probably never get a license to do so. Oddly, WorldSpace is headquartered in Washington, DC, and at least some of their roughly 10 proprietary music channels originate from Washington. They have a web site.

Most of WorldSpace is free to the listener.

I recently read that they are in the process of establishing at least a few subscription channels aimed at US & British expatriates scattered around their coverage areas in Africa and Asia.

I see your point. I will try to relate the noise to the state of charge of
the battery. I would think that if the state of charge is low then the array
will be firing all kinds of current at the battery through the controller
even if the radio is not trying to draw it down.

I will investigate this as well, thanks.

I've seen mention of Worldspace before. I saw a couple of receivers for it
on eBay. I live in Louisiana.
Do you think there's any chance I might be in the edge of its (possible)
South American coverage?

For sale:

Partial interest in fulltime 1 KW AM radio station in
Oregon. City of about 20,000 population. Asking price
is only $100,000 and NO real estate is included. Real
estate is $800,000 extra and optional.

Joint venture. Active or inactive investors with at
least $10,000 each are welcome. No individual can hold
over 49 percent. That includes me! All investors would
be on the board with full voting rights if desired.

The "Radio Crazy", it is back!! Oy vey!

Please, no "AM bashers" or other negative nabobs!

Curse of the day follows: May the good Lord curse and
darken the transmitters of CUm-with-us, Queer CHannel
and Site-of-hell groups!!!! Greedy groups, you know
who you are!

73,

Meyer Gottesman, W6GIV
aka "The Radio Crazy"
aka Moron Gottesman

For anyone interested, here's a reminder of upcoming DX tests; if
anyone
has any additions or corrections, please contact me. (BE SURE TO NOTE
THE TIME OF THE TEST; THEY ARE IN THE LOCAL TIME OF THE STATION)

Saturday, November 1, 2003 - WJNT-1180, Pearl, MS 12:00 am-1:00 am CST
(1-2am EST).
E-Mail: slcarter@wjnt.com
WWW: http://www.wjnt.com

Please remember, what's listed as being on, say, Monday *may* be what
you
think of as Sunday night!

If you try for (or hear) any of these tests, PLEASE post a message
letting
me know, and please, drop the station personnel a note, via e-mail or
snail
mail, thanking them for running the test! Also, for brevity's sake, I
didn't post the QSL addresses; if you need these, let me know!

Lynn.

Dear all,

at 09:00 PM MEST there will be a Mike Oldfield Special on the 24 hours live radio station Radio Mi Amigo.

There homepage is http://www.radio-miamigo.com
You can listen live on http://dein-Radio.com:6700/listen.pls with e.g. Winamp.
They are broadcasting 24 hours a day live in mp3pro. You can listen without an mp3pro decoder but the music quality is much better (FM-Quality) with the plugin.

Best regards,

Guido

P.S.: on their homepage you will also find a chat ... here you can ask for your favorite songs to be played within minutes ;-)

"RL" is an arcane DXers' abbreviation for "religious." Of course, there are about 700 AM DXers left in the whole country, so it is normal that no one else understand their abbreviations.

For sale:

The biggest boatanchor of them all! An AM radio station in Oregon. Fulltime, 1 KW. Non-directional.

JOINT VENTURE! (If you venture, you go to the joint! HI!)

Active or inactive investors with at least $10,000 each are welcome. No individual can own more than 49 percent including me.

The asking price WITHOUT real estate (must move in 3 years!)is $100,000. WITH real estate, the asking price is $900,000. Very valuable land right in the heart of the city.

City of over 20,000 with county population being over 100,000. Station is on the air over 60 years.

The station grossed over $262,000 in 1999 and over $230,000 in 2000. I do not have the figures for 2001 and 2002, sorry. All are UNAUDITED.

Now the morning invocation: May the good Lord curse and darken the transmitters for "Queer Channel", "Sit-in-Hell", "Cum-on-Us" and "Measley". You know who you really are. (Frown!)

Please, no "AM bashers" or other negative nabobs.

Tel: (478)741-1710 in Macon, GA

73,

Meyer Gottesman, W6GIV
aka "The Radio Crazy"

Bicyclists take on radio empire

three stations made on-air comments they say encouraged drivers to throw bottles at bike riders or hit them with open car doors

Bicyclists take on radio empire

CLEVELAND, Ohio (AP) --Bicyclists are demanding that the nation's largest radio group be punished because disc jockeys at three stations made on-air comments they say encouraged drivers to throw bottles at bike riders or hit them with open car doors.

They say the morning show hosts at Clear Channel Communications stations in Cleveland, Houston and Raleigh, North Carolina, also suggested motorists blast horns at cyclists, and speed past them and slam on their brakes in front of them.

"DJs encouraging the masses to hurt people in any form is insipid, and should not go unpunished," said Edwin D. Reeves, 30, a cyclist and ceramic engineer in St. Louis.

Clear Channel, based in San Antonio, owns roughly 1,200 radio stations in the United States.

The company won't release transcripts or tapes of the broadcasts, but the three stations apologized on the air and Clear Channel donated $10,000 and air time to promote bicycle safety.

"We deeply regret that comments made by on-air personalities were misinterpreted. Clear Channel does not condone violence in any form and we are committed to working with the cycling community to improve cycling safety," chief executive John Hogan said in a statement.

Clear Channel, which said it was coincidental that similar comments came from three stations, said it told the stations to refer questions to corporate headquarters. It wouldn't say if the disc jockeys were disciplined.

The comments started June 30 on WMJI in Cleveland when one of the morning show personalities complained that a group of bicyclists had held him up in traffic near his home.

"The other guys started chiming in," said listener Don Barnett, service manager at Century Cycles in Medina. "Then it escalated. People started calling in."

Similar remarks came weeks later on WDCG-FM in Raleigh and KLOL-FM in Houston.

Lois Cowan, 42, who owns the Century Cycles shops in the Cleveland area, filed a complaint with the Federal Communications Commission asking it to fine the company or take away the licenses of the three stations.

"They shouldn't be advocating things that kill people," Cowan said.

She says she's received more than 5,000 e-mails from cyclists about the issue.

Dorothy Nance of Raleigh said she and her husband sold their Clear Channel stock after she heard the bicycle comments on WDCG on September 22.

Nance said the announcers were "egging listeners on, by encouraging harm to cyclists." Suggestions included throwing soft drink bottles, she said.

Thomas F. Valone, owner of seven outdoor clothing and equipment stores in North Carolina, pulled "a few thousand dollars" worth of advertising from the Raleigh station because of the comments.

FCC lawyers refuse to comment on specific complaints.

"We got a complaint about that and we are acting on that," FCC Chairman Michael K. Powell told the cyclists.

# Amateur Radio Newsline™ Report 1368 – October 31 2003

------------------------------------------------------------------------------
-----------------------------------------------

## A NOTE TO THOSE WHO ONLY “READ” AMATEUR RADIO NEWSLINE(tm)

For those of you who only know of the Amateur Radio Newsline (tm) as a text newsletter we would like to invite you to listen to the audio version. This Amateur Radio Newsline (tm) script is actually written for the “spoken word.” It is recorded each by professional broadcasters and is available for private listening or rebroadcast over your repeater. Two methods of delivery are available: FTP MP3 or dial-in telephone. Please visit our website at http://www.arnewsline.org for a list of telephone numbers (you have to pay your own long distance charges) and links to our voice newscast. Free FTP Downloads are available at our website by clicking on the newscast number at the top of the page.

de
The Newsline Production Team

------------------------------------------------------------------------------
-----------------------------------------------

Amateur Radio Newsline report number 1368 with a release date of Friday, October 31st 2003 to follow in 5-4-3-2-1.

The following is a Q-S-T. Ham radio comes to the rescue as southern California is swept by wildfires and a new Amateur Radio satellite will be launched early next year. Find out the details on Amateur Radio Newsline report number 1368 coming your way right now.

(Billboard Cart Here)

**

## RESCUE RADIO: HAM RADIO AND THE SOCAL FIRES

>From the Mexican border to the suburbs north of Los Angeles, large sections of the Southern California were under siege the past week. This, as ten major and several smaller wildfires blazed their way across the area.

Fanned by hot, dry Santa Ana winds gusting to 60 miles an hour, the wildfires dervored everything it their path. At least a eighteen people are dead and over 1500 homes and businesses have been destroyed. And as we go to air, well over 1 million acres have burned.

Gordon West, WB6NOA, has been at one of the busiest Red Cross evacuation centers for the past several days. He took time out to file this first hand report on how hams are aiding in fire relief efforts:

--
Audio report only. Hear it at www.arnewsline.org/quincy
--

As we go to air, ham radio operators continue their firefighting communications support efforts. More on their role in future Amateur Radio Newsline reports. (ARNewsline(tm))

**

RESCUE RADIO: KCOP REPORTS ON HAMS DOING FIRE DUTY

Los Angeles television station KCOP appears to be the only one so far to mention the role the role ham radio operators are playing in fighting the Southern California wildfires.

On Monday night October 27th, the stations 11 P.M. newscast showed video of a group of unidentified hams at their radios in the Los Angeles western suburb of Simi Valley. At the same time anchorman Rick Garcia read a brief synopsys of what the radio amateurs were doing. It explained how the hams could provide communications between the various relief agencies that could not speak directly with one another.

While short and simple, the report was well written, accurate and nicely done. KCOP is one of two Fox owned stations serving the Los Angeles area. (ARNewsline(tm))

**

RESCUE RADIO: CALIFORNIA WILDFIRES FROM SPACE

The wildfires that ravaged southern California were even impressive from space. Just before returning to Earth, NASA astronaut Ed Lu took photographs from 240 miles above the fires through the windows of the International Space Station. The photos taken on Sunday October 26th are on-line at www.spaceflight.nasa.gov/station. (NASA)

**

RADIO LAW: AUTHORITIES LOOKING FOR ALLEGED TOWER TERRORIST

Law enforcement authorities in northern California and southern Oregon are searching for a man seen tampering with electrical towers. This, as one official says that the incident smacks of being an act of domestic terrorism.

According to the CGC Communicator, the latest incident took place the week of October 20th just south of Redding California. It involved a heav-set man who used large wrenches to completely unbolt one leg of a four legged transmission tower.

Authorities say that he had half the bolts removed from a second leg when he was spotted and fled.  Witnesses chased the suspect onto Interstate 5, where he sped south into Tehama County and disappeared.  As we go to air he is still at large.

According to a news release from the Federal Bureau of Investigation, the suspect is similar in description to a man seen removing bolts at another tower near Klamath Falls, Oregon earlier in the day.  He is described as a white male, in his early 60's with long, blackish-gray hair and a salt-and-pepper beard.

More details on this story and the suspect are in cyberspace at: http://redding.com/top_stories/local/20031022toplo043.shtml  (CGC Communicator)

**

Break 1

>From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world and this week recognizing the support of the Quarter Century Wireless Association and its chapters world-wide.

(5 sec pause here)

**

HAM RADIO IN SPACE:  ECHO LAUNCH ANNOUNCED

Ham radio will soon have another new bird on orbit.  This as AMSAT-North America announced that launch of the AMSAT OSCAR-E will take place on March 31st.  Amateur Radio Newsline's Bruce Tennant, K6PZW, has more:

--

That's right.  Some really good news on the ham radio space front.  This, as word comes that the Echo ham radio microsat is now scheduled to launch on March 31, 2004.

Earlier plans had called for a May 2004 launch for the tiny bird.  Echo Project team member Richard Hambly, W2GPS, reported at AMSAT-North America's Annual Meeting that the project has made significant progress in recent months.  So much so that advancing the launch date was possible.

Echo is a fairly simple ham radio by todays standards.  It has two UHF transmitters.  Each one runs from 1 to 8 watts and the bird is capable of simultaneous operation.  Also on board are four VHF receivers and a multiband, multimode receiver capable of operation on the 10 meters, 2 meter, 70 cm and 23 cm bands.  This means all sorts of transmit and receive band combinations will be possible once the tiny ham-sat is in space.  This includes PSK31 on a

10-meter SSB uplink.

Hambly says that the project team powered up the Echo flight hardware in late summer at Space Quest. Data communications, command and control, and attitude control subsystems were tested. Also checked out were the radio equipment, power systems and cabling. It all checked out and that's good news for hams waiting for this latest addition to its family of birds in space.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, reporting.

--

A Russian rocket will carry the 10-inch-square satellite into a low-Earth orbit from the famed Baikonur Cosmodrome in Kazakhstan. (ANS)

**

## PROPAGATION: ANOTHER CME AT SUNSPOT 486

More solar activity affecting ham radio. This, as one of the most powerful solar flares ever recorded erupted on the Sun the morning of October 28th.

It happened near giant sunspot 486. That's the sunspot we reported on last week and this latest explosion hurled a coronal mass ejection or C-M-E directly toward Earth.

Based on the speed and recordings it was expected to to impact the Earth's Magnetosphere at about 1500 U-T-C on October 29th. When it hit, the shock alone wold produce a G 3 level geomagnetic activity. A level high enough to produce bright auroras at high latitude sites such as Scandinavia, Alaska, and Canada.

As hams are well aware, a solar storm can fully disrupt communications on some bands while creating unexpected propagation on others. What this one is doing is still developing as we go to air. More on this story as the reports come in. (ASWLC)

**

## DX DEBACLE: ANNABON ISLAND TEAM SPEAKS OUT

An update to the plight of the plight of the Dxpedition group forced to flea Annabon Island a few weeks ago. Jeramy Boot, G4NJH, is in Nottingham England with the rest of the story.

--

We reported two weeks ago that the 3C0V DXpedition to Annobon Island - off the west coast of Africa - had been forced to close down but at that time the reason for the enforced closure was not known. A press release has now been issued by the 3C0V team which says that all four operators - DJ9ZB, EA5YN, EA5FO and EA5BYP - are now back home safe and sound.

The press release says that each operator had proper individual licences and the group had written authorisation to import and operate amateur radio equipment on the island. However, on the 4th of October the military authorities there demanded that the group should dismantle the stations and leave for the Equatorial Guinea capital.  Two days later DJ9ZB and EA5FO were allowed to leave the country but the other two team members remained in the capital until the 10th, when they were eventually able to return to Spain.

Jeramy Boot, G4NJH.

--

The complete press release is in cyberspace at www.tabarca.es.mn Wew will have more DX news later on in this weeks program.  (GB2RS)

**

ENFORCEMENT:  FCC WRITES TWO CITIES ABOUT INTERFERENCE TO THEIR HAMS

The FCC has contacted officials in two cities about interference to their local ham radio operators.  The Agency's Daryl Duckworth, NN0W, explains:

--

Duckworth:  "The mayor of Lubbock Texas, along with copies to the Lubbock City Manager, the Lubbock City Attorney and Lubbock Power and Light have been sent a letter concerning interference to Brian Edwards, W5KFT.  This interference, possibly from equipment operated by Lubbock Power and Light, dates back to 1998.

Along similar lines, the mayor of Gouverneur, New York, has a follow-up letter concerning the lack of response to a previous FCC notification of RFI to Morton Howard, W2ATO.  The mayor has 15 days from receipt to reply.

This has been Daryl Duckworth, NN0W, reporting."

--

Both mayors were invited to contact FCC Special Counsel Riley Hollingsworth if they have any questions concerning these matters.  (FCC, RAIN)

**

ENFORCEMENT:  FCC RAIDS SAN FRANCISCO UNLICENSED STATION

The Federal Communications Commission has raided the San Francisco couple's home and shut down an unlicensed radio station.  The action removed Liberation Radio, a low-power alternative FM station that broadcasts political views and independent music programs from the airwaves.

The operation took place at the residence of Jim and Charlotte Hatch. The Hatch's had been told to take the station off the air before the raid.  Their first warning came in July, when FCC investigators showed up at the couple's home and asked to inspect the equipment.  They refused the FCC entry and were warned that they faced a potential $17,000 fine.

Instead, agents returned on Wednesday October 15th with a search warrant and more than a dozen federal marshals and confiscated  the stations’ broadcast equipment.  This included the transmitter, mixing console, computers, tape and CD players, turntables and even the rooftop antenna.

No charges have yet been filed against anyone associated with the station but further enforcement action is expected in this case.  (Published news reports)

**

ENFORCEMENT:  TEXAS FIRMS CITED FOR CB RADIO VIOLATIONS

The FCC has cited David P. Pace Jr of Nacogoches, Texas, for alleged violations of its rules dealing with the sale of 11 meter C-B gear.  According to ther agency, Pace, doing business as Pacetronics and Pace Marketing was offering for sale more than three dozen types of non certificated CB transceivers under the guise of them being ham radio transceivers.

According to the ARRL Letter, the FCC evaluated similar radios and found that the  devices at issue are not only amateur radios but can easily be altered for use as Citizens Band devices as well.  The regulatory agency says that dual use CB and amateur radio gear cannot be certificated under its rules.

The FCC also warned Pace that its rules requires certification for external RF power amplifiers or amplifier kits capable of operation between 24 and 35 MHz. The FCC asked Pace to submit a written statement describing actions taken to correct the apparent violations. The FCC's Dallas office issued the citation. (ARRL)

**

COMMUNICATIONS CRIMES: FLORIDA MAN CONVICTED OF VIOLATING DMCA

A Boca Raton Florida man has been convicted of selling hardware to illegally tap into DirecTV satellite broadcasts.  Following a four-day trial in federal court, a jury has found that Thomas Michael Whitehead  guilty of one count of conspiracy, two counts of selling devices designed to unlawfully decrypt satellite television programming and three counts of violating the Digital Millennium Copyright Act.

The Digital Millennium Copyright Act is a 1998 federal law that makes it illegal to make or sell any technology designed to get around copy protection measures such as the electronic cards used by DirecTV to give consumers access to its programming.  With his conviction, Whitehead becomes the first person to be found guilty by a jury under it. He faces a maximum sentence of 30 years in federal prison and up to up to $2.75 million in fines. (Published news reports)

**

BREAK 2

This is ham radio news for today’s radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

EMERGING TECHNOLOGY: GET READY FOR BOOK RFI

Remember those Radio Frequency I-D tags that are of such concern to ham radio? Well you will never guess where they are about to show up. Ken Butler, W1NNR, tells us:

--

The San Francisco Public Library's plans to track books by inserting an RFID tag to each one. These are the same radio tags that hams tried to get the FCC to not deplioy earlier this year.

Now, library officials in the Bay area say that they will install the RFID’s, into the roughly two million books, CDs and audio visual materials patrons can borrow. The system still needs funding and probably will not be ready for deployment until at least 2005.

--

So in a few years when you receive QRM to your ham radio operations, you might find that its coming from that novel you are reading late at night. (Science Today)

**

CONVENTIONS AND HAMFESTS: HAMVENTION 2004 WILL BE AT THE HARA

The Hamvention will remain at the HARA Arena through 2004. This, according to an announcement from the Dayton Amateur Radio Association which says that it has signed a one year contract that will keep Hamvention at the facility through next years outing.

The Hamvention planners are also looking for volunteers that want to help make Hambention 2004 a big success. To help gather support a new volunteer your services form is available at the Hamvention website. Its an on-line, fill in the blank form and you will find it at www.hamvention.org/volunteer.html. Just fill it out and the Hamvention folks will get back and let you know how you can assist.

The 53rd annual Hamvention will be held May 14th through the 16th, 2004, at the HARA Arena in the Dayton suburb of Trotwood Ohio. (DARA)

**

CONVENTIONS AND HAMFESTS:  MICROWAVE MEET IN THE UK

Meantime, word that the Martlesham Microwave Round Table will take place on Saturday the 8th and Sunday the 9th of November.  This, at the B-T Adastral Park, near the city of Ipswich in the United Kingdom.  Featured will be a full program of talks and seminars including speakers from Europe and the United States along with a giant flea market.  Full information is on-line at http://mmrt.homedns.org.  There is no www in this URL address.  (GB2RS)

**

ON THE AIR:  THE 2003 SIX METER SPRINT

Last weekends 6 meter Sprint brought quite a bit of operation to the Magic Band.  NEZ0P, one of the stations posting to the VHF Reflector says that he heard or contacted several semi rare stations for this time of the year.  This included AA7J in grid DN-30, VE3CDP portable W9 in EM-58 and a couple of others.  John adds that he held 34 Q-S-O's with stations in 25 grid squares during the short operating event.  This included contacts into Maine, New Hampshire and Vermont.  Not bad for a band that usually produces little excitement at this time of year.  (VHF eflector)

**

ON THE AIR:  THE BAJA NET INVITES YOU

Berand Kirschner, WB0YCQ, reminds everyone that the The Baja Net meets daily at 08: 00 local California time on 7.238 Mhz. Kirschner describes the Baja Net as a friendly gathering spot for boaters. RV'ers and others who carry ham radio as they roam.   (WB0YCQ)

**

DX

In D-X, word that ES1FB plans to be active as XW1FB.  This, from Vientiane, Laos, threough the 4th of November.  No word on times, frequencies or modes.  (GB2RS)

Also on through November 4th will be K3BYV and N3CXM.  They will are active as PZ5DX and PZ5JR respectively from Suriname.  For both operations,. QSL as directed on the air.  (GB2RS)

And GB50RAEN is on the air to celebrate the 50th anniversary of the founding of Raynet.  Raynet is Great Britain'd equivlant of our ARES and RACES combined.  The station is being operated by groups from West Midlands Raynet in the UK.  (GB2RS)

Lastly, VK8NSB reports via Q-News that the Darwin Amateur Radio Club in Ausrtralia's  Northern Territory will be operating a special event station to celebrate 25 years of self government. The station signing VI8NT will be on through the 31st of December. QSL directly to VK6NE or via the bureau. (Q-News)

**

## THAT FINAL ITEM:  ARNEWSLINE(tm) NAMES NT3V NEW CHAIR OF YHOTY COMMITTEE

And finally this week, we at the Amateur Radio Newsline are happy to announce the appointment of Mark Abramowicz, NT3V, as the new Chairman of our Young Ham of the Year Award Committee.  Abramowicz replaces Larry Zettwoch, KR4IF, who served in that position the past 9 years.

For those of you not familiar with NT3V, Mark hails from Reading Pennsylvania, and happens to be the father of our 2002 Young Ham of the Year award recipient, Josh Abramowicz, KB3GWY.  But Mark and Josh are not the only hams in the Abramowicz family.  Mark’s wife Suzanna is NZ3G and his daughter Amy holds the call sign KB3IJW.  Only the two youngest members of the Amramowicz family -- sons Jonathan and Jordan are not licensed.  At least not yet.

By profession, Mark is a news reporter and anchor at KYW radio in Philadelphia where he is known professionally as Mark Abrams.  He is also is an adjunct professor at Temple University where he teaches writing for mass media and broadcast newswriting.  And like his predecessor, Mark is very involved with the scouts and scouting program as are his two older children.

A very nice bio on Mark Anramowicz, NT3V, can be found at the KYW website. That U-R-L is http://www.kywam.com/staff/bios_detail.cfm?biosid=53 (ARNewsline(tm))

**

## NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm).  Our e-mail address is newsline @arnewsline.org.  More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org.  You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I’m Jim Davis, W2JKD, saying 73 and we thank you for listening."  Amateur Radio Newsline(tm) is Copyright  2003.  All rights reserved.

>"RL" is an arcane DXers' abbreviation for "religious." Of course, there are
>about 700 AM DXers left in the whole country, so it is normal that no one
>else understand their abbreviations.

Unfortunately, in the context of "RL says "Spanish" which narrows it down a
little." it still doesn't make sense, unless I'm missing something here.

This new device enables XM radio to be used in the car without buying
a whole new radio and replacing the stock radio in the car.

My question... This plays by plugging into the radios caseete player
and plays through this....now,  will this give me FM or FM + quality
sound through this method?

Here's notice of an upcoming DX test...

PLEASE NOTE: Even if you don't hear a test, be sure and drop a card, letter, or e-mail to the station personnel, thanking them for going to the trouble to run a test!

Sunday, December 14, 2003 - WILM-1450, Wilmington, DE will conduct a DX test from 1:05 am - 3:00 am EST.  The test will consist of Morse code IDs, regular IDs, recognizable music and various sound effects. On-air calls will be accepted at 302-656-9800 (Fax:302-655-1450). Reception will be verified with a letter and full-data anniversary QSL card.

Reception reports(with return postage) may be sent to:

Allan R. Loudell
Program Manager
WILM-AM
1215 French Street
Wilmington, Delaware 19801

(Arranged by Ron Musco for the NRC CPC.)

Also, if you hear a test, PLEASE, PLEASE let me know, via either e-mail or in rec.radio.shortwave! And if you send a reception report to a station, please remember to include return postage with your report...

Lynn.

What do you think is better,  Sirius or XM radio?

Sirius now has a plan that it costs $399 for the life of your receiver.  So
if my receiver lasts for over 2 1/2  years,  I would get the service free of
charge from that pouint on.  I've had receivers...not satelite,  for 5 to 12
years.  no receiver I have has ever died before 5 ywears.  Is it a good
deal?  What do you think.

In terms of Quality,  Sirius or XM...any comments suggestions you can give
would be great!

thanks

My pessimism alarm just went off, me thinks Sirius knows the end is near.

> In terms of Quality,  Sirius or XM...any comments suggestions you can
> give would be great!
>

I've heard both and think XM has the advantage in terms of audio quality.
Sirius sounded a little sloppier and, after all, is using the old PAC codec.

However, as always YMMV.

Real meters are prone to sticking.

The bar graph's react quicker and don't stick.

Their format is Spanish.
Also you can check out the campus station at "Southern CT State Univ."
You can go to:

http://radio.southernct.edu/livebroadcast.htm

Let me add that commercials can be scheduled well into the future or to the next break. Every commercial scheduled has an account# and $ associated to it. At the end of the billing period a separate printable list can be made for every account/client showing when their spots ran, which of their spots ran, and the total $.

A remote start for "Live Assist" and Manual Playpack" can be connected.

There is no satellite receiver interface(yet).
There is no automatic scheduled recording(yet).

The software is not provided on its own. It's to be provided as part of a computer/software turnkey product.

Join the GAGLIARCHIVES this Saturday night at 10pm Eastern time for program 817, as we feature an exclusive interview with guitarist Steve Howe. This is his first FM radio appearance in New Jersey for many years. Steve joins us to discuss his new project Steve Howe's Remedy and the new disc titled Elements. Steve has been wowing fans for over 30 years on guitar, and has been featured as best guitarist for many years in several publications. Howe is noted for his work as a member of Yes, Asia and GTR, but he's also a solo artist. Last year we featured Steve's CD titled Skyline which showcased Steve in a soundscape, ambient platform which will chart in our top 100 most popular progressive rock discs of 2003. Don't miss this special program featuring Steve Howe, one of the forefathers of progressive rock music.

Just got the following from Larry Gamble of KTNS...
---
KTNS AM 1060 unable to test Friday evening, October 10, 2003.
Cancellation due to unexpected studio maintenance. Currently doing
test. First test Saturday 10/11/03 Pacific standard time: 5:51 am,
5:55am and 6:06am. Will continue at ten minute intervals until 6:30
am. Sorry for the inconvenience. Please notify accordingly.
Larry Gamble, General Manager
KTNS AM 1060
---
I'm going to ask him about repeating the test this coming Friday
evening, so we have more notice.

Lynn.

I agree with your review.

I have BOTH services and ended up canceling XM. Sirius has a far better selection of music.
The only station I really listened to on XM was Ethel, on Sirius they have about 5 Ethels!

I read in the past about Sirius sound quality not being as good as XM, well all I have to say is no way, Sirius has better sound than my XM , its crisp and clean. XM always sounded muffled.

I am so glad I tried out Sirius, it won me over with quality and great music selection.

Hi,
Anybody listen to ESPN Radio overnight on the weekends? If so, can anybody tell me what happend to The Sports Doctor, Jon Chelesnik's show? I didn't listen for a few weekends in a row, and then one weekend I turn it on and Bob Valvano's show is now on overnight weekends. Did Chelesnik just quit doing his ESPN Radio show or did they not renew his contract or what? Does he do a local radio show anywhere I could listen to on the 'net?

Thanks!

Amateur Radio Newsline™ Report 1365 - October 10 2003

Amateur Radio Newsline report number 1365 with a release date of Friday, October 10th 2003 to follow in 5-4-3-2-1.

The following is a Q-S-T.

Deciding the future of ham radio was not an easy task in Geneva and the problem of Broadband over Powelines continues to grow world-wide. Find out the details on Amateur Radio Newsline report number 1365 coming your way right now.

(Billboard Cart Here)

**

IARU: HOW RADIO REVISIONS CAME TO PASS

The word is out. Some of those who attended last springs World Radiocommunications Conference in Geneva Switzerland are now saying it was not all that easy to reach decisions. Q-News Graham Kemp, VK4BB, has the rest of the story:

--

Just now some of the background work done at WRC-03 is coming to light. The work was intensive. The main conference hall had over 1500 seats, simultaneous translation in 7 languages often more than 10 meetings going on at the same time, distributed in three adjacent buildings.

Some meetings went on till the wee hours of the morning and resumed at the usual time the next morning!

The growing number of completely new radio services clamouring for spectrum allocation, such as for example space borne radars for terrestrial observation, high altitude platforms together with the ever increasing number of new ITU Member States with active participation made the deliberations that much more difficult.

For Q-News Australia, I’m Graham Kemp. VK4BB, reporting for the Amateur Radio Newsline.

--

It was the decisions made at this conference that lead some nations to abandon C-W testing of radio amateurs and also spur the ongoing, world-wide Morse code debate. (Q-News)

**

RADIO LAW: BPL BECOMMING A HOT ISSUE WORLD-WIDE

Meantime, down here in Kiwi-Land as well as around the world, the debate is heating up over Broadband Over Powerline or BPL as its called in North America. This is the technology that claims to provide broadband high-speed Internet services using domestic power lines for system wide transmission and Internet connectivity.

For those not aware, BPL works by injecting the data signal into the powerline near the electricic substation and it travels along the line to the user. In some proposed systems, it interconnects cities using existing long distance power distribution grids.

The problem, of course, is that powerlines are not radio frequency cables. They are not shielded and leak RF energy causing a level of wideband noise in the vicinity of the cable. And as tests conducted by the ARRL have graphically proven, powerlines radiate for long distances.

AC powerlines are a very noisy transmission medium, with spikes and other noise. To make it work, BPL operators have to use higher injection powers to get their data signals to propagate along the cable. Higher injection power mean higher emissions, and this is bad news for all High Frequency radio operators.

By way of example, current proposals in Europe would raise the level of the background noise level on H-F by some 60-70 dB within 3 meters of the cable. Further away, the rise would be less, but still considerable.

Because of this, Broadband Over Powerlines poses a threat not only to amateur radio. Users of many low power devices such as security systems that tag products in shops are very concerned. And High Frequency broadcasters world-wide are fighting to support sensible emission limits for powerline breoadband communications.

But that’s not where it ends. In many places security services are worried. Unfortunately, in some countries, government departments involved in security have been told to not object to BPL as the government policy is to support it.

Civil Aviation communication and aero-navigation can be threatened by BPL. There are reports of an air accident in Canada being directly attributable to interference from broadband cable systems.

And this is only the beginning. New plans for BPL will attempt to use much higher frequencies which could immediately pose a threat to some nations emergency service communications. This is an extremely serious issue for amateur radio world-wide and for other users of the High Frequency spectrum as well. (NZART)

**

RADIO AIDS: NOAA PROPAGATION SERVICE TO GO QRT

Amateurs around the globe may soon loose the propagation information system operated by the United States National Oceanic and Atmospheric Administration. This includes real time data on the state of the interaction of the earth's magnetosphere with the solar wind and state of the earth's magnetic field.

These tools have been invaluable to ham radio operators world-wide for many years.  The reasons it may be going away?  Budgetary cutbacks and lack of future funding.  (Published news reports)

**

Break 1

>From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the Xerox Amateur Radio Clubs WD6CZH repeater serving Los Angeles from El Segundo California.

(5 sec pause here)

**

## ENFORCENMENT:  HAM REPEATERS ARE NOT FOR BUSINESS

Back in the United States, the FCC has written to a Lakewood New Jersey to ask him why a repeater bearing his his call sign is being used as an adjunct to a business band radio system.  The FCC’s Daryl Duckworth, NN0W explains:

--

Duckworth: “Martin Gross, N2DCG, of Lakewod New Jersey, has 20 days to reply to an inquirey about a repeater on 448.825/443.825 MHz and is used as an adjunct to WNVF 627, a business radio system for the Hatzolah Emergency Medical Services, rather than for Amateur Radio purposes as set forth in Section 97.1 of the Commission’s rules.”

--

In a September 11th letter, the FCC notes that Gross’s repeater is not coordinated.  (FCC)

**

## AT THE FCC:  THE FCC's MASTER SEARCH ENGINE

The CGC Communicator reports that there is an obscure but very important search engine at the FCC website.  One that allows you to comb through most of the Commission's licensing systems for specific information.

According to CGC, member databases include Universal Licensing System, Experimental, Cable Operations, Mass Media and International Bureau.  Queries can be set up by frequency range, state, county, location call sign and licensee name.  More information is in the cyperspace address found at http://gullfoss2.fcc.gov/reports/index.cfm  or the backup site at http://svartifoss2.fcc.gov/reports/index.cfm  (CGC)

**

RADIO LAW:  CABLE TOLD TO SOLVE ITS OWN PROBLEMS

FCC Chairman Michael Powell has told the cable industry that it needs to work out its own problems before appealing to regulators for remedies.  At a recent appearance at the annual cable sector conference Powell highlighted issues that have driven a wedge between cable companies and local broadcasters. Specifically, the rules that dictate what over the air channels cable outlets must carry on their systems.

Currently, cable companies are required by law to carry local broadcast channels. But broadcasters are also hoping regulators will eventually force cable companies to carry both digital and analog signals during the broadcasters' transition period to all digital transmission.  But cable companies argue that if they were forced to carry both a broadcaster's regular analog signal and digital signals, it would significantly deplete their capacity to air other channels.  (Published reports)

**

RESCUE RADIO:  ORGANIZING 60 METERS IN VA

Bringing emergency communications to 60 meters is the theme of a new net organized by Virginia RACES, Inc.  This, by providing a twice monthly opportunity for equipment tests in the new spectrum asllocation.

The Mid-Atlantic Emergency Net began opeeration on October 1st.  It now takes place  the first and third Wednesdays of every month at 2000 hours Eastern Time on 5330.5 using upper sideband.

All ARES, RACES and other emergency communications organizations within reliable communication range of the net are encouraged to participate. Liaisons are also invited with similar groups in neighboring states.  (Via e-mail)

**

GETTING YOUR E-MAIL:  AOL BLOCKS QRZ.COM

If you use America Online as an internet service provider and are waiting for e-mail or a password from QRZ.com, this is for you. A-O-L has decided to unilaterally block delivery QRZ.com e-mails unless a specific A-O-L user goes to the trouble of unblocking his or her own account.

According to QRZ, they have been getting up to 50 emails a week from America Online users who have not received their QRZ passwords or Links.   QRZ advises that it is A-O-L and not them that has placed spam filters on incoming e-mail. To fix the problem, users must log onto A-O-L,  go to “SPAM CONTROL” and set it so that e-mail from QRZ.com as an allowable e-mail address.

QRZ adds that it has no other way of sending America Online users a password or log on information as A-O-L has QRZ e-mail filtered out.  (qrz.com)

**

HAMVENTION 2004:  YOUR IDEAS ARE SOLICITED

Turning to the convention scene, the planners of Hamvention 2004 are putting out a call to the world-wide ham radio community.  They say give us your input and we will listen.

According to the Hamvention website, those in charge of next years gathering have implemented what they call a new "open door policy."  In other words, they want to hear your suggestions or comments on how to improve their show. They also promise to consider your ideas, discuss them, and implement them if possible.

If you want to help make Hamvention even bigger and better, now's your chance.  Sit down at your keyboard and write the 2004 Hamvention team directly at w-mail to info@hamvention.org.  And yes, they promise a personal response to every e-note that's received.  (Hamvention)

**

CONVENTIONS AND HAMFESTS:  DENVER COLORADO IN OCTOBER

Still with hamfets and conventions, the Rocky Mountain Radio League welcomes everyone to the 2003 R-M-R-L Hamfest slated for October 18th at the Jefferson County Fairgrounds in Golden Colorado.  For more information e-mail Ron Rose to N0MQJ@rose3.com.  (Press release)

**

CONVENTIONS AND HAMFESTS:  SOCORRO N.M. ON OCT 25

Also, mark down Saturday October 25th for New Mexico's Socorro Hamfest. Socorro is about 80 miles South of Albuquerque.  This year the venue is the Firefighters Training Academy with R-V parking available.  For information by e-mail please write to ac5bx@arrl.net.  (e-mail)

**

WITH THE SCOUTS:  A SPECIAL ON JOTA

Last reporter Mark Abramovich, NT3V, told you that the 46th annual Boy Scouts of America Jamboree on the Air will take place on October 18th and 19th.  Now Mark has prepared a special report that details the Jamboree on the Air and the very unique relationship between scouting and ham radio.

--
AUDIO HERE
--

Mark's report is our September Newsline Extra.  It can be downloaded as an M P 3 file from our website at www.arnewsline.org/quincy.  Just scroll down to the bottom of the page, click on ARNewsline Extra, turn your speakers up and enjoy. (ARNewsline(tm))

**

PROMOTING HAM RADIO: JOTA VIDEO NEEDED

Are if you are planning to take part in this years scouting Jamboree on the Air and own a good quality home video camera, your help is needed. As you know, Dave Bell W6AQ, Alan Kaul W6RCL and Bill Pasternak, WA6ITF, are always looking for good video of ham radio happenings that they might be able to incorporate into a presentation about the hobby. As scouting and ham radio enjoy a very unique relationship, this is an event that is sure to make it into one of their shows, but only if they have the pictures and sound.

Since the Jamboree on the Air happens only once a year, that’s where you come in. What’s needed are volunteer camera people to take their gear to where the scouts are holding their JOTA gatherings and videotape them in action. Pictures and sound of them setting up their JOTA campsites, ham stations and their on-the-air operations. Also wanted is video of licensed scout hams introducing non-ham scouts to our very special new world of Amateur Radio.

If you can help in this project, or want more information, e-mail the production team to hamvideo@juno.com. (The Producers)

**

BREAK 2

This is ham radio news for today’s radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

**

CHANGING OF THE GUARD: DANNY WEIL, EX-VP2VP - S.K.

The changing of the guard in ham radio continues. This with word from the San Antonio Radio Club that Danny Weil, the former VP2VP, has passed away October 3rd at age 86.

Weil is best known for his post World War 2 DX operations. During the 1950’s and 1960’s Weil took to the ham radio airwaves from numerous exotic locations that he sailed to in a boat named the YASME.

Born in the UK in 1918, Weil had been living in a managed care facility in Texas since suffering a stroke in 2001. But during his lifetime his voyages lead to the setting up ham radio stations on remote islands around the world and contacts with over 100,000 amateur radio enthusiasts. His exploits are credited with giving birth to the terms D-X’er and D-Xpedition.

Weil’s adventures and those of the Colvin’s -- Lloyd W6KG-and Iris W6QL -- lead to the formation of the famed YASME Foundation that assists DX operations world wide.  Services for Weil were held in San Antonio Texas on Wednesday, October 8th.

More about the life and death of Danny Weil is on-liner at
http://obit.porterloring.com/obit_display.cgi?id=82269&clientid=porterloring
(San Antonio Radio Club, Paul Guido)

**

RADIO TRAGEDY:  HAM KILLED TRYING TO ACTIVATE DX STATION

A ham radio operator has died while trying to put a rare location on the air. RSGB News Reader Jeramy Boot, G4NJH, has the tragic details:

--

We are sad to have to report the death of Richard Baker, M3RWB, who died as the result of injuries sustained while climbing Aran Fawddwy in North Wales. He was intending to activate the summit for the Summits on the Air, or SOTA, award programme.

The Summits on the Air management team has released a statement which says, "Richard was an experienced hillwalker who saw SOTA as a good opportunity to re-ascend many summits that he had climbed in the past.  His death is an untimely reminder that while accidents can happen anywhere, the mountains can present special dangers to those who are experienced as well as those new to mountain travel."

Jeramy Boot, G4NJH

--

The Summits on the Air management team went on to stress that in all cases, the safety of those travelling must come above the desire to ascend to the mountain.   (GB2RSO)

**

RADIO RECORDS:  US TO CZECH REPUBLIC ON 24 GHZ

Shooting for the moon has provided two hams the first-ever United States to Czech Republic E-M-E contact on 24-Ghz.  The ARRL Letter reports that Amateur Radio moonbounce and microwave history was made September 24 at 1400 U-T-C when Josef Sveceny, OK1UWA, and Al Ward, W5LUA, completed the 24-GHz EME QSO between the two nations.

Sveceny used a 3-meter Prime Focus dish with 35 watts at the feed, vertically polarized.  Ward’s station also utilized a 3-meter Prime Focus dish with but with 70 Watts at the feed.  Ward was horizontally polarized to account for the spatial offset between North America and Europe.  Previous international 24 GHz EME QSO's have taken place between the US and Canada, the US and Russia and Canada and Russia.  (ARRL)

**

INTERNATIONAL - INDIA:  ECHOLINK COMES TO VU

News out of India is that a new EchoLink VHF Repeater has been installed at the Indian National Institute of Amateur Radio.  The new system allows local hams in Hyderabad to contact Amateur stations all over the world twenty-four hours a day.  According to Jose Jacob, VU2JOS of the National Institute of Amateur Radio, this is the second such repeater to go into service in India.  (GB2RS)

**

INTERNATIONAL - UK:  RAYNET AT 50

The Radio Society of Great Britain is hosting RAYNET's 50th Annniversary Emergency Communications Convention in Birmingham, England on Saturday the 25th of October.  RAYNET is the U-K equivlant to our RACES an d ARES combined. Paul Gaskell, G4MWO, tells Newsline that in addition to the convention, a special event station will be taking to the airwaves as GB50RAEN.  It will be on the air from October 20th till the 31st.  QSL's go via RSGB Bureau. Further information is in cyberspace at www.rsgb.org/emergency  (GB2RS)

**

ON THE AIR

On the air, HE2GR is a special event call for the USKA club station HB9GR. It's on the air to celebrate the 200th anniversary of the Swiss Cantons of St Gallen and Graubuenden. HE2GR will be active on CW, SSB and digital modes until the 30th of December.  QSL as directed on the air.  (VHF Reflector)

**

DX

In DX, ZL3CW will be active as ZM8CW from Raoul Island in the Kermadecs through the 18th of October. Jack says that he will be there doing maintenance work for the Department of Conservation and hopes to be active in his spare time. This is actually not a DXpedition, but ZL3CW is considered to be one of the better Morse operators and enjoys the challenge of the pile-ups.  (Modern DX'er)

And a D-Xpadition to Annobon Island was forced to shut down prematurely.  This after authorities ordered operations curtailed on October 4th local time. According to the various D-X remailers, no reason was given for ordering the 3CZ0V ham radio operation off the air.   (Via Internet)

**

## THAT FINAL ITEM:  HAM RADIO AT THE NYC MARATHON

For this weeks final story we turn the ham radio sports page and one of the biggest events of the year thats about to take place.  And its Amateur Radio that makes it happen.  We have the details in this report:

--

If you want to see a shining example of how valuable amateur radio can be as a public service, look no further than New York City the first week in November. Providing communications for the marathon is no small job. Just ask Communications Director Steve Mendelsohn, W2ML.  When the marathon was run back in 1976, 26 hams provided communications assistance. This year, 425 hams will help, and they'll do it using 9 repeaters on 2 meters and 440. Mendelson says it's a source of pride for the ham volunteers who come from across the country:

--

Mendelsohn: “Just like Disney's fantasy land, once you hav e been there you want to come back over, over and over again.”

--

The marathon isn't just for New York area hams. Mendelsohn says amateur radio operators show up from more than half a dozen states to help:

--

Mendelsohn:  “We have people coming back from Colorado, coming back from Vermont, from florida.  They come in  from all over.  Seven states, twenty-six miles, no waiting.”

--

New York's boroughs will be flooded with over 30-thousand runners this year. The hams helping will be part of more than 9-thousand people volunteering.  How you manage that many people could be a massive challenge -- but Mendelsohn says race organizers figured out how to do it:

--

Mendelsohn: “You break the nets up into sizable chunks.  You name a Mile Captain for each of the miles, and the Mile Captain manages a staff of anywhere from 3 to 15 people.  Oncve you get further along in the race where there is more of a chance of the runners falling and dropping out because thery are tired, you increase your manpower.”

--

18 net controllers with 2 standby operators will be on duty.   Communications start at 3 a.m. race day and go until 6 o'clock that evening.   35 hams will be on hand at the starting line alone. Once the race is done, Mendelsohn says the hams' work doesn't end. For this many runners and their family members to reunite takes up an area of more than five blocks.

Hams help there, too. And they'll tag along not just with race organizers, but with translators who will need amateur radio operators by their side, too. It's a huge undertaking that takes a lot of planning and makes for a very long day. But the hams helping out with New York City's marathon wouldn't trade it, because Mendelsohn says, it's just plain fun.

>From Birmingham Alabama, I’m David Black, KB4KCH, for the Amateur Radio Newsline.

--

For those of you in North America who might want to grab a glimpse of ham radio in action, NBC Sports will broadcast a one hour New York City Marathon highlights show nationwide beginning at 2:00 p.m. EST on November 2nd.  Check your local listings for details.

Also, the full interview with Steve Mendelsohn, W2ML, can be heard on this weeks RAIN Report.  Its as close as your telephone at 847-827-7246 or on-line at www.rainreport.com.  You can find more information on the race in cyberspace at www.ingnycmarathon.org.  (ARNewsline(tm))

**

NEWSCAST CLOSE

For many years I had a RatShack scanner in my office, but things have changed.

I'd like to buy a desktop scanner again, all freqs, dual trunking, but no programming required.

Is there such a thing out there?

Not trying to start an argument (really!!) but ***why would a broadcast station even bother with these tests, other than maybe nostalgia or some sort of uber-techno-geekiness on the part of the Chief Engineer or GM*** ?

I don't have any problem with DX tests (in fact, they're kind of neat) but I guess I'm asking what really motivated stations to start doing them way back when ?  Sheer curiosity ?

Along the same lines, how many broadcast stations respond to reception reports nowadays ?

Just wondering......

First, the KTNS-1060 test that was scheduled for 10/10 has been rescheduled for 10/18 (Saturday) from midnight-1am PDT (3am-4am 10/19/03 EDT). KTNS's format is MOYL, and some Morse IDs will be played. KTNS would especially like to hear from those in the East that hear their test! You can send reception reports to:

Mr. Larry W. Gamble
General Manager
KTNS-AM
40356 Oak Park Way
Oakhurst, CA 9364

or

email mtkaat@sierratel.com (or see their web page at http://www.ktnsradio.com)

[ Moderator's Note: Typo - that zip is 93644. sjs ]

AND...

Here's notice of an upcoming DX test...

PLEASE NOTE: Even if you don't hear a test, be sure and drop a card, letter, or e-mail to the station personnel, thanking them for going to the trouble to run a test!

Saturday, November 1, 2003 - WJNT-1180, Jackson, MS will conduct a DX test from 12:00 am - 1:00 am CST.  The test will consist of regular programming (talk programming) and Morse code IDs. WJNT will be operating with 50 kW non-directional.

Reception reports(with return postage) may be sent to:

Stan Carter
Chief Engineer
WJNT-AM
P.O. Box 1248
Jackson, MS 39215-1248

WWW: http://www.wjnt.com
E-Mail: slcarter@wjnt.com

Also, if you hear a test, PLEASE, PLEASE let me know, via either e-mail or in rec.radio.shortwave! And if you send a reception report to a station, please remember to include return postage with your report...

Lynn.

I have a 4watt transmitter pro III stero encoder & 40watt amp all nrg kits stuff I will elese through in some cb stuff to.  I am looking to trade for a homemade or a couple of years old setup that is pll 80 to 100 watts but 50 watts or more will do.

My transmitter works but need to be boxed stereo encoder work but need to be boxed amp need to be fixed and a fan added.  So if you want to trade and you want to lower your power please let me know.

Http://www.starkelectronic.com/aps13.htm  would this be a good if converted to
transmitting.  I have a 5/8 wave comet would the APS-13 be a better antenna &
how much better of a antenna would it be.

```

>From Canada, when trying to tune in a weak signal from the USA to get National Public Radio I find that at night and on cloudy days the signal is clear and fine. I am using a Showgun TV antenna and amplifying it through a Trisonic 10db 10-900 MHz box.

On bright sunny days, at about 10 am when the sun is rising higher in the sky the signal gets
gradually worse until there is so much interference that the signal is as good as lost. In the evening it comes back and is clear again. It appears to affect only weak stations, the local stronger stations have no interference.

Can anyone tell me what may be triggering this noise? Is there anything I can do about it?

Thanks

```

WCBN WILL DESTROY YOUR FEEBLE FORMATS

WCBN - 30 Years of Freeing Your Mind - Listen to us online!

WCBN is the University of Michigan student-run community freeform radio station in Ann Arbor, Michigan. We broadcast at 200 watts to the University and its surrounding communities from the basement of the Student Activities Building in downtown treetown.  We have been broadcasting a genre-less overview of music, news, and public affairs for 30 years.

WCBN's musical format is freeform, with some specialty shows. Freeform involves all different kinds of music, including jazz, reggae, blues, hip-hop, country, rock, and just about everything else under the sun. Instead of telling our DJs what to play, we allow them to select their own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an intelligent fashion, and show links between musical genres.

Click here to listen to our live WCBN-FM Ann Arbor broadcast!

Cloud bounce, or atmosphere bounce. I used to get 102.3 from Cape May NJ in
certain parts of Baltimore in the 7am-9am range during days with foggy
mornings. As the fog burned off the reception vanished.

I am trying to get info about rural radios on line...community radios that use Internet to spread their local views and make it cheaper. Any news of networks of this type at the EU level?

Thanks in advance to anyone providing answers to this hard question

I think it's the better choice of the two.  I've had XM for about
four weeks, and the AM/FM radio is almost never used now, except
that I've connected the XM unit to its auxiliary so as to feed XM
into a radio in the kitchen  so as not  to miss anything!
I'd recommend XM to anyone wondering about going in for satellite
radio. (No, I have no connection with them:   just a customer).

For anyone interested, here's a reminder of upcoming DX tests; if
anyone
has any additions or corrections, please contact me. (BE SURE TO NOTE
THE TIME OF THE TEST; THEY ARE IN THE LOCAL TIME OF THE STATION)

Sunday, October 19, 2003 - KTNS-1060, Oakhurst, CA 12:00 am-1:00 am
PST (3-4am EST).
E-mail: mtkaat@sierratel.com
WWW: http://www.ktnsradio.com

Saturday, November 1, 2003 - WJNT-1180, Pearl, MS 12:00 am-1:00 am CST (1-2am EST).
E-Mail: slcarter@wjnt.com
WWW: http://www.wjnt.com

Please remember, what's listed as being on, say, Monday *may* be what you think of as Sunday night!

If you try for (or hear) any of these tests, PLEASE post a message letting me know, and please, drop the station personnel a note, via e-mail or snail mail, thanking them for running the test! Also, for brevity's sake, I didn't post the QSL addresses; if you need these, let me know!

Lynn.

Amateur Radio Newsline™ Report 1366  October 17 2003

Amateur Radio Newsline report number 1366 with a release date of Friday, October 17th 2003 to follow in 5-4-3-2-1.

The following is a QST.  A chance for pro-code to speak out to the FCC and a warning to firefighting officials about  the hazard of BPL.  Find out the details on Amateur Radio Newsline report number 1366  coming your way right now.

(Billboard Cart Here)

**

RESTRUCTURING:  MORSE CODE AND THE FCC - ROUND II

Well we told you it was going to happen and it has.  We are talking about the next round of rule making requests to the FCC on the topic of what to do about Morse code testing. Most of this group want to keep some form of CW test. Amateur Radio Newsline's Bruce Tennant, K6PZW, takes a look at what the FCC wants you to read and comment on:

--

If you were not happy with the first round of Morse code rule making requests, maybe you will find something more to your liking in this latest batch of seven that the FCC has released for public comment.

We have already covered the most prominent of them. That being the one from FISTS -- the international Morse code preservation society. FISTS wants the code retained and all aspects of the ham radio exam process made allot tougher. And in this area, FISTS is not alone.

In is petition, Frank Napurano, K2OKA, calls Morse the purest, most accurate, efficient, reliable and economical form of radio communications ever devised. He tells the FCC that its essential to keep at least the current 5 word per minute CW test in the interest of public safety, the preservation of a radio art and as a tribute of support for a prized and respected avocation.

Also in favor of keeping some form of Morse exam is the Puerto Rico Amateur Radio League. While it wants the FCC to do away with the current 5 word per minute test for General class it says to keep it for those going for an Extra ticket.

James Roux, W4YA, wants the FCC to eliminate the 5 word per minute code test for a General class license, but like the Puerto Rico Amateur Radio League would require Extra class applicants prove they can do Morse at 15 words per minute. Roux also wants to cut the number of licenses to only two. Under his proposal nobody would loose current privileges but only the General and Extra class would continue to be issued.

Meantime, Robert Rightsell, AE4FA and Harry Kholer, NZ0PU also want 5 word per minute Morse testing continued but would institute a points score system for passing a ham radio exam. Under the Rightsell / Kholer plan, an applicant could earn up to 24 points on Morse testing.

And Joseph Speroni, AH0A, has a novel idea. Only test hams in Morse who want to use the mode. Speroni would have the FCC delete the CW exam for those who want to operate only phone. If a ham wants to operate High Frequency Morse, Speroni says they should pass the current 5 word per minute exam.

Last but by no means least comes Charles Young Jr, AG4YO. He is asking the FCC to delete the 5 word per minute Morse exam for the Technician Plus license, but keep it as a requirement for General and Amateur Extra exams. And like the other petitioners, Young has some specific ideas regarding other aspects of ham radio licensing as well.

These seven petitions have been designated as RM 10805 through 10811. Commentary cutoff on all of them is Friday, November 7th.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, reporting.

--

You can comment on one or all of these rule making petitions by taking your browser to the FCC Electronic Comment Filing System. Its in cyberspace at www.fcc.gov/cgb/ecfs. (ARNewsline™ from FCC website)

**

RESTRUCTURING: QRZ SAYS KEEP THE DISCUSSION ON TRACK

In a related story, the operators of the QRZ.com website have drawn a proverbial line in the sand. They say that any attempts to take a Forum discussion that is not directly related to the code versus no code debate and turn it into such will result in those posting being removed. The operators of the website say that this is not a stance by QRZ.com either for or against Morse code. Rather it is a their way to keep a given subject being discussed on track. The QRZed website is in cyberspace at www.qrz.com. (QRZ)

**

RESTRUCTURING: PNG GOES CODE-FREE

I'm Don Wilbanks, AE5DW, with breaking news out of the South Pacific. Dateline Papua New Guinea where that nations Telecommunications Administration, PANGTEL, has declared Papua New Guinea to be the latest nation to become code free. This as it orders the deletion of Morse Code from the qualifications necessary for its amateurs to have access to the High Frequency bands.

According to Rick Warnett, P29KFS, the decision to drop Morse was actually made back on June 10 th but not widely publicized until now.  June 10 th was before the 2003 World Radiocommunications Conference that decided Morse testing was no longer mandatory world wide and retaining it would be the decision of each individual administration.

Warnett, who is the IARU representative for the Papua New Guinea Amateur Radio Society says that the official announcement will take place within the next few days.   When it comes, Warnett says that some 30 to 40 new Papua New Guinea full call hams will have international communication available to them.  (Q-News)

DX PROBLEMS:  A FOLLOW-UP ON ANNOBON ISLAND - 3C0V

A little more information has surfaced on why a long awaited Dxpedition suddenly left the air.  Jeramy Boot, G4NJH, has the details:

--

The Spanish and German group that had been operating as 3C0V from Annobon Island off the West Coast of Africa were forced to close down early in the morning of last Saturday, the 4th of October. The DXpedition was scheduled to have continued until the 10th of October.

Gabriel 'Gaby' Mardiros, OD5NJ, the 'pilot' for the 3C0V DXpedition, says that the group is "fine" but that they had received "a serious warning not to use any of their radios". The reason for the enforced closure was not yet known."

--

Some reports indicated that local authorities had given the DXpeditioners less than 24 hours to pack up and get off the island. More on this story as information is made available.   (GB2RS)

WRTC: 2006 GAMES IN BRAZIL

It has been announced that the next World Radiosport Team Championship, or 'WRTC', will be held in Brazil in 2006. The last WRTC event took place in Finland in July last year.

WRTC brings together the top HF contesters from all over the world to compete on - as far as is possible - a 'level playing field'. WRTC 2006 will take place in Florianopolis, capital of Santa Catarina State in southern Brazil. The event is open to everyone: competitors and spectators alike.

I'm Jeramy Boot, G4NJH, in Nottingham. (GB2RS)

**

RADIO RULES: WORLD'S BROADCASTERS JOIN ANTI-BPL CHORUS

A subcommittee of an International Telecommunication Union panel of technical experts responsible for terrestrial broadcasting issues has joined a growing chorus of concerned parties about the interference potential of power line telecommunication. According to the ARRL Letter, ITU Radiocommunication Sector Sub Working Group 6E1 has been looking at BPL. Now it has expressed the view that interference produced by systems employing powerline data transmission as well as by Industrial, Scientific and Medical equipment and short-range devices, will compromise broadcast reception. (ARRL, CGC)

**

## RESCUE RADIO:  BPL VS. FIRE RADIO COMMUNICATIONS

Meantime, hams who are also firefighters or have access to the local fire Department should consider enlisting their help in fighting the rollout of Broadband over Powerlines.  This, due to the heavy use of the 33 and 45 MHz radio bands by fire departments.

Writing to the QRZ.com super site, Jim Walsh, K3JIM, says that some fire departments are not technically savvy and think that interference is really blind spots in the radio coverage.  Walsh, who is a firefighter and truck engineer Red Lion, Pennsylvania, says that broadband interference is not easily recognizable to fire personnel as say an interfering DX station may be to the trained ear of a ham radio operator.  He says that the fire service is used to dead spots and may not know why they exist.

Walsh cites one situation in the area where he lives and works.  He says that it is well known that when in the vicinity of certain gas station convenience stores in his area that one cannot use the radio for a few hundred meters.  He says that in this case the problem is the Point of Sale system that records the gas transactions and that the lines running to the pumps are not shielded and radiate computer hash like an antenna.

K3JIM has lots more to say about the problem BPL can be to low-band fire radio systems.  You can read it all on line at www.qrz.com
(K3JIM via qrz.com)

**

## ENFORCEMENT:  YOU ARE NOT SUPPOSED TO OPERATE THERE

In regulatory news, two hams have been asked to explain why they have been heard operating on law enforcement frequencies.  The FC's Daryl Duckworth, NN0W, has more:

--

Duckworth: "Tom Christman, KB2NAV, of Albany New York, has received an inquirey as to operations on the Albany County Sheriff's Department emergency frequencies without legitimate purpose last December.

Along similar lines, Joseph Hutchins, KG4SXD, of Swannanoa, North Carolina, is being asked about operations on police frequencies in February of this year. That of the Black Mountain Police Department in Black Mountain North Carolina."

--

Both hams were given 20 days to respond to the FCC's query. If the agency finds that rules have been violated, each ham could face a fine of $7,500 to $10,000, license suspension and revocation.

**

ENFORCEMENT: AMATEUR TOLD TO KEEP HAM GEAR OFF CB

The FCC has written to James Perryman, KC8KOU, of Toledo Ohio. This, regarding continued complaints involving his alleged operation of non type accepted radio gear on the 11 meter band. Again, the FCC's Daryl Duckworth, NN0W:

--

Duckworth: "The letter went on to say that the operation of non-certified equipment on CB frequencies, such as Amateur equipment and linear amplifiers will result in a monetary forfeiture in the $7500 to $10,000 area, as well as the in-reim seizure of all non-certified equipment in cooperation with the United States Attorney in his jurisdiction."

--

The FCC also told Perryman that his station is subject to inspection at any time by Commission personnel.

**

ENFORCEMENT: YOU CANNOT SAY THAT ON THE RADIO

Meantime, Federal regulators have announced plans to fine a Detroit radio station $27,500. This, for an allegedly indecent broadcast on a popular afterboon show back in January of 2002.

In a Notice of Apparent Liability to Monetary Forfeiture, the FCC said a broadcast on Infinity Broadcasting's WKRK-FM included explicit and graphic sexual and excretory references during separate discussions with nine separate people. Such language is banned under FCC rules.

Infinity was given 30 days to contest the notice. In earlier filings with the FCC, the company argued that no penalty could be assessed. This is because Infinity believes that the FCC's definition of indecency is unconstitutional.

**

ENFORCEMENT: LA REPEATER OWNERS ORGANIZE AGAINST ALLEGED UNLICENSED OPERATOR

Repeater owner operators in the Los Angeles Californias area are taking action to keep transmissions allegedly coming from Jack Gerritsen, the former KG6IRO, from being retransmitted. In are rare show of cooperation, system owners and their control operators are taking repeaters off of the air rather than permit the signals from a station identifying with the call sign KG6IRO call sign from being rebroadcast.

If the name Jack Gerritsen sounds familiar its because we have reported on hin several times before. Gerritsen was licensed for a very brief period back in 2001. His ham ticket was set aside by the FCC's Wireless Telecommunications Bureau after the agency learned that Gerritsen had been convicted in 2000 on charges of interfering with Los Angeles Police Department radio transmissions. Gerritsen recieved a jail term for the interference conviction. He was paroled but sent back to prison after allegations surfaced that he had been operating a radio transmitter without a license. He was released before serving his full sentence as the result of a Federal court order dealing with overcrowding in California state prisons. His application for a ham radio license remains in the FCC's pending file and a hearing on the matter will be scheduled at some future date.

Be that as it may, Los Angeles area repeater owners are not waiting for the FCC to move in the matter. They have taken matters into their own hands and are acting to keep the signal claiming to be KG6IRO from being repeated. (ARNewsline™)

HAM RADIO BUSINESS:  73 MAGAZINE FOLDS

73 Magazine is the latest casulty in the weak world-wide ham radio business economy.  On Monday, October 6th, founder Wayne Green, W2NSD, e-mail several friends to tell them that 73 Magazine has ceased publication after completing 43 years.

The reason for 73 going away?  Green claims that the hobby is slowly dying as a result of a lack of new hams.  In turn the the industry that supports Amateur Radio is fading away as well.  Green says that without sufficient advertising the magazine couldn't continue.

--

Green:  "The book sales have kept 73 going for the last few years, but book sales have dwindeled way, way down and there was no way to keep 73 going.  The ad sales are down and the reciepts from the ad sales are down even weorse than the ads."

--

W2NSD says that it was an interesting 43 years and that he hopes to write about it some time.  In the meantime he plans to continuing his essays on his website for those subscribers who mainly bought the magazine to read them.  Thats in cyberspace at www.waynegreen.com.

No word what will happen to those with outstanding subscriptions to 73, especially hams who bought lifetime subs at a bargain price when the magazine first started up.  Green always said it would last through his lifetime or that of the purchaser, but it looks as if W2NSD and a number of lifetime subscribers may have outlived 73.  We expected it of Green.  His phonetics are W-2-Never-Say-Die.

You can hear W2NSD talk about the demise of 73 on this weeks RAIN Report.  Its available on-line at www dot rainreport dot com or by telephone at 847-827-7246. (ARNewsline™)

**

HAM RADIO BUSINESS:  NEW KIDS HAM RADIO MAGAZINE TO BE PUBLISHED

If the ham business is as bad as Wayne Green says, you would not know it by Larry Mahlberg AA0BY. As 73 sails into the sunset, Mahlberg has announced his own new ham radio magazine targeting the younger generation.

According to Mahlberg, he and his crew are putting together a brand new monthly publication called "Hamtastic Kids" that will debuet on November 15th and be available by subscription. To get it started, AA0BY is asking your help by submitting material for publicatoon such as Amateur Radfio poems, stories, puzzles and even ham radio recipes. He is also looking for articles written by kids on such topics as Morse code, DX'ing, ragchewing, fox hunting, contesting and hamfests.

But thats not all. The Hamtastic Kids is offering a free years subscription for best logo that a youngster submits for use in the Magazine. Submissions of logos, articles and information requests go to Hamtastic Kids, in care of Larry Mahlberg, AA0BY, P.O Box 1634 Eugene, Oregon, 97440 (W8HDU)

BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

RESCUE RADIO: APRS JOINS THE CHARLES REGATTA

Almost two decades after it was developed by an Amateur Radio operator, Automatic Position Reporting System equipment is being used for the first time by the hams on board the rescue launches at the Head of the Charles Regatta. Amateur Radio Newsline's Norm Seeley, KI7UP, reports:

--

Bob Bruninga, WB4APR, is considered the father of the Automatic Position Reporting System thats known in ham radio circles by the acronym of four letters APRS. And from October 17th through the 19th a team of up to 30 operators will be on the air using it and other modes to operate a safety communications net for the annual Head of the Charles Regatta.

According to Bruce Pigott, KC1US, the addition of APRS is very significant because it allows automatic tracking of a ham radio station by sending Global Positioning Satellite information along with the voice or other data on the radio signal. This should permit precise dispatch of land and river emergency units to rendezvous with the launches.

KC1US says that communications coverage begins three hours before the first race on Saturday and an hour before the first race on Sunday. This, will allow medical and public safety communications coverage of practice runs and gathering crowds of spectators.

For the Amateur Radio Newsline, I'm Norm Seeley, KI7UP.

--

This year's communications support covers all aspects of the regatta. This includes preparations, practice and competition for all three days of the event. (KC1US)

**

HAM RADIO CONFERENCES: SVHFS IN GEORGIA IN 2004

The 8th Annual Southeastern VHF Society Conference will be held in Georgia on April 23 and 24, 2004. This, at the Holiday Inn Hotel & Suites in Marietta on the outskirts of Atlanta. More information will be posted the Society webpage. The u-r-l is www.svhfs.org. Qustions go by e-mail to rover@wireco.netb (SEVHFS)

**

HAM RADIO IN SPACE: VU-SAT LAUNCH DELAYED

Turning to ham radio in space, the expected launch of India's VU-Sat has been delayed indefinitely.  The AMSAT News Service quoting a release from the launch agency says that during the thermo vacuum test deviations in the performance of the ham radio payload were. Because of the need to correct these abnormalities, the launch will take place at some later date.  VU-Sat was to be a passenger with a remote sensing satellite being orbited onboard from Sriharikota launch range later this month.  (AMSAT)

**

## HAM RADIO IN SPACE:  HAPPY BIRTHDAY AO-40

AMSAT is sponsoring an AO40 Birthday Bash to celebrate the satellites 3rd Birthday.  The party continues through  November 17th.  Email Bruce Paige, KK5DO, for more details. His e-mail address kk5do@amsat.org  (AMSAT)

**

## INTERNATIONAL - GERMANY:  DL3KWF RESIGNS AS DARC VP

On the international scene, word from Germany that Hardy Zenker, DL3KWF has resigned from his post as Deutscher Amateur Radio Club vice president   He has been replaced by Ingobert Dittrich, DK9MD, who was elected to the post.  Dittrich is well known as a former representative of the broadcasters to numerous committees across Europe.  The Deutscher Amateur Radio Club which is Germany's natioonal ham radio society holds elections every two years.  (DARC)

**

## INTERNATIONAL - HOLLAND:  ARTIFICIAL BROADCAST ISLAND TO DISAPPEAR

A significant piece of Dutch broadcasting history may soon cease to exist.  Media Network reports that the Hollands Department of Public Works has announced its decision to dismantle the artificial platform in the North Sea known as R-E-M Island.  The island was constructed in 1964 at a cost of 9 million guilders by a team of entrepreneurs who used it to broadcast radio and television programs to the Netherlands under the name Radio Noordzee and TV Noordzee.
The full story is on-line at

http://www.rnw.nl/realradio/features/html/rem031009.html (Media Network)

**

## INTERNATIONAL - BRAZIL: CELEBRATING SCOUTING ON THE AIR

And Brazillian club station PY3ARD is on the air as ZW90S for the renmainder 2003. This, to celebrate the 90th anniversary of the Gerge Black Scout Group which happens to be the oldest Scout Group in Brazil. According to the RSGB, the ZW90S call will be aired for the first time during the upcoming CQ World Wide contest. If you work it, QSL via PY3ARD. (G2RS)

**

## ON THE AIR: W6AQ AND K6IPV TO RAROTONGA OCT. 21

Hollywood producer Dave Bell, W6AQ and his close friend Don Lisle, K6IPV are headed to Rarotomga. This for a combined mini-D-Xpedition and contest operation. The pair will arrive on the island at about 9:00 PM local time on October 20th. They hope to be on the air by the afternoon of the 21st operating mostly SSB with some CW and possibly RTTY and PSK-31.:

--

Bell: "They will hear us calling CQ on whatever the highest frequency where there is propagation which is going to be during the daytime perhapps 10 meters; 15 meters hopefully and 20 meters certainly. Nighttime we will probably be dealing with 20 meters, 40 meters, 80 meters and perhapps even 160 meters. We will see if we can talk to anybody on that band."

--

Bell will operate as ZK1AQT and Lisle will be on using ZK1IPV. Both will be on as ZK1SSB for the CQ World Wide SSB Contest and will tear everything down on the afternoon of October 28th. Their QSL Manager is Norm Friedman W6ORD whose address is good in just about any Callbook. (ARNewsline™)

**

DX

In D-X, TM9AF will be on the air through October 26th to celebrate the 25rh anniversary of the Auxerre Ham-Expo.  About 20 operators will be on the air with the special callsign on 160 to 6 metres using CW, SSB, PSK, RTTY, and Slow Scan TV.  They will also operate 2 meters to 1.2GHz on CW, SSB FM, RTTY, and ATV.  If you make contact, Q-S-L as directed on the air.  (GB2RS)

Stefano Frau, IS0WBT, says by way of e-mail that special event station ISZ0A will be on air during the upcoming CQ World Wide SSB contest.  This on the on 25th and 26th of October.  Stefano says that the operation will take place from Mt. Cresia in grid square JM49QG. Operation will be in the multi-multi catagory and the operators will be looking to talk to all of you.  QSL direct to IS0MYN.  (GB2RS)

**

THAT FINAL ITEM:  DUTCH STUDY SUGGESTS ISSUES ACCOMPANY 3G CELL STATIONS

And finally, can cellular telephones make you more alert?  Some researchers in the Netherlands think so.  Bill Pasternak, WA6ITF, has more:

--

A study by Dutch researchers has found some interesting side effects from certain cellular telephone base station radiation.  Initial results show that electromagnetic energy transmitted by base stations for the new third generation or 3 G wireless networks caused subjects in double-blind test groups to experience tingling sensations, get headaches and have feelings of nausea.  On the other hand, when the same subjects were exposed to signals from current mobile networks, no negative impacts were found.

But here's the kicker.  When the same people were exposed to both types of fields -- that being 3 G plus current networks -- cognitive functions including memory and response times showed measurable improvement.  Put simply, the subjects became more alert when exposed to both fields. The report did not discuss the modulation schemes nor the specific RF power densities that were involved in the study, and obviously allot more research needs to be done before anything conclusive can be known.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF

--

Now it has to be pointed out that these are early results. As such, while they are interesting, are yet to be confirmed. You can read more in cyberspace at www.msnbc.com/news/974005.asp (CGC)

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm). Maybe there's an intermittent connection that's worsened by the
heat of the sun (when heated, most metals tend to expand. This might
be partially loosening a connection to, or even within, the antenna,
causing the signal to weaken).

Thank you for the feedback on this issue. Here are some more discoveries:

The power supply for this radio is a 175 watt inverter powered from a 12 volt battery, which in turn is charged by a set of solar panels, the charge from which is regulated by a Morningstar Sunsaver charge controller. If I unplug the radio from the inverter and plug into the regular power supply from the grid, the noisy signal becomes clear. Additionally, after I unplug from the inverter, for a second or so as the fields in the system die down the signal becomes clear before the radio stops working.

This seems to indicate that the antenna is ok, and that the interference is in the solar system somewhere, but not the inverter (otherwise the night time reception would be bad) but perhaps the charge controller is having an effect on the Trisonic amplifier?

Table of contents:

Q01. What is "OTR"?
Q02. You haven't mentioned OTR music, why not?
Q03. Where can I buy recordings of old radio shows?
Q04. Which vendors have (lower prices) (higher quality) (faster response)?
Q05. Are OTR shows rebroadcast? If so, where and when?
Q06. I remember a great show called (x). When was it aired?
Q07. Are there any books about OTR?
Q08. Does anybody trade tapes of OTR shows?
Q09. What's this stuff about Copyright?
Q10. How can I get my local radio or TV station to broadcast OTR programming?
Q11. I have some old transcriptions and tapes, how can I make them sound better?
Q12. Are there any OTR clubs near me?
Q13. I have some OTR tapes of the same program, but their dates are different. Why?
Q14. Is there anywhere I can get a complete listing of all the episodes in a serial?
Q15. Is there anywhere I can get a written synopsis of the plots or themes of OTR programs?
Q16. Is there a World Wide Web page (URL) I can access for more info?
Q17. Is there an email newsletter on OTR? How do I subscribe to it?
Q18. What ever happened to the person that played [insert character] on [insert name of show]?
Q19. What is the best way to archive OTR programs?
Q20. My old reels squeak. Why does this happen, and can I fix it?
Q21. Where can I find more information about antique radios?
Q22. What is the best radio / antenna to get distant OTR stations?
Q23. Is there a group for modern radio drama ("new-time radio")?
Q24. I have only email access to the Net. Can I still get the files at your site?
Q25. I have never heard "Old Time Radio". Can I get an audio sample via Internet?
Q26. I have lots of loose OTR cassettes filling my drawers. Is there a better way to store these things?
Q27. (deleted)
Q28. I am interested in re-creating some OTR drama. Where can I get scripts?
Q29. I can hear what sounds like another program playing in the background on many of my OTR tapes. Is this due to the tuning on the

old radio or to the tape recorder that recorded the program?
Q30. Can I chat with other OTR fans on the internet?
Q31. (Deleted)
Q32. Is there an internet news group for old time radio?
Q33. OTR network shows were usually heard at\ the same local time, no matter what the time zone. How did they do this?
Q34. I'd like all the information there is about [insert name of OTR show]. Is there a FAQ that covers all the shows ever on the radio?
Q35. Is there any information on OTR conventions?
Q36. Are there any WWW Bulletin Boards where I can post OTR questions and read OTR information?
Q37. I would like to find recordings of [fill in rare OTR show name]. I have seen the show mentioned in Jay Hickerson's book, but haven't seen the show in any of the paper or on-line catalogs. How do I get this show?
Q38. I see a lot of OTR MP3s on the WWW. Are these worth collecting? How about the OTR CD-ROMs being offered on the WWW, are they worth the money?
Q39. Were any of the old-time radio personalities interviewed recently? Where can I find these interviews?
Q40. What MP3 player is best for OTR?
Q41. I keep reading/hearing about the LOC hoarding a bunch of unreleased OTR episodes. Is this true? How can I get them?
Q42. Where can I find OTR to download?
Q43. I bought some CDs with OTR MP3s. Some of the programs sound pretty bad. Why is this, and how can I make them sound better? If I make an audio CD from the MP3s, will it be better?

----------------------------------------------------------------------
Q01. What is "OTR"?

A01. OTR is an acronym for "Old Time Radio", a term loosely applied to radio programs broadcast from the dawn of broadcasting to the very early 1960s. Alternate names are "radio nostalgia", "golden age radio", etc. Usually this applies to radio drama, mystery stories, comedy and adventures. Some individuals classify the resurgence of this type of radio programming in the '60s and '70s as "Revival Radio", and similar programming since the '70s as "Modern Radio Drama". Purists even discriminate between the "Golden Age" (late '30s and the decade of the '40s) and the "Silver Age" ('50s). In any case, there are plenty of programs of various types that are enjoyable entertainment. Best of all, they don't require a large screen TV to enjoy 'em -- the "visuals" are provided by the listener's imagination.
----------------------------------------------------------------------

Q02. You haven't mentioned OTR music, why not?

A02. There was a good deal of big band, bluegrass, country and other music broadcast during this era. For some reason, there seems to be more current interest in the dramas rather than in the music. You will find much more discussion about this topic in alt.music.big-band or the various news groups specializing in music of various types.

Bluegrass fans might enjoy the Old Time Music on the Radio WWW pages. (They happen to use the same acronym, "OTR", but are not affiliated with The Original Old-Time Radio (OTR) pages). In addition, there is a Big Band and Other OTR Music BBS at www.old-time.com/otrbbss.html

---

Q03. Where can I buy recordings of old radio shows?

A03. There are several individuals and companies willing to sell tapes and CDs of OTR programs. A partial list can be obtained from the www.old-time.com site. Many public libraries have a small stock for perusal as well. Some vendors and collectors even have their own WWW pages.

---

Q04. Which vendors have (lower prices) (higher quality) (faster response)?

A04. Prices, quality and service differ somewhat among all vendors. Check with other OTR fans to learn of their experiences, then check with potential vendors.

Audio quality is an important consideration when purchasing recorded tapes. As yet, there is no "standardized" description of sound quality. Jim Widner and other OTR collectors have suggested various metrics to describe the quality of OTR recordings. Discussion of these standardized descriptors is summarized at the www.old-time.com site

---

Q05. Are OTR shows rebroadcast? If so, where and when?

A05. Yes, several AM and FM radio stations, satellite feeds, a shortwave station, and at least one Public Access TV station rebroadcast OTR. Check the Old-Time WWW page for current info. If you learn of other sources, leave a note!

For AM listening, try the National Radio Club's AM Radio Log, 17th Edition: Complete Listing of U.S. and Canada AM Radio Stations (Mannsville, N.Y.: NRC, 1997). All AM stations carrying things like "Old Time Radio" are listed with the format code NOS (Nostalgia), and there are lots of other codes. [Order from NRC Publications, Box 164, Mannsville NY 13661-0164 USA. Price is: $22.95 post paid]

For FM listening, try Bruce F. Elving's FM Atlas (Esko, MN: FM Atlas Pub., 1993). Alongside lists, this has maps of your area and its stations as well. [Order from Bruce Elving, PO Box 336, Esko MN 55733-0336. Price Range: $11.00 + approx. $1.00 s/h]

The M Street Radio Directory, M Street at +1 615-251-1525 voice, or +1 615-251-8798 FAX. The address is M Street Corp., PO Box 23150 Nashville, TN 37202 The price for the 8th edition is $65.00 plus S&H

---

Q06. I remember a great show called (x). When was it aired?

A06. If the show was heard nationwide, look through the program databases / logs at the Old-Time site or at Jerry Haendiges' site (see answer A14 below). If the show was only on local radio, you will have more difficulty in finding an answer. Checking with your local radio stations is probably the best bet.

----------------------------------------------------------------------

Q07. Are there any books about OTR?

A07. Yes, there are many books related to OTR. See the www.old-time.com site for a bibliography of several hundred books. There is also a page where you can read or enter critiques or reviews of various books on OTR.

Jim Widner and Everett L. Slosman left this address for a bookstore specializing in OTR books:

Rainy Day Books
P.O. Box 775, Rt. 119
Fitzwilliam, NH 03447
(603)585-3448

Bob Crump reminded us that most good used book stores will do a nationwide search for a title, if given enough time. Henry Brugsch related a good experience with the following on-line bookstore:

Acorn Books acornbks@netcom.com

There are also several "book finding" services that will help obtain old/out of print books for a fee.

----------------------------------------------------------------------

Q08. Does anybody trade tapes of OTR shows?

A08. Yes. Check with the various on-line OTR services. Leave a note in the OTR Digest, alt.radio.oldtime, or Ray Plumlee's OTR Traders BBS at http://otr-trader.com/ Remember to observe copyright laws!

----------------------------------------------------------------------

Q09. What's this stuff about Copyright?

A9. The copyrights on some OTR shows have expired. Several copyrights have been renewed, and some may have fallen under "common law" copyright (even though they were not originally copyrighted). 1970s era Berne Convention agreements further cloud the issue for non-lawyers. See the Old-Time WWW site for the latest "common sense" and legal citations.

A concise answer was given by 'A. Joseph Ross' (lawyer@world.std.com) (used with his permission):

> Just to get a little perspective in this controversy, copyrights do expire. Under the old copyright law, a copyright was good for 28 years from the date of first publication, renewable for another 28 years, for a total of 56. Under the 1976 act, those copyrights were extended to 75 years, provided they were renewed. Copyrights under the new law, which took effect on 1 January 1978, are good for the life of the author plus 50 years. Copyrights on anonymous works, works made for hire, etc. are good for 75 years after first publication.
>
> So, since otr has just barely been around for 75 years, little or none of it is in the public domain yet by reason of having been around for a long time. The question of what constitutes publication, and the fact that sound recordings could not be independently copyrighted until the new law took effect add additional complications.

----------------------------------------------------------------------

Q10. How can I get my local radio or TV station to broadcast OTR programming?

A10. Call the station and tell them of the many people who like to listen to OTR. Suggest this programming will increase the number of listeners and help buy things from their advertisers.

Shawn Fulper-Smith (shawnf@cc1.uca.edu), a managing director of a non-commercial station, tells us:

> The days of radio being ruled by the artisans is over, and for some time now it has been in the hands of people who only look at the bottom line, so to reach them you must talk through public radio pledges, or through sponsors on commercial stations.

Don Fisher (dfisher@sover.net) has been successful in getting his local Public Access TV station to rebroadcast OTR. In fact, Don is the MC of the program. Contact him for hints on how to get your Public Access TV station to do something similar.

Elizabeth McLeod (lizmcl@midcoast.com), who has spent more than 15 years working in local radio, gave the following advice:

> I can tell you that one phone call from a listener means absolutely nothing to a program director. PD's are totally under the thumbs of their General Managers -- and GMs, in turn, base their decisions EXCLUSIVELY on sales issues. It doesn't matter how many people want to hear something -- if the GM doesn't think he can sell it, if the GM doesn't

think it'll bring hard cash into the station, it won't get on the air. Period.

The only reason a commercial station exists is to make money for its owners. ALL decisions at the station, be they about programming or anything else, are made with this in mind.

Don't bother to approach the station itself, APPROACH THE STATION'S ADVERTISERS!!!

Listen to the station and figure out who its biggest sponsors are. Generally, they'll be local banks, car dealers, insurance agencies, and appliance retailers. Do you know anyone connected with these advertisers? Then approach these people. Tell them you've heard their ads on such and such a station, and that you think a lot of people would be interested in hearing OTR, and that advertising on an OTR series might be a good strategy. And get your friends to do the same. And be persistent! In other words, SELL THEM ON THE IDEA!

You need to keep in mind that some types of stations are more likely to air OTR than others. If your local station is has a firmly-defined format, you are probably "S-O-L," as the saying goes. They won't break format, no matter what. On the other hand, if you have a local non-commercial community-type station, way up on the left side of the FM dial, you may have a very good chance of success.

---

Q11. I have some old transcriptions and tapes, how can I make them sound better?

A11. You might try using a good equalizer and/or digital signal processing (DSP) unit between the playback and recording devices. Some people have mentioned that the Radio Shack DSP unit does a fair job. There are also other, more expensive DSP units available from Ham radio stores and audio stores. Some subscribers have attested to the efficacy of the Timewave brand of DSP units.

There are several computer programs available to convert analog sounds (as on a tape) to a digital format (e.g. WAV file). Some of these computer programs also have noise reduction, filtering and enhancement capabilities. In many cases, application of digital technology will improve the sound of a noisy or deteriorating analog tape. There is a problem, however, if the digitized rendition is re-recorded to tape, and subsequently re-digitized for further treatment. Since digitization is a sampling technique, sampling a sample can result in extremely degraded sound patterns.

A very nice program that will convert analog material to digital format is Audiotools by Andrew Fish. For more information on this software, visit the Audiotools BBS at www.old-time.com/otrbbss.html or Andrew's site at http://www.unrelatedinventions.com/Audiotools/

From: hhoward@mindspring.com (Henry Howard)

> For cassette machines (and reel to reels for that matter) occasionally take a "Y" cord and connect the output of your cassette player to both "sides" of the "Y". Plug the combined side of the "Y" into your stereo. If the sound is mush(ier) than what you hear normally, you have a head alignment problem (assuming that the tape you are listening to was properly aligned.)

From: Ron_B._Hare@livewire.com (Ron B. Hare)

> Dolby HX on the recording deck makes an audible difference. Other audio optimization features are of negligible value for OTR. Dolby HX also requires no playback decoder.

[Dolby HX uses or "preserves" the Dolby noise reduction method of the master tape when duplicating - ed.]

---

Q12. Are there any OTR clubs near me?

A12. Check the club listings in the Old-Time WWW page, and leave a note in one of the on-line OTR groups asking about local clubs for your area. If you find a club that is not listed at www.old-time.com, ask a club officer to send a note to the webmaster with particulars about the club.

---

Q13. I have some OTR tapes of the same program, but their dates are different. Why?

A13. Sometimes broadcasts are dated according to their original broadcast date, and sometimes according to a date on which they have been rebroadcast. For instance, the Armed Forces Radio Service rebroadcast many Mutual Radio transcriptions at a later date. Your tape may be of one of these later dates. Alternately, somebody might have made a mis-typopgoof.

Finally, some shows -were- broadcast more than once, and sometimes on different programs! For instance, a few Suspense shows were re-scripted / re-cast for Escape. You might also find similarities between certain SF shows as done on X Minus 1 and Dimension X.

---

Q14. Is there any place where I can get a complete listing of all the episodes in a particular program series?

A14. Some on-line OTR collectors have contributed Program Logs for several well-known series. The logs are available at www.old-time.com/otrlogs/ . While you are logged in at that site, check the "Humongous OTR Database" (a database of contributed catalogs and libraries), which is searchable with your WWW browser.

The "logs and publications" entry at the Old-Time WWW site gives names and addresses of several vendors of these items (thanks to RadioJoe5@aol.com (Joe Coleman) and others).

Jerry Haendiges maintains a VERY complete set of OTR program logs, at his Vintage Radio Place: (http://www.otrsite.com/radiolog )

Jay Hickerson maintains several logs and lists, as well as -Hello Again-, an OTR newsletter. Jay is the author of The Ultimate History of Network Radio Programming and Guide to All Circulating Shows. You can see more info at http://www.old-time.com/sponsors/hickerson.html

Jay's address is:

Jay Hickerson          JayHick@aol.com
Box 4321
Hamden, CT  06514
(203) 248-2887         FAX (203) 281-1322

---

Q15. Is there any place where I can get a written synopsis of the plots or themes of OTR programs?

A15. Again, some vendors include this information with their catalogs. If you would like to contribute your interpretations of OTR plots or themes, send them to the on-line OTR services or to webmaster@old-time.com for inclusion in one of the databases.

Jim Widner and others have contributed some synopses / introductions to various programs. They are on file at http://www.otr.com and http://www.old-time.com.

Also check Frank Passage's logs at the old-time WWW site; most contain a short synopsis of the program.

Many of Jerry Haendiges' logs contain excellent summaries of not only the program series, but of each episode as well.

Many of the local and national OTR clubs maintain informational libraries with this material.

---

Q16. Is there a World Wide Web page (URL) that I can access for more information?

A16. Yes, there are several WWW sites. Each site contains different

information, so you might want to visit them all. The major OTR WWW sites all have links or pointers to each other, so you can explore many topical areas within old time radio. Good places to start exploring are:
www.old-time.com
or www.otr.com
or www.otrsite.com

An excellent database of OTR-related WWW sites, with an explanation of the contents of each is at
www.otr.com/cgi-bin/cgiwrap/otr/db.cgi?uid=default

---

Q17. Is there an email newsletter on OTR? How do I subscribe to it?

A17. Several newsletters currently exist. Here his how to get the best:

The Old-Time Radio Digest (AKA "Internet OTR Digest") is a very popular and freely available electronic newsletter, delivered nightly. Its purpose is to foster general discussions about the hobby of collecting, preserving and listening to OTR. To subscribe, send an email

TO: old.time.radio-request@oldradio.net
SUBJECT: subscribe
(The body of the message is ignored)

---

Q18. What ever happened to the person that played [insert character] on [insert name of show]?

A18. Check the "Personality Pages" at www.old-time.com for home pages of several well-known OTR personalities. Also check the Where Are They Now pages at www.440int.com.

---

Q19. What is the best way to archive OTR programs?

A19. The most popular way seemed to be reel-reel tapes, using each of the four tracks to record monophonically. Modern reel machines are in the > $2,000 range, and used open reel machines are becoming harder to find.

Purists claim open reel tapes are best stored "tails out", in which the tape is played (not fast-forwarded) onto the take-up reel. This method of storage makes "print through" of the magnetic sound image a little less noticeable because the "echo" will come before the louder sound that caused it, and be somewhat masked by the louder sound.

Cassettes are generally fine for portability / ease of use / exchange, but they suffer from several problems when used as a long-term storage medium. These problems include "overwinding" and splitting of the tape at the leader. Because of their thinner track width and slower speed (1 7/8 IPS), the density of the information is greater than with wider and faster (3 3/4 IPS or 7 1/2 IPS) reel tapes. This leads to a greater loss of signal (particularly high frequencies) over time.

The Hi-Fi VHS tape is gaining in popularity because of its six-hour storage capability and relatively robust mechanical construction. "Hi-Fi" decks need no video signal to synch the systems, and can thus record audio without an accompanying video signal. One T-120 Stereo Hi-Fi VHS cassette can easily hold 12 hours of OTR audio (recorded monophonically on the right and left channels independently). If the linear track can be accessed independently, this will add six more hours of recording time. There is very little fidelity loss when using this medium to duplicate programs.

Conrad Trautmann (CONRADTRAUT@delphi.com) left this note in response to a query about finding used reel-reel machines:

> You can also call Harris/Allied used equipment division at 1-800-622-0022 or call Radio World magazine at 703-998-7600 for subscription information. Radio World is an industry trade and has used equipment listings in the classifieds once a month.

(Jim Blackie [jblackie@aol.com] indicates that the Harris/Allied number has changed to: 1-800-300-0733.)

From: andy@vintagebroadcasts.com (Andy Blatt)

> I wholeheartedly recommend Play It Again, Sam of Lakewood, Ohio.  They also sell used Pioneer reel decks with a warranty and accept major credit cards for repair or used machines.  The address is 12611 Madison Avenue in Lakewood, Ohio 44107.  The phone number (no answering machine, no fax machine) is 216-228-7330.  As far as pitch control cassette decks, Marantz offers several one of which is the three-head portable PMD-430.

[Play It Again Sam has a WWW page at www.playitagainsam.com - ed]

Richard Novak (rnovak@ix.netcom.com) wrote this informative note on using Hi-Fi VHS as an archival medium:

> To clear up any misunderstandings concerning VHS HiFi machines and their ability to record audio, I offer the following..
>
> It should be understood that what distinguishes a HiFi machine from a linear machine is that the audio track is recorded helically (diagonally) on the tape along with the video track. On linear machines the audio is recorded at the upper edge of the tape (and a control track at the lower edge, if anyone wonders what the extra head is for.)

> On a HiFi VHS the audio is not recorded as an analog signal as would be the case with linear recording. Instead the analog audio signal frequency-modulates a carrier which is then recorded between the video tracks. A duplicate signal is also recorded linearly to maintain compatibility with linear VCRs. The FM signal recorded on the HiFi track should not be confused with FM radio broadcasts. One of my customers thought the FM switch on his HiFi was for recording FM from the radio. Today's machines no longer use the label "FM", instead use "HiFi". Less confusing.
>
> The sound recorded from FM radio broadcasts (or any other source) onto HiFi VCRs is virtually indistinguishable from the source. The material can be dubbed to cassette with no generation loss.
>
> There is no difference in audio quality using either six hour or two hour mode.
>
> It is true that at slower speeds the diagonal tracks are closer together. This does degrade the video signal as anyone knows who has compared six hour video with two hour video. But does not degrade the FM carrier with the audio track.
>
> The tape writing speed of the audio track in HiFi mode is the same regardless of linear speed. This is because the head speed remains constant and is independent of the linear tape speed.
>
> Worked it out once and it is around seven meters per second. Whatever it is, it's a whole bunch faster than 7 1/2 inches per second. If anyone really wants to know the writing speed, it is the circumference of the upper cylinder (or video head) multiplied by the rotational speed which is 30 revolutions per second, or 1800 revolutions per minute. (Two heads 180 degrees apart at thirty rps results in 60 frames per second.)
>
> Who cares how it works.. The point is that VHS HiFi is the best and cheapest medium around for recording masters. But not for archiving. Most experts still agree that reel to reel is the best and most reliable method of archiving. (Sticky shed syndrome from the 70s notwithstanding.)

Although Bob Burnham does not like dubbing (two-well) cassette decks for producing highest-quality cassette tapes, he does have a few recommendations:

> One of the BEST dubbing decks (if you must use one) is made by Denon. Both sides can record at the same time and both sides have pitch control, and both sides have

> separate output jacks for connecting to other equipment.... almost like TWO (click) TWO (click) TWO DECKS in one.  Tascam (Teac's pro division) also recently introduced their model 303 double deck. If it's anything like the 202 MKII, it's probably not worth it. You pay a high price for the name, but still basically consumer grade inside and lots of plastic.  Denon is better.
>
> I mentioned Kingdom Tapes in Mansfield, PA as a good source for cassette copiers, and equipment servicing. All the duplicators I have in use today came from this company.  They have all the major brands (plus their own house brand), also tape decks, blank cassettes, etc. Great service (same day usually available).  They'll beat anyone's price on cassette dubbers. 800-788-1122.  Fax is 717-662-3875.
>
> Bob Burnham / BRC Productions / P.O. Box 2645 / Livonia, MI 48151 platecap@gatecom.com / platecap@eworld.com

Several hobbyists are now investigating the utility of using CD-ROM or MiniDisks for archival purposes. CD-ROMs can hold hundreds of hours of program material, but at the cost of time-consuming conversion from analog to digital representations. Selection of appropriate encoding and compression technologies is extremely important to prevent digital artifacts. MP3 (MPEG III) compression seems to be more favored than is RealAudio(R) compression.

---

Q20. My old reels squeak. Why does this happen, and can I fix it?

A20. There are at least two causes for "squeaky reels" on a reel-reel tape recorder. (1) The tape edge may be rubbing against the rim of a distorted take-up reel, or (2) the oxide may be sticking to your erase (or other) heads. If the former, the least frustrating alternative is probably a new take-up reel. If the latter, Fred Korb left this note:

> If you have any squeaky reels that you would like to recover, I will be glad to send you more information on how to do it. Just send me a stamped self addressed # 10 envelope and I will respond. Send your request to: Fred Korb, c/o Oldtime Radio Collectors and Traders Society, 725 Cardigan Court, Naperville, Illinois 60565-1202. I am willing to help you preserve the sounds of radio days gone by.

[Editor's note: Fred's method consists of a kit by which a lubricating film can be automatically applied to the tape as it is played. I tried it. Although temporary, it does indeed work! I'd recommend it for those squeaky tapes that you wish to re-record onto newer reels.]

---

Richard Fish (lodeston@bluemarble.net) also left this helpful info about an alternative method:

> HYRDROLYZATION is the culprit.  The tape material -- the backing, or the binder compound used to stick the magnetic particles to the plastic backing -- has absorbed water from the air.  The water molecules actually make the tape expand a bit, so it doesn't fit the machined tape-guides properly anymore; and they can interfere with the lubrication impregnated into the tape; and it is theorized they can even interfere with the polished smoothness of the tape surface.
>
> WHY SOME TAPES AND NOT OTHERS?  It depends on the formulation of the plastic backing and binder.  In the mid-70s, both 3M (Scotch) and Ampex, the two major tape manufacturers, started experimenting with their formulas. They thought they were introducing major improvements, but instead created a tape much more prone to hydrolization than anything had ever been. The problem did not show up for years, and the formulas did not get corrected until sometime in the mid-'80s. Theoretically any tape could get hydrolyzed over a long period of time, especially if stored in a high-humidity situation, but in practice most squeaky tapes were made (roughly speaking) between 1975 and 1985.
>
> WHAT'S THE FIX?  Tom Lopez at ZBS (the most prolific and entreprenurially successful producer of radio drama in the US today) gave me his formula and I've done it many times now and it works:
>
> Bake the tapes in a convection oven for 8 hours at 130 degrees Fahrenheit.  It is entirely possible to bake a tape twice if the first time doesn't do the trick. You get about a three-week "window", sez Tom, before the tape starts to re-absorb water.  So the best deal is to bake the tape and immediately make a copy.  But if you forget to do it and it re-hydrolyzes, you can bake it again.

---

Q21. Where can I find more information about antique radios?

A21. An excellent place for discussions about antique radios, phonographs and accessories is the rec.antiques.radio+phono news group, created by Bill Robie. A pointer to his FAQ may also be found at http://www.old-time.com. Basically, r.a.r+p

- Is a *discussion* group, rather than a sales group (see r.a.m) - Focuses on radios, phonos, and related materials made before the 60s - Avoids "ham" radio gear (the Boat Anchors group covers that) - Has a -very- comprehensive FAQ that new folks should read

The University of Maryland has a WWW site entitled "Broadcast Pioneers' Library". This is an excellent resource for the serious / professional researcher. It can be accessed through the old-time WWW site, or directly via the URL: http://www.lib.umd.edu/UMCP/LAB/

Additional sites with pictures of old radios or other hardware resources may also be found at http://www.old-time.com

---

Q22. What is the best radio / antenna to get distant OTR stations?

A22. Several readers have been acclaiming the GE SuperRadio III as an excellent choice for picking up distant AM stations that carry OTR programming. Although the tuning dial has notoriously poor calibration, the sensitivity and selectivity seem superior to other radios.

Some readers have had good success with the Select-A-Tenna antenna advertised in several magazines, and the Grove Catalog. The S-A-T seems to be rather directional, and may eliminate off-axis interference.

Ham Radio magazines sometimes carry information about small loop antennas for AM DX-ing. Some pointers to instructions on how to build them are at http://www.old-time.com. Also, Dan Hughes (dan@soltec.net) left this note:

> Several years ago one of the electronic magazines ran plans with dimensions and number of turns, etc to build one of these antennas. I have built several and I'm no mechanic. If you (or anyone else reading this) would like a copy of the article and plans, visit my website at http://members.soltec.net/~dan

---

If you are interested in AM Broadcast Band reception, and technical articles related thereto, send a SASE to the following address for their product catalog:

National Radio Club
Publications Center
PO Box 164
Mannsville, NY 13667-0164

(The National Radio Club also has a WWW page, at www.nrcdxas.org/)

---

Q23. Is there a group for modern radio drama ("new-time radio")?

A23. There are several USENET groups whose charters include modern drama. Check the lists on your local Internet provider to see which are available to you.

Here is a list of some of the WWW sites for modern audio drama:

```
    Jim French Productions (Imagination Theatre):
         http://jimfrenchproductions.com/
    Atlanta Radio Theatre Company:
         http://www.artc.org
    ZBS Media:
         http://www.zbs.org/zbs.html
    LodesTone Productions:
         http://www.bluemarble.net/lodeston/lode.html
    Midwest Radio Theatre Workshop:
         http://www.mrtw.org/mrtw
```

---

Q24. I have only email access to the Net. Can I still get the files at your site?

A24. Maybe. WWW pages can be retrieved by email. Get the following file for more information:

Accessing The Internet By E-Mail
Doctor Bob's Guide to Offline Internet Access

This document is now available from several automated mail servers.

To get the latest edition, send e-mail to one of the addresses below.

```
    To: mail-server@rtfm.mit.edu (for US, Canada & South America)
    Enter only this line in the BODY of the note:
    send usenet/news.answers/internet-services/access-via-email

    To: mailbase@mailbase.ac.uk (for Europe, Asia, etc.)
    Enter only this line in the BODY of the note:
    send lis-iis e-access-inet.txt
```

Since the OTR FAQ is an "official" FAQ, a copy of it is stored at MIT, and is available from the MIT mailserver. For more info on how to get files by email from MIT, send a message

```
     TO: mail-server@rtfm.mit.edu
     SUBJECT: [blank]
     BODY:
          help
          end
```

---

Q25. I have never heard "Old Time Radio". Can I get an audio sample via Internet?

A25. Yes, if you have a suitable WWW browser and sound card. Connect to any of the WWW sites mentioned above, and follow the pointers to their audio clips and / or soundbytes. Many of the soundbytes can be downloaded, and played on your computer's sound card, others will play "realtime" through your multimedia system. There is also a news group, alt.binaries.sounds.radio.oldtime, that tries to transfer OTR shows (news groups are notoriously inefficient at transferring large binary files, however).

You can select from many moderate-length soundbytes at Jerry Haendiges' Preview Listening Lounge at
www.otrsite.com/ra/preview.html

---

Q26. I have lots of loose OTR cassettes filling my drawers. Is there a better way to store these things?

A26. Collectors with lots of cassettes seem to use just about everything from "underbed cardboard storage boxes" to old soft drink cases. If you want your collection to have a more "professional" look, here is a note from Ron_B._Hare@livewire.com (Ron B. Hare)

> You almost need to buy cassette albums from specialty suppliers. Radio Shack used to carry a small line of these and charged too much. We are in the recording studio business, and receive catalogs from several sources. The one I like best has some of the lowest prices and unhesitatingly deals with individuals and will take your credit card number over the phone for instant shipment (in contrast to some who require account setup, purchase orders, prepayment, cash and other nuisances).
>
> They have two catalogs: one for audio and one for video. Cassette albums are available in a large number of different styles, sizes and capacities. The 8-cassette albums I use are CPCN.4+4M/WHT in white and CPCN.4+4M/RBLU in royal blue. Outside dimensions are 9 7/8 x 7 x 1 1/4 wide, so they fit well on a bookshelf. This model also seems to cost less per cassette than any of the other models, though logic might lead you to the conclusion that the larger capacity ones would cost less.

[Polyline has a website at www.polylinecorp.com, and their new address and phone number are:

Polyline Corporation
1401 Estes Ave.
Elk Grove Village, IL 60007]

---

(Q27. deleted)

---

Q28. I am interested in re-creating some OTR drama. Where can I get scripts?

A28. Check your local or national OTR clubs. Many have a "print library" that includes scripts. You can also point your browser at the University of Maryland's script page, at www.lib.umd.edu/UMCP/LAB/scripts.html

Jack French (OTRpiano@erols.com) said:

> One excellent source is the book. "One Hundred Non-Royalty Radio Plays" compiled by William Kozlenko, Greenberg Publ of NYC 1941. It's certainly out of print now, but many libraries would have a copy. I bought mine at a used book store a few years ago. The 100 radio plays in the book include adventure, mystery, fantasy, comedy and historical. Most were originally produced on educational stations in the 30s. Authors include Saroyan, Julian, and Liss.

Larry Groebe, of the Generic Radio Workshop, has several pages dedicated to on-line OTR scripts at http://www.genericradio.com

---

Q29. I can hear what sounds like another program playing in the background on many of my OTR tapes. Is this due to the tuning on the old radio or to the tape recorder that recorded the program?

A29. In addition to the old radio being mistuned, similar problems can be caused by one or more of the tape recorders used before you received your copy of the program. Print-through has already been mentioned in Q & A 19. Bob Burnham has a nice explanation of two more problems: crosstalk and channel leakage.

> Crosstalk and Channel Leakage are 2 different things. OTR collectors seem to have the most problem with channel leakage.
>
> When you hear another program faintly playing in the background in normal direction, this is usually Channel Leakage. This is a leftover problem from the 1970s & early '80s when most collectors traded on open reel tapes which were quarter-track mono -- there were different (separate) programs on left & right channels. This allowed 6 hours of shows to be placed on one reel. Unfortunately, many collectors would duplicate L & R shows simultaneously. Depending on the quality of the equipment (and its condition) it was common for one program to bleed into the opposite channel...especially if the collector was careless and allowed over-modulation.
>
> Crosstalk results when a tape is recorded (or played back) on a machine with mis-aligned tape heads. It can also occur when trying to record over a 1/2 track recording with a 1/4 track machine with dirty or

mis-aligned erase head. You usually will hear another program playing IN REVERSE in the background.

HOW TO PREVENT CHANNEL LEAKAGE AND CROSSTALK...

If duplicating quarter track reels, copy ONE channel or track at a time. As for crosstalk, make certain your machines are kept in proper alignment. Use a high quality BULK ERASER if you re-use old tapes... this is especially true for those who use reels.

Sorry, there is NOTHING you can do to remove these flaws once they are there.

---

Q30. Can I chat with other OTR fans on the internet?

A30. Yes. Lois Culver (lois@chatlink.com) and other OTR fans meet every Thursday at 8:00 PM Eastern time, on Channel #OldRadio, on the StarLink-IRC. If you are unfamiliar with Internet Relay Chat, please get software and instructions from your favorite Internet Service Provider or shareware/freeware software site, or connect to www.old-time.com/irc.html for basic instructions.

---

(Q31. Deleted)

---

Q32. Is there an internet news group for old time radio?

A32. Yes. alt.radio.oldtime is available via some news servers. Since many news servers ignore alt.groups, you may need to contact your ISP to get that news group listed locally. See www.old-time.com/newsgroups.html for more information. Also try www.groups.google.com to sample some of the messages.

---

Q33. OTR network shows were usually heard at the same local time, no matter what the time zone. How did they do this?

A33. Two ways: Many networks used telephone lines to carry the show from the studio to transmitter sites. The show was done live at least twice - once for the East coast, once for the West. After Bing Crosby spearheaded the introduction of recorded shows (about 1948), the East coast show was recorded for later telephone transmission to the West coast.

---

Q34. I'd like all the information there is about [insert name of OTR show]. Is there a FAQ that covers all the shows ever on the radio?

A34. No. There are many books (Remember them? They have words printed on pieces of processed dead tree) written about what we now call

"OTR". See answers A7 and A37. If you would like to contribute an original article about one or more facets of OTR, many of the webmasters of on-line OTR sites would be happy to consider archiving it.

---

Q35. Is there any information on OTR conventions?

A35. Yes. There are several. Here are some of the larger ones:
  * Annual OTR and Nostalgia Convention in Cincinnati, OH (April)
  * Radio Classics Live, Brockton MA (May)
  * Annual Lum and Abner Society Convention (June)
  * REPS Radio Showcase (June)
  * Friends of Old-Time Radio (October)
  * SPERDVAC (November)

See the convention page at www.old-time.com for specific dates and contact person info.

---

Q36. Are there any WWW Bulletin Boards where I can post OTR questions and read OTR information?

A36. Yes. Try Old Time Radio Bulletin Boards at www.old-time.com/otrbbss.html. That page contains a list of several old-time radio oriented WWW bulletin boards. You can also access OTR message boards at http://www.lofcom.com/nostalgia/phorums/

---

Q37. I would like to find recordings of [fill in rare OTR show name]. I have seen the show mentioned in Jay Hickerson's book, but haven't seen the show in any of the paper or on-line catalogs. How do I get this show?

A37. Jack French, an expert on old-time radio and editor of Radio Recall, gives us this information:

> There's good news and bad news....the good news is if Jay's compendium says they are in circulation, somebody has them. The bad news is there is no guarantee you'll find them. Let's start at the beginning. If they're in Jay's book, and there is either the initials of a dealer, log preparer, or collector with that entry, the assumption is that person has some or maybe most. If the entry is devoid of such, we push on. Few dealers list rare shows in catalogs since so few people want to buy them. Generally the catalog represents a small part of a dealer's or collector's total holdings. There are at least forty OTR dealers in the country so you can contact each one with a specific inquiry. Most collectors belong to at least one OTR club. There are about 20 clubs. Most will publish your request in their newsletter for little or no cost. Most of the members of

> OTR clubs are not on-line so this is the only way to reach them. There are over 25 state and college archives that may have the shows. Most have no catalog but will answer any reasonable inquiry. Contact them all. All of the contact addresses for OTR clubs, pubs, dealers, and archives are contained in NARA OTR Source List. Contact me separately if you're interested in this low-cost research aid.

---

Q38. I see a lot of OTR MP3s on the WWW. Are these worth collecting? How about the OTR CD-ROMs being offered on the WWW, are they worth the money?

A38. Just as with home made recordings of any type, the quality of OTR MP3s varies considerably. Some of the online MP3s may have been converted from low sample rate RealAudio(tm) files, others might have been "ripped" from low-generation masters. Most CD-ROMs for sale on the WWW were recorded using these varying-quality MP3s. In other words, the MP3s in themselves are "collectable" only for the enjoyment one might get from listening or further trading. They have little intrinsic value, and are of unknown quality. It might help to associate your estimate of quality with the provider's name, to attempt to predict quality and avoid long downloads of poorly prepared material.

Another point to remember - some OTR is still under copyright protection. Please observe applicable copyright laws.

---

Q39. Were any of the old-time radio personalities interviewed recently? Where can I find these interviews?

A39. A large number of OTR personalities were interviewed by the author John Dunning. Stewart Wright, Editor of the RHAC Newsletter gave us the following information. (You can learn more about RHAC by checking their page at http://www.old-time.com/sponsors/rhac.html)

> The Radio Historical Association of Colorado (RHAC) has tapes of many OTR personalities interviews that were conducted by John Dunning in the 1980's. Several Radio personalities such as Elliot Lewis were interviewed more than once. The following is a fairly complete list of the Dunning interviews in the RHAC library.
>
> Steve Allen, Elvia Allman, Eve Arden, Hy Averback, Parley Baer, Parley Baer and Georgia Ellis, Parley Baer and Sam Edwards, Parley Baer and Whitfield Conner, Bill Baldwin, George Balzer, Harry Bartell, Andre Baruch and Bea Wain, Court Benson & Grace Matthews, Bernice Berwin, Mel Blanc, Ray Bradbury, Curley Bradley, Frank Bresee, Candy Candido, Hal Cantor, Charles Collingwood, Whitfield Conner & Haila Stodd, Whitfield Conner and Parley Baer, Whitfield Conner and Virginia Greeg, Norman Corwin, Mary Jane Croft, D Day Program J Macvane & Lar, Dennis Day,

Rosemary De Camp, John Dehner, Kenny Delmar, Jerry Devine, Howard Duff and Dick Joy, Richard Durham, Ruth Duskin Feldman, Sam Edwards, Sam Edwards and Janet Waldo, Alice Faye, George Fenneman, Morton Fine, Al Flanagan and Dick Mcdaniel, Paul Frees, Fred Friendly, Alice Frost, Art Gilmore, Roberta Goodwin (Bob Bailey's Daughter), Gale Gordon, Virginia Gregg, Virginia Gregg and Whitfield Conner, Phil Harris, Clarence Hartzell, Dennis Horseford, John Houseman, Bill Idelson, Raymond Johnson, Jack Johnstone, Jim Jordan, Dick Joy, Roland Kibbee, Sheldon Leonard, Phil Leslie, Larry Lesueur, Elliot Lewis, John Macvane, Fletcher Markle, Fletcher Markle, Grace Matthews & Court Benson, Dick McDaniel and Al Flanagan, Dick McDaniels and Pete Smythe, Marvin Miller, Shirley Mitchell, Carlton E Morris, Morris Kaplan, Frank Nelson, E Jack Neuman, Nelson Olmstead, Vic Perrin, Michael Raffetto, William N Robson, Eric Sevareid, Anne Seymour, William L. Shirer, Penny Singleton, Pete Smythe Collegiate Band, Olan Soule, Berne Surrey, Glenhall Taylor, Irene Tedrow, Cliff Thorsness, Les Tremayne, Lurene Tuttle, Veola Vonn, Janet Waldo, Gertrude Warner, Peggy Webber, Anne Whitfield, and Dr. Paul Winchell.

The Radio Enthusiasts of Puget Sound (REPS) also has interview tapes of many Old-Time Radio personalities. Most of these interviews have been conducted in the 1990's. Personalities include:

John Archer, Harry Bartell, Frank Buxton, Chris Conrad (Son of William Conrad), William Conrad, William Conrad & George Walsh, Stewart Conway, Norman Corwin, Sam Edwards, Herb Ellis, Charlie Flynn, Jim French, Sandra Gould, Burl Ives, Peggy Jordan (Granddaughter of Jim & Marian Jordan), Merrill Mael, Jo Anna March, Les Tremayne, Janet Waldo, Anne Whitfield Phillips, Rhoda Williams, and Douglas Young.

The REPS web site is located at:
http://www.homestead.com/repsonline/index.html

Yesterday USA on the Internet is doing a series of live interviews with OTR personalities about one every two weeks. They start at approximately 8 PM (ET) on alternate Sundays and are about 1 hour in length. The interviews are conducted by John or Larry Gassman. So far they have done Harry Bartell, Herb Ellis, and Conrad Binyon. Listeners can call in questions.

You can find out more information on upcoming interviews by going to the YUSA Home page at http://www.yesterdayusa.com/

---

Q40. What MP3 player is best for OTR?

A40. MP3s can be played on most computers, memory (RAM)-based players, hard-drive players, and CD-ROM based players. Each player has advantages and disadvantages. A chart comparing various CD-ROM players for OTR playback suitability is at www.old-time.com

---

Q41. I keep reading/hearing about the LOC hoarding a bunch of unreleased OTR episodes. Is this true? How can I get them?

A41. The Library of Congress (LOC) does indeed store copies of many old-time radio shows. Any qualified person can access this material, or even get copies. There are, however, some restrictions on its use. Elizabeth McLeod (lizmcl@midcoast.com), who has done much research in the area, gives us this information:

> LOC material may be listened to at no charge at the Library's Recorded Sound Reference Center by "qualified researchers" working on a project intended for public distribution -- from a full length book to an article for your local OTR newsletter. You cannot, however, make copies of the material due to the contractural and copyright restrictions which the Library is required by law to observe. (While the LOC preserves and houses the material, it doesn't own it.)
>
> It is possible, though, to obtain copies of the material from the LOC by going thru a process which is neither fast nor inexpensive. But if you have the patience and are willing to spend the money for material you can't get any other way, here is what you do:
>
> 1. Locate the specific item in the LOC's SONIC database, accessible from the Recorded Sound Reference Center Homepage, http://lcweb.loc.gov/rr/record/
>
> 2. Make note of the LOC Call Number and description of the item you need.
>
> 3. Phone, fax, or email the Recorded Sound Reference Center with the items you are requesting -- contact information is available on site. The Reference Librarian who handles these things is Brian Cornell.
>
> 4. The Library staff will determine what legal permissions will be required in order to copy the items you want, and will contact you with the names and addresses of the people who must be approached in order to get these clearances. If the item is from the NBC Collection, you will need to clear rights with their Intellectual Property Department in New York. Additional clearances may be required if the program is under a separate copyright.
>
> 5. You must write to the people specified and ask permission to have a copy made. It's a good idea to specify why you need the copy -- and don't just say "because Joe Blow is my favorite radio comedian." If you don't have a professional-sounding reason, make one up.

6. Wait to hear back from the Legal Entities. If you've written to NBC Intellectual Property, you will get a letter back from them in about four weeks. Two copies of a legal contract will be enclosed, specifying what you may and may not do with the recording. Sign both copies, and send one of them back to NBC.

7. NBC will advise the LOC that it has granted permission, and in about three weeks you will get back a requisition form from the Library's Phonoduplication Lab. You'll need to check it over, sign where specified, and send one copy back to them with your check for the lab fee -- which starts at $86 per hour, not including the cost of tape stock. Then, fax the other copy of the form, and a photocopy of your check to the lab, and they'll begin processing your duplication request. (Yes, the fee is outrageous -- but there are worse places to spend your money than with the entity which has done more for the physical preservation of broadcasting history than any other organization in the United States....)

8. In about four weeks, FedEx will deliver your tape. Needless to say, you may not make any commercial use of the recording in whole or in part -- and you had to sign a contract to that effect in order to get access to it. Commercial permissions are a whole separate case.

Like I said, this is not for everyone -- but if you're working on a serious project, it can be a valuable resource for getting access to material that simply isn't available anywhere else and which is unlikely ever to be released on the commercial market.

Elizabeth

---

Q42. Where can I find OTR to download?

A42. The number and location of FTP sites that provide OTR changes more rapidly than does this FAQ. Your best bet is to check the backissues of the various alt.binaries.sound(s).radio.oldtime groups on USENET.

Hint: point your browser to www.groups.google.com and try your search from there

---

Q43. I bought some CDs with OTR MP3s. Some of the programs sound pretty bad. Why is this, and how can I make them sound better? If I make an audio CD from the MP3s, will it be better?

A43. Wow. The answer to that question could fill a whole FAQ by itself. I'll try to keep it short.

Poor-sounding audio can be due to several causes. The audio on the tape from which the MP3 was made could have been poor, or the person that converted the analog audio to digital audio could have done a bad job. The statement: "remastered to digital audio" doesn't mean much, if the person doing the remastering does not pay attention to enhancing the source material.

MP3 and other digital compression techniques are lossy. That means the encoding process throws away data in order to make the file smaller. Although digital copies may not have noticeable loss, re-encoding, or encoding in a different digital format will lose even more data. Example: If somebody took a 32/22 MP3 and encoded it as a 64/44, it would sound no better than the 32/22, since data was lost in the original encode. Similarly, making a 128/44 MP3 out of an old, high-compression RealAudio(R) file would not improve the sound. The advantage to the higher bitrate is the possibility that the new encode will play in a larger number of MP3 players.

Some people record their RAs or MP3s onto cassette, and then trade the cassettes. At some time in the future, somebody else might try making an MP3 from the cassette. This analog - digital - analog - digital conversion results in a very quick deterioration of the sound because of the lossy compression I mentioned before. The new encode is a "sample of a sample". The sound deteriorates much more rapidly than does the "generation loss" experienced when duplicating tapes.

How can one tell if an MP3 was originally made with a high bitrate, or merely upsampled to a high bitrate? Listen to it, and compare it with a low bitrate sample. After all, the objective is to get as good an audio rendition as possible.

---

NOTE: URLs mentioned in this FAQ may have changed. For the latest information, point your browser to www.old-time.com, or join one of the internet mailgroups mentioned above. Email addresses listed here may have changed as well.

If you find errors in this document, please report them to faqmaintainer@old-time.com, with  Use the title "FAQ Error" to pass spam filters.

10:30 Oct 19, '03

(IsraelNN.com) The weekly cabinet meeting began a short time ago. One of the items on the agenda is the proposed Pirate Radio Station Law, making it illegal to pay for advertisement on a pirate (illegal) station. According to the law, anyone advertising on a station would be hit with a stiff fine.

The supporters of the law, Shinui party ministers, are confident that by eliminating income from sponsors, the illegal stations will be compelled to close. Shinui ministers insist their agenda is not targeting the many Orthodox radio stations or Arutz-7, but aimed at eliminating the radio broadcast interference with airport control towers, the result of the illegal broadcasts.

Ministers Benny Elon and Effie Eitam have expressed their opposition to the proposed law.

Sirius blows, and every audio magazine out there agrees.  Sirius is heading for Chapter 11, while XM is about to pick up its 1,000,000th customer.

"JH@nospam.com" <JH@spambites.com> wrote in message

For sale:

The "Radio Crazy", it is back!!!!!!

For sale: Partial interest in Kentucky fulltime AM in rated market. Joint venture. (You venture out, you go to the JOINT!) HI!

Active or inactive investors with at least $10,000 each are welcome. All investors would be on the board with full voting rights if desired.

The total consideration for the station is only $100,000. 5/8 wave tower! Tower/transmitter site lease is only $200.00 a month and the lease is good to the year 2014. NO REAL ESTATE! You heard it first here, kiddies! Studios will have to be built.

Tel: (478)741-1710. See my ad in October 22nd Radio World under "For sale, stations".

73,

Meyer Gottesman, W6GIV aka "The Radio Crazy".
Macon, GA

Colin wrote:

> The power supply for this radio is a 175 watt inverter powered from a 12 volt battery, which in turn is charged by a set of solar panels, the charge from which is regulated by a Morningstar Sunsaver charge controller. If I unplug the radio from the inverter and plug into the regular power supply from the grid, the noisy signal becomes clear. Additionally, after I unplug from the inverter, for a second or so as the fields in the system die down the signal becomes clear before the radio stops working.
>
> This seems to indicate that the antenna is ok, and that the interference is in the solar system somewhere, but not the inverter (otherwise the night time reception would be bad) but perhaps the charge controller is having an effect on the Trisonic amplifier?

I'm guessing that the inverter or charge controller are throwing out RF noise that's interfering. Since it's "heliotropic," maybe the latter. Have you tried unplugging the solar cell from the charge controller during the day and seeing if it clears up? If not, give it a go and see what you learn...

WCBN WILL DESTROY YOUR FEEBLE FORMATS

WCBN - 30 Years of Freeing Your Mind - Listen to us online!

WCBN is the University of Michigan student-run community freeform radio station in Ann Arbor, Michigan. We broadcast at 200 watts to the University and its surrounding communities from the basement of the Student Activities Building in downtown treetown.  We have been broadcasting a genre-less overview of music, news, and public affairs for 30 years.

WCBN's musical format is freeform, with some specialty shows. Freeform involves all different kinds of music, including jazz, reggae, blues, hip-hop, country, rock, and just about everything else under the sun. Instead of telling our DJs what to play, we allow them to select their own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an intelligent fashion, and show links between musical genres.

Click here to listen to our live WCBN-FM Ann Arbor broadcast!

For sale:

The "Radio Crazy", it is back!!!!!!

For sale: Partial interest in Kentucky fulltime AM in rated market. Joint venture. (You venture out, you go to the JOINT!) HI!

Active or inactive investors with at least $10,000 each are welcome. All investors would be on the board with full voting rights if desired.

The total consideration for the station is only $100,000. 5/8 wave tower! Tower/transmitter site lease is only $200.00 a month and the lease is good to the year 2014. NO REAL ESTATE! You heard it first here, kiddies! Studios will have to be built.

Tel: (478)741-1710. See my ad in October 22nd Radio World under "For sale, stations".

73,

Meyer Gottesman, W6GIV aka "The Radio Crazy".
Macon, GA

For anyone interested, here's a reminder of upcoming DX tests; if anyone has any additions or corrections, please contact me. (BE SURE TO NOTE THE TIME OF THE TEST; THEY ARE IN THE LOCAL TIME OF THE STATION)

Saturday, November 1, 2003 - WJNT-1180, Pearl, MS 12:00 am-1:00 am CST (1-2am EST).
E-Mail: slcarter@wjnt.com
WWW: http://www.wjnt.com

Please remember, what's listed as being on, say, Monday *may* be what you think of as Sunday night!

If you try for (or hear) any of these tests, PLEASE post a message letting me know, and please, drop the station personnel a note, via e-mail or snail

mail, thanking them for running the test! Also, for brevity's sake, I
didn't post the QSL addresses; if you need these, let me know!

Lynn.

3 MX5050 BIII machines available, your choice, $200.
All have NAB hub adaptors, one has the roll-around stand.

1 MTR-10 with hub adaptors, $400.

1 MTR-15 in roller stand, recent service check, with remote auto locator
(new). $600.

All in good working and cosmetic condition, Used in-studio, no
travel, no smoking, well maintained.

Shipping would be expensive, we would have to hire a contractor
to do it. Pick-up preferred.

Here's the results of the most recent DX test that have been received here:

Sunday, October 19, 2003 - KTNS-1060, Oakhurst, CA 12:00 am-1:00 am PST (3-4am EST):

This time, the test was heard mainly by those in the west, but there WAS a reception as far east as IL! Hearing the test were Bob Karchevski of Sunnyvale, CA, Frank Aden of Boise, ID, Bob Pietsch of Foster City, CA, Patrick Martin of Seaside, OR, and Neil Kazaross in Barrington, IL! Rick Dau in Omaha, NE metioned that he thought he might've heard some brief, weak code from the test, but there were a lot of mixing products and images interfering with his reception. Les Rayburn in Helena, AL (near Birmingham) also thought he might've heard KTNS, but after a careful review of a tape of the DX test, he decided that he did not successfully receive the test.

Also, there were those reporting that they tried for the test but weren't able to hear it; these included Saul Chernos in Burnt River, ON, Adam Myrow in Memphis, TN, Pete Dernbach in Manchester, MO (outside St. Louis)(Pete DID, however, pick up a 31-watt station from MS!), Gerry Bishop in Niceville, FL, and Chuck Boehnke in Keaau, HI.

That's all for now...

Lynn.

You know, I've been listening to Toto's cd "Mindfields" from 1999. This cd is every bit as good as their Emmy Award winning album "Toto IV" from 1982.  Why didn't this cd get airplay?  The only reason I was able to hear the Mindfield cd was via MP3 file sharing over the Internet, and now I'm buying the CD.

Are the classic rock stations so deaf to new rock they won't play the same style of music unless it's at least 20 years old?  Are tone deaf street thugs from the slums of L.A. who can't even play any instruments really that interesting?

>Does anybody know when this station is going to turn on its transmitter?

Curious to see what kind of a warped nighttime pattern it will have. Consider everything it will have to protect: co-channels in Boise, Chicago, Simi Valley, and possibly Commerce City. First-adjacents in Window Rock and San Francisco.

But hey, what's a little more noise floor on the band?

You must be reading different audio magazines than I am. Mine say
Sirius sounds cleaner.

I chose Sirius because it sounds less compressed to my ears.

Rich

within the hallowed think tank known as:bnfa6h$n5i$1@xuxa.iecc.com,
JL <jl@hotmail.com> employed much intellect to add:
> Sirius blows, and every audio magazine out there agrees.  Sirius is
> heading for Chapter 11, while XM is about to pick up its 1,000,000th
> customer.
>

Based on just what I've heard I agree Sirius blows.  They use 'PAC' which
the standards committee rejected for IBOC because it is substandard for the
lower bitrates Sirius uses.  Doesn't take a genius to take those facts and
spell Sirius as DOA.

Oh, and I've heard both and XM does sound better.

That would turn me against Sirius.

With a limited number of music channels, it seems like a bad choice to waste 5 of them on very similar genres. Sinking 10% of your music channels in one genre is wrong.

One of the great strengths I see / want in satellite radio is a wide choice of genres.

> Some RCA 5Ks and 10Ks were designed as two-phase, and, consequently, have four rectumfier (sic) tubes.

They were actually Thyratrons used as rectifiers, the plate voltage, and hence power output could be adjusted by varying the firing angle of the grid, sort of like the modern light dimmer in your dining room.

> This might be called a "four phase" rectifier in the same way as a three-phase, full-wave rectifier is called a "six phase" rectifier.

To avoid confusion I call it a 4 pulse, or 6 pulse rectifier, as the case may be.

> Oh, these 5Ks and 5Ks actually run on three-phase feeders, as the primaries are connected in a Scott-T, while the secondaries are connected as two-phase.

Yes.

> Buffalo and Philadelphia (including Camden, and undoubtedly RCA's plant as well) were the last hold-outs of two-phase power in the U.S.

Are you saying that is what inspired RCA to build these transmitters with a two phase feed to the rectifiers, I think they were the BTA-5G, BTA-10G, BTA-5H, and BTA-10H?

>Do the words "Burns on line go ahead" mean anything to you??

I recall as a young kid going to the QE Theatre with my mom and dad to support Burns after he was fired. The theatre was full and the overflow packed the plaza in the rain. [ I think he was speaking inside and recall him coming outside on a balcony or something to thank everyone for their support ].

Jimmy Pattison
>eventually destroyed CJOR when his religious zealotry got the best of him as it
>often does, and he turned it into a christian rock station which was a
>predictable failure.

A friend worked for Pattison in pr when he owned the Vancouver Blazers of the WHA. One day he went into work and didn't recognize any of the concession workers or ticket and program sellers. He found out Pattison had fired all his paid staff and recruited members of his church as volunteers to work the games. The next week the paid organist was history, replaced of course by the unpaid volunteer organist from his church. It was at this point my friend quit, he had a feeling the pastor would be sending out press releases in the near future :-)

Jimmy Pattison is so phony, professing to be a Christian, all the while committing the most un-Christian of acts. The irony is he of all people better hope there ain't a God. <g>

For sale:

(The "Radio Crazy"...it's back!)

Partial interest in fulltime 1 KW Class "C" (formerly class IV)AM station in Paducah, KY. Only $100,000 total consideration.

Joint venture (You venture, you go to the joint! HI!)

Active or inactive investors with $10,000 min. each are welcome. All investors would be on the board with full voting rights if desired.

Paducah is a progressive city of over 26,000 population.

No real estate is included. Tower site lease runs to the year 2014 at $200.00 per month. We'd have to seek and find and build new studios.

Tel: (478)741-1710. Do not mask your caller ID. My tel. will reject such calls. If you can't let me know who you are, I don't want to know you! (scowl!)

I was tuning past our local news-talk AM and noticed Ken Hamblin, aka The Black Avenger, is back on the air.  A couple of months back people in this newsgroup were saying he had committed career suicide by having an ugly parting of the ways with his network and/or syndicator.  Several people said he would likely never work in radio again, but he's back, five days a week, and nothing sounds different.  Did he sign on with a different network, or did his lawyers win out over their lawyers?  I'd be interested to know what went down.

GTT

Mine hasn't changed.  I frequently drive a route that has a couple of weak-signal problems.  They are no different than they were a year ago.  I drove that route today.

Maybe you have a receiver / antenna problem.

Those of you in the radio game ought to have an award and give it out at the NAB party in Nevada -- call it the Aimee Semple McPherson award.   Make it a nice glass or crystal trophy.

Perhaps,  the head of a clown with one of those "crazee arrows" thorugh it.

Aimee Semple McPherson was probably the first radio stuntress in history. Ms. McPherson was also one of the first radio preacher/hucksters.   She founded the Angelus Temple in Los Angeles and ran it with her mother (or former mother-in-law?) -- a woman named Kennedy.   She also had a radio station - KFSG.

In 1926,  Aimee disappeared,  and was supposedly swept under the waves while swimming at the beach.   Rescue workers could find nothing.   Unfortunately, a man died during the search and rescue.    Several days later,  after an intense radio campaign over KFSG praying for Aimee's return,   she turned up - staggered out of the desert -- and claimed she had been beaten, drugged, and raped,  and had walked six hours through the desert sun to be rescued.    This incident of weirdness was topped by the fact that her clothing and condition did not reflect six hours of walking through the desert.

There were also indications that she had been seen in the company of one of the station's engineers in a trip up the California coast while she was "kidnapped".  However,  both he and McPherson denied it,   and she was acquitted of perjury.

She returned to the Angelus Temple,  but did not enjoy her pre-stunt publicity.

McPherson died of an overdose of barbituates in 1944.

Amateur Radio Newsline™ Report 1363 – September 26 2003

Amateur Radio Newsline report number 1363 with a release date of Friday, September 26th 2003 to follow in 5-4-3-2-1.

The following is a Q-S-T.  Two more nations go code free and if you wanted to go to Albania to teach ham radio, you are to late.  Find out the details on Amateur Radio Newsline report number 1363 coming your way right now.

(Billboard Cart Here)

**

RESTRUCTURING: TWO MORE NATIONS GO NO-CODE

Two more countries have dropped the Morse code requirement for operation on the High Frequency bands.   Amateur Rado Newsline's Don Wilbanks, AE5DW, has the details:

--

Two nations on opposite sides of the world have opted to join the growing no-code brigade.  On September 15th, Ireland announced that they no longer require a Morse test.  As a result, all Irish B licensees now have Full license privileges.  But with a few caveats.

At this point there will be no change to existing callsigns.  But Class B licensees may apply for a Class A callsign but to do so they will be required to pass a Morse test.  New license applicants who have passed the Theory Test will continue to be issued with a callsign having a three letter suffix ending in B, unless they also pass a Morse Test.  Also, because not all countries operating under the CEPT agreement have yet removed the mandatory Morse requirement, operation abroad on the HF Bands by Irish Class B licenses is confined to those countries that have done so.

Meantime, the Singapore Amateur Radio Transmitting Society has been advised by the nations Info-comm Development Authority that, as of the 15th of September, the requirement for a Morse code examination for High Frequency operating privileges in Singapore has been removed. And as from the 16th of September all current and future licenses became convertible to the Singapore General Class. This, with full High Frequency operating privileges.

For the Amateur Radio Newsline, I’m Don Wilbanks, AE5DW, in New Orleans.

--

By the way; Singapore is thought to be the first country in Asia to adopt the recent amendments of Article 25 of the ITU Radio Regulations. Many others around the world are expected to follow in coming days. (GB2RS, Q-News)

**

RESTRUCTURING: CQ READERS FAVOR HF PRIVILEGES FOR TECHS BUT ARE SPLIT ON CODE TESTS

A survey of CQ magazine readers shows respondents are strongly in favor of granting at least some high-frequency operating privileges to already-licensed hams who have not taken a Morse code test, but are evenly split over the question of continued Morse code exams for amateur licenses. Amateur Radio Newsline’s Mark Abramovitz, NT3V, took a look at the survey results and has more:

--

According to CQ Editor Rich Moseson, W2VU, nearly two-thirds of the CQ readers who responded to the survey favor giving limited High Frequency privileges to currently-licensed Technician Class hams who have not taken a code test. Another 36% of those responding said there should be no changes in operating privileges.

Among those who favor changes, 43% support merging the current Novice and Technician licenses and combining the privileges of both, while another 26% favor expanded privileges for both classes, including High Frequency subbands offering voice, CW and data at limited power levels. In addition, 14% supported giving Novice High Frequency privileges to Technicians, but not giving full VHF privileges to Novices. The remaining 17% were split between giving current Technicians only current Novice voice privileges and only current Novice code privileges.

Moseson says that readers were split, 50-50, on the question of whether the FCC should change its current code test requirements. Of those who favored change, 50% called for the elimination of code tests for both General and Extra Class licenses, while 42% favored eliminating the General Class code exam but keeping it for the Extra Class license. The remaining 8% supported replacing the current code test with a code recognition test similar to the exam used for the Foundation class license in the United Kingdom.

And heres a big surprise. While only half the CQ readers want the FCC to change the current code test requirements, three quarters of those who sent in the survey said they agreed with the decision at the 2003 World

Radiocommunication Conference to leave the question of code tests up to each country to decide.

Finally, the ARRL and International Amateur Radio Union got a strong vote of support for the time and money they invested in securing the compromise agreement on 40 meters. One that will eventually double the size of the band for amateurs in Europe, Asia, Africa and Oceania, while removing broadcasters from the 7 point 100 to 7 point 200 MHz segment by 2009. Seventy-eight per cent of C-Q readers responding to this question said the effort was a worthwhile investment of member dues and staff time. On the other side only 9% said the benefit was not worth the cost. 13% had no opinion on the issue.

According to Moseson, a significant aspect of these survey results is that 84% of the readers responding already have High Frequency operating privileges, 75% report being active on HF, and 58% hold Extra Class licenses.

For the Amateur Radio Newsline, I'm Mark Abramowicz, NT3V, in Philadelphia.

--

The survey was included in the September, 2003 issue of the magazine. CQ Editor Rich Moseson, W2VU, said over 400 CQ readers responded to it. Moseson admits that it was in no way a scientific poll but he says that it does provide a "snapshot" of reader views on various topics. (ARNewsline(tm))

**

RADIO LAW: A BPL DOCUMENT FOR HAM RADIO

Turning to the latest in ham radios war against the introductuion of Bradband Over Powerlines or BPL, the Wireless Institute of Australia has prepared a document detailing the pros and cons. Phil White, VK2DKN, is its author:

--

White: "The purpose of the document was not only to advise the WIA of the exact position of BPL in Australia, but also to educate the general Amateur fraturnity on the situation wth BPL that was likely to affect them."

--

White said that he tried to present a balanced view of the BPL situation, covering both sides:

--

White: "I tied to present a fairly balanced view in the document so Amateurs can see both sides of the argument. And there are some very strong arguments for and against the adoption Broadband Over Powerlines."

--

How best to fight the introduction of this technology? White says hams need to forge alliances with others who will be affected:

--

White: “My opinion is that Amateurs need to for an associatoon wih other HF users, and those users may include people like defense, four-wheel-drive groups, CB’ers -- any people who are affected by the introductuion of BPL technology.”

--

According to White, alliances like this will put Amateur Radio in a much stronger position to gain access to any standards committees working on the introduction of BPL. (Q-News)

RESCUE RADIO: TEXT MESSAGE RESCUE

If you think that Morse code is still needed for a successful rescue at sea, guess again. Three men who were rescued from the hull of a capsized boat on Saturday, September 13th definately know this. You see, they were saved after one of the sailors sent an electronic text message to his father using a two-way pager.

Caught in what the British Coastguard later described as rough seas and gusts up to 45 knots, the men used a combination of a mobile phone and VHF radio to call for help. The Coastguard first received an emergency assistance request at 4:50 pm UTC but that call was dropped due to poor signal strength.

Then came a signal from an emergency locating beacon triggered by the men. It showed the vessel to be south-west of St. Catherine's point on the Isle of Wight. But it wasn't until the Coastguard received a call from one man's father - calling from his home, near Southampton - that the position was confirmed. His son had dent him a text message that he passed onytto the Coastguard. A helocopter was dispatched and the men were plucked to safety.

Commenting on the rescue, and the way text messaging can often make it through when coverage is patchy was Watch Manager Colin Griffiths. He said that the incident adds to the number of times the Coastguard has been alerted to a marine incident by just such a text message. (silicon.com via KB4KCH)

## HAM RADIO BUSINESS:  ROHN FILES CHAPTER 11

A company that literally as well as figuratively supports more ham radio antennas than any other is fighting for its survival.  This as tower manufacturer Rohn Industries announces that it and five of its subsidiaries have filed for Chapter 11 bankruptcy relief in federal court.

Subject to the provisions of the Bankruptcy Code, the September 16th filing means that Rohn remains in possession of its properties and continues to operate its business.  The company says that the objective of the Chapter 11 proceeding is to maximize recovery to creditors by facilitating an orderly sale of its assets. (QRZ.com)

**

## ENFORCEMENT:  SEATTLE CB’ER FINED FOR REFUSING STATION INSPECTION

A Citizens Band radio operator has been ordered to pay the FCC $500 for his refusal to permit agency inspection of his station.  Amateur Radio Newsline’s Mert Garlick, N6AWE, has the rest of the story.

--

Tacoma Washington resident William A. Woods is the CB operator in question. According to the FCC, Woods was initially fined $7000 for  failure to make his CB radio station available for inspection at the request of authorized Commission personnel.

On September 3, 2002, the Seattle FCC Office received a report from the City of Tacoma, Washington, concerning complaints about interference to home entertainment equipment in the 3000 block of South Madison Street.  A few weeks later agents determined that an interfering signal on 27.025 MHz was coming from Woods home.  The agents also observed that the signal strength levels were significantly higher than those expected from an authorized CB transmitter.

After a second observation on November 5th, 2002, the agents, who were accompanied by two police officers, requested that Woods make his CB station available for inspection.  After a delay, Woods allowed the agents but not the police officers to enter his residence.  Once the agents began the inspection of the CB station, Woods changed his mind and refused to allow the examination to continue.  The agents then informed Woods that his refusal to allow an inspection could result in a monetary forfeiture.

On December 30, 2002, the Seattle Office issued a Notice of Apparent Liability to Monetary Forfeiture in the amount of $7,000 for refusing to allow an inspection of his station.  In his response Woods claims that the agents who came to his residence on November 5, 2002, did not present any identification and that he did not refuse to allow the agents to inspect his station.  He also stated that he had taken medication before the agents arrived at his house. Woods also submitted financial documentation concerning his inability to pay the proposed monetary forfeiture.  After considering his response the FCC elected to reduce the fine to the $500 level and gave Woods the customary 30 days to pay.

For the Amateur Radio Newsline, I'm Mert Garlick, N6AWE, reporting.

--

No word if Woods plans to pay the $500 fine, or file a further appeal.  (FCC)

**

ENFORCEMENT:  FAILURE TO REGISTER TOWER BRINGS $3000 FINE

The FCC has fined Dewey D. Lankford $3000 for his failure to register his broadcast tower. Lankford is the licensee of station WANA-AM in Anniston, Alabama, and owns that station's antenna structure.

According to the Commission's records, the towers height above ground is over 200 feet.  On June 26, 2002, an agent from the Atlanta Office inspected the antenna structure.  A recent check of the of the Commission's tower registration records indicates that WANA's tower still remains unregistered.

In his defense Lankford asserted that the previous owner of the station told him that everything regarding the station was "in order" and there was a "variance" regarding registration.  Lankford further states that he believed, on the basis of a telegram from the FCC received by the previous licensee of WANA, that the tower was not required to be registered because it has no marking or lighting requirements.

But in imposing the fine the FCC says that Section 17.4(a) of the Rules requires the registration of antenna structures which require notice to the Federal Aviation Administration.  FAA notification is required for towers whose height above ground level exceeds 200 feet.  According to the Commission's records, the height of Mr. Lankford's antenna structure is over 200 feet. The antenna structure is, therefore, required to be registered.  The FCC adds that the lack of marking and lighting requirements does not negate the tower registration requirement.  (FCC)

**

HAM ENTERTAINMENT: UPDATE ON THE HUMAN RACE

Remember the proposed television show The Human Race.  The one which would pit two teams of hams against one another in a race around the world?  Well, the producers have announced the availability of a short video to that they have produced to accompany grant applications and have also posted it on the shows website.  The mini show is an 8 megabyte file.  You can download and view it www.humanrace.fr.st or
www.qsl.net/w1zy/archive/july/video.html  (Q-News)

**

NAMES IN THE NEWS:  W6OBB RETURNS TO COAST TO COAST AM

Some names in the news.  First up is Art Bell, W6OBB, who has returned to the radio show he made famous, but only for two days – or should I say two nights -- a week.  According to an announcement from Premiere Radio Networks, Bell has agreed to replace Barbara Simpson as weekend host of Coast to Coast AM.

W-6-O-B-B began broadcasting live on Saturday night September 20th. His new version of weekend Coast to Coast AM is live from 1-5 a.m. Eastern Time on Saturdays and Sundays with a re-feed from 5 from 9 a.m.

Bell broadcasts from a studio in his home studio in Pahrump, Nevada. According to Premiere Netwoks Bell staid that for him, a return to radio is both mysterious and reassuring. (Premiere Radio)

**

NAMES IN THE NEWS: PRODUCTION COMPANY SUES WALTER CRONKITE, KB2GSD

And a Florida company has sued Walter Cronkite, KB2GSD, for $75,000. WJMK, Inc. claims that the former CBS anchorman illegally backed out of a contract to film what amounted to infomercials.

According to the Charleston Post-Courrier, Cronkite had agreed to show up for two days of taping with WJMK Inc.. This is a company which provides segments for TV stations on health care and the drug industry. Cronkite backed out in May after a New York Times article questioned whether he was being paid to help produce commercials designed to look like news.

The lawsuit was filed Wednesday September 17th by WJMK in Manhattan federal court. It claims the 86-year-old Cronkite and his production company knew his name and image could be used for any and all media. But Cronkite's lawyers insist he was misled into believing he was filming educational programming when in fact WJMK was taking money from health care companies to produce segments on their products.

As most hams are aware, late last year Cronkite volunteered his services to the not-for-proft Amarican Radio elay League as host of its new video Amateur Radio Today. As reported here on Nerwsline, that show was recently honored with a third place award at the Chicago Film Festival in Illinois. The story is in cyberspace at http://www.charleston.net/stories/092003/wor_20people.shtml (Charleston Post-Courrier)

HAM RADIO EDUCATION: ALBANIA HAM TEACHING POSITION FILLED

A follow up to last weeks story on the search for a ham radio instructor willing to teach Amateur Radio in Albania. Well, if you wanted the position and waited to respond, forget it. Word from the planners is that hey had quite a few responses. They are now assessing the candidates and the person chosen will be announced shortly.

The Albanian ham radio training course will be presented at the Technical University of Tirana in November. It is being organized in coordination with the Albanian Ministry of Telecommunications in conjunction with the IARU using Radio Society of Great Britain Radio Amateur Examination documentation. (Various sources)

**

WITH THE ARRL: 160 METER CW PRACTICE SHIFT

Starting Monday, September 29th, ARRL headquarters station W1AW will shift its 160-meter code practice and bulletin transmission frequency to 1817.5 kHz. The frequency shift not only brings W1AW's Top Band frequency in line with those the station uses on other bands, it also should help to eliminate possible interference from broadcast station harmonics and birdies.

W1AW has been conducting code practice and bulletin transmissions on its current 1818 kHz since 1982. Prior to that, W1AW transmitted both CW and phone bulletins on 1835 kHz. The frequency change is effective starting with the September 29th 2000 UTC code practice run. (ARRL)

**

HAM ANIVERSARIES: THE WS9CAN REPEATER AT 25

The Southern Counties Amateur Network Harrisburg Il. is celebrating the 25th Anniversary of its 146.880 repeater. To share his milestone the club plans to operate a special event station on October 5th 2003. W-S-9-C-A-N will oprate from 1800 to 2300z UTC on 40 through 15 meters. If you work them, Q-S-L with a self addressed stamped envelope to Vic Maue Jr., WD9EMF, RR#1 Box 102, Simpson Illinois. The zipcode is 62985. (VHF Reflector)

**

CONFERENCES: 2003 MID ATLANTIC STATES VHF CONFERENCE IN PA

Make your reservations now for the upcoming Mid Atlantic States VHF Conference, this year at the Radisson North East in Trevose, Pennsylvania. The date is Saturday, October 11th. The conference is sponsored by the Mt. Airy Radio Club and everyone is invited to attend. For more information via e-mail write to packrats_w3ccx@yahoo.com or visit www.ij.net/packrats on the world wide web. (VHF REflector)

**

RADIOSPORTS: ARDF REGION 3 GAMES THIS FALL

Planning for the 5th annual IARU Region 3 Amateur Radio Direction Finding Championships is reportedly progressing well. The games are slated to be held in the town of Ballarat Australia this November and December. To register, e-mail registration@ardf.org.au. Full details are on the web at www.ardf.org.au (News release)

**

DX

In D-X S57CQ, is very active slash YI from Iraq, especially around 14.270 MHz SSB. He expects to be in Iraq until mid-October. QSL via S57DX. (GB2RS)

And YA1D in Afghanistan is active almost daily after 1230 UTC on 80 to 10 meters. His operation is mainly on SSB but with some slow CW. (GB2RS)

Lastly, G4VGO, reports that he will be active for about two years from Singapore as 9V1GO. His activity will be mainly on the low bands on CW, especially 30, 80 and 160 meters, at his sunset and sunrise. QSL as directed on the air. (GB2RS)

**

THAT FINAL ITEM: TURNING BACK THE SANDS OF TIME

And finally, we began this weeks newscast with a restructuring story and we will end it on the same note. In this case a look at some petitions for rule making that are reportedly on their way to the FCC. And when it comes to opening up ham radio to more people, one appears to want to turn back the hands of time. Amateur Radio Newsline's Bruce Tennant, K6PZW, is here with a little bit of information on two of the stranger ones being talked about in cybrspace:

--

Audio report only. Hear it by downloding the newscast at http://www.arnewsline.org

--

Just before going to air we checked the FCC’s website and could not find a Rule Making designation for either of these. But it does not end here. More petitions, both for and against continuing Morse testing are believed in route to the FCC. (Listener reports)

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline @arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. I've not heard of this happening and haven't experienced it myself. My in-home receiver is a Sky Fi in a room next to our kitchen and reception is perfect, at all times.

Once in a blue moon there will be a little dead air or a dropout of some kind from XM -- highly unusual though to have ANY kind of interference. Bet you won't see it regularly.

Have you tried to make it happen again with the microwave?

> Encouraged by the info and feedback I got in here recently, I went
> out and got me a tuner for XM last week.

```
> As I wanted  to listen to it at home and not in a car, I got the  home

>>
> Buffalo and Philadelphia (including Camden, and
> undoubtedly RCA's plant as well) were the last
> hold-outs of two-phase power in the U.S.

Are you saying that is what inspired RCA to build these transmitters with a two phase feed to the rectifiers, I think they were the BTA-5G, BTA-10G, BTA-5H, and BTA-10H?
>>

I am hypothesizing that RCA utilized some ingenuity and well-known (to two-phase aficionados) engineering techniques to make an unusual box which had some unique cost-savings features.

>>
To avoid confusion I call it a 4 pulse, or 6 pulse rectifier, as the case may be.
>>

However "incorrect" it may be, the literature calls these "four phase" and "six phase".

"Twelve phase" is also employed. This is really three-phase, full-wave, using a "zig zag" transformer.

One of the news stations in LA (KNX I think) runs the
President (and the opposition party's response) every
Sat morning.

It's quite possible that the Daws Butler story was cut at the last minute for
another breaking story.

For anyone interested, here's a reminder of upcoming DX tests; if
anyone
has any additions or corrections, please contact me. (BE SURE TO NOTE
THE TIME OF THE TEST; THEY ARE IN THE LOCAL TIME OF THE STATION)

Saturday, October 4, 2003 - WJTO-730, Bath, ME 12:00am-1:00am ELT.

Please remember, what's listed as being on, say, Monday *may* be what
you
think of as Sunday night!

If you try for (or hear) any of these tests, PLEASE post a message
letting
me know, and please, drop the station personnel a note, via e-mail or
snail
mail, thanking them for running the test! Also, for brevity's sake, I
didn't post the QSL addresses; if you need these, let me know!

Lynn.

I'm trying to get the Coast to Coast show, but because I'm in a highrise surrounded by concrete, I get no AM reception. I just get static and a hum. Can an antenna be hooked up to the radio that would end outside my window to pick up the signal? There is also a building  on one side, but it is clear for quite a bit outside my window. Can anyone please help? Please also e-mail, if kind enough to respond. Thanks!

I have a CRL processing chain that I'm setting up and I'm just wondering if anybody has any advice or experience regarding these units. I have the SGC-800 Stereo Gain Controller, SEC-800 Spectral Energy Compressor, and the SMP-950 AM Stereo Matrix Processor. I'm setting this up on an AM station (and yes, it will be in full-fledged AM Stereo!), but the first two units apparently can be used for FM processing as well.

I know these are all late '80s units so they won't be as smooth or as loud as a modern Optimod, but I would at least like to achieve a reasonably "polished" sound, similar to the other CRL-equipped stations I've heard. The manuals list a whole page of suggested settings for each unit, but I have yet to discover a configuration that provides the ideal compromise between loudness and fidelity.

I may experiment with using additional processing in front of or in combination with these CRL boxes, but if anybody has their favorite "magic" settings which help this CRL trio perform at its best, I would appreciate your advice and recommendations (other than "toss it all out and spend the $$$ on an Optimod 9100-B2!).

Since the HDC codec provides 15 kHz bandwidth in stereo, while analog AM stereo is limited to perhaps 9.5 kHz (given an ideal receiver and understanding the absolute need for a 10 kHz carrier-beat filter), the digital signal will sound far better to anyone whose hearing acuity extends to 15 kHz, which is the bandwidth commonly accepted as being necessary for an impression of high fidelity.

The digital signal will also have a noise floor in excess of 90 dB below 100% modulation, making it immune to the static and manmade noise that has caused so many problems on the band in the last few decades.

Even disregarding the subtleties (of which there are many), these two
factors alone make HD AM dramatically superior to analog AM stereo.

In article <bkfn7d$5f$1@xuxa.iecc.com>, wbrw@radiomailbox.com says...
>
>
>After universal complaints about horrendously poor audio quality,
>iBiquity has revamped their IBOC digital AM system by switching to the
>"HDC" codec -- a slightly warmed-over version of AAC Plus, as used by
>Digital Radio Mondial (DRM).
>
>iBiquity claims a large improvement in quality -- but can IBOC, now
>with HDC, even match up to the quality that analog AM Stereo has
>offered for decades?  Listen, compare, and judge for yourself:

If you can get access to any location outside your apartment try an active antenna. Such a device consists of a high gain rf amplifier and a 2 to 3 foot long whip. Go to Grove Enteprises' web site www.grove-ent.com

CCA Parts and Schematics

For over 30 years, CCA was an industry leader in the manufacturing of FM Transmitters. Because of their dependability, quality craftsmanship, and simplicity these transmitters are easy to operate and repair. Recently the company fell victim to a slow economy and was forced to file for Chapter 7

Bankruptcy.

VBEngineering stepped in and has been authorized to begin selling replacement parts for most CCA Transmitters. VBE can supply a full line of hard to find replacement parts for CCA Transmitters.

Many parts are in stock now and ready for shipment. We also have all the Schematics and Manuals available for your Engineer.

I am looking for a free or cheap Radio Station Automation software for a online/low budget radio station which program would you reccommond. I am look for a program that will play like 15 to 30 IDs randomize them and play them after every 4 to 10 track and it also needs to work with winamp or just play mp3s. Where can I download looking for something 20meg or less I am on a 56k modem so I do not want to spend 12hr downloading something. My Radio station is Phat Beats Radio online station that Plays Rap Hiphop R&B & Techno. I am also thinking about getting a sure mic is this way any good http://www.radioshack.com/product.a...%5Fid=33%2D3048 so is it a good mic for online & FM Broadcast and is

Sheellah wrote:
>
> I'm trying to get the Coast to Coast show, but because I'm in a highrise surrounded by concrete, I get no AM reception. I just get static and a hum. Can an antenna be hooked up to the radio that would end outside my window to pick up the signal? There is also a building on one side, but it is clear for quite a bit outside my window. Can anyone please help? Please also e-mail, if kind enough to respond. Thanks!

There's two effects to be overcome.

1. Your radio is not sensitive enough, in which case it can be fixed by a MW loop (Select-a-tenna or Terk MW loop are the two easily obtainable; get the passive (cheap) versions, not the active ones; the cheap ones run $40-$60, a huge profit margin but worth it after you consider doing it yourself having to scrounge materials and pack it neatly.)

A MW loop impedance matches the radio's internal loop antenna to free space and raises the sensitivity of most radios enough so that external noise is louder than internal noise, which is to say no radio will be more sensitive. All will hear the same noise no matter how much more sensitive they're made, at that point.

That may be enough to hear your station.

2. Which brings up the second effect, you're surrounded by noise-making devices like dimmers, in which case you'll only hear them more clearly rather than the station you want. Other than aiming the radio (and MW loop if you got one) so as to minimize that noise, and aiming matters a great deal so try it, there's

nothing you can do short of moving the radio or its antenna, if the radio allows you to attach an external antenna, or if you arrange an external antenna anyway, which is possible but not described here.

A final alternative is a local FM transmitter: put AM radio and FM transmitter near a window, and play the AM radio into the FM transmitter.  Listen to the FM transmitter inside the building.  CCrane sells them, probably among others.

```

WCBN WILL DESTROY YOUR FEEBLE FORMATS

WCBN - 30 Years of Freeing Your Mind - Listen to us online!

WCBN is the University of Michigan student-run community freeform radio station in Ann Arbor, Michigan. We broadcast at 200 watts to the University and its surrounding communities from the basement of the Student Activities Building in downtown treetown. We have been broadcasting a genre-less overview of music, news, and public affairs for 30 years.

WCBN's musical format is freeform, with some specialty shows. Freeform involves all different kinds of music, including jazz, reggae, blues, hip-hop, country, rock, and just about everything else under the sun. Instead of telling our DJs what to play, we allow them to select their own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an intelligent fashion, and show links between musical genres.

Click here to listen to our live WCBN-FM Ann Arbor broadcast!

WCBN WILL DESTROY YOUR FEEBLE FORMATS

WCBN - 30 Years of Freeing Your Mind - Listen to us online!

WCBN is the University of Michigan student-run community freeform radio station in Ann Arbor, Michigan. We broadcast at 200 watts to the University and its surrounding communities from the basement of the Student Activities Building in downtown treetown.  We have been broadcasting a genre-less overview of music, news, and public affairs for 30 years.

WCBN's musical format is freeform, with some specialty shows. Freeform involves all different kinds of music, including jazz, reggae, blues, hip-hop, country, rock, and just about everything else under the sun. Instead of telling our DJs what to play, we allow them to select their own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an intelligent fashion, and show links between musical genres.

Click here to listen to our live WCBN-FM Ann Arbor broadcast!

Easiest way: Put the RADIO right there on the windowsill.

Most radios these days don't have connections for AM antennae. They use a loopstick (powdered iron bar wrapped with fine wire) inside the case to "pick up" the signal. Good enough for local reception.

Also, go to this website:

http://www.selectatenna.com/

This type of antenna is just a big coil that you tune to match the frequency your radio is tuned to. No connections. Just sit both of them next to each other and play with the positioning until you find the spot that best works for THAT particular station.

An antenna outside your highrise isn't likely to do you much good, but placing a radio with a large ferrite coil/receiving loop in your window and turning said radio to increase the AM signal might greatly help. Radio Shack also sells a loop that can increase signals you receive by coupling to the present loop you have.  I assume that you have a decent radio like for example the approximately $50 GE Super Radio with a large loop.  If you're for example trying to use your stereo or tuner, it likely lacks a good enough AM antenna

Used the same units when we first went AM stereo in 1984. Was in use till a new chief engineer arrived with his fancy new processor. We're now using the Optimod 9100B-2 with the LED metering. If you do look for an optimod, find a 9100B with the 'real' meters.

Gee....CRLs.  Wow.

Properly set up, I think CRLs can still beat anything currently available.  I know I had a couple, a stereo set on both AM and FM (and this before AM Stereo was rype-accepted) and I just killed the competition.

The trick is to work the gain control (as in processing) in such a way that clues are introduced in the envelope which "inform" the listener about how loud the audio was before the CRLs crunched the hell out of it.  As such, gating, speed and slope all have to be set in such a way that the audio is loosely, not tightly, controlled, the latter being all to easy to do with the CRL set you have.

Bottom line....the lights need to blink a lot, and only on the loudest sections should they be on all the time.  But here's the thing....my settings were never even close to the suggested settings.  Those settings are too aggressive, and you can get a result that sounds louder but is less processed if you set it up with finesse, not sledgehammers.

Beyond that, it's still a process of trial and error....if your source material is particularly bright, then you'll want to have less gain on the high band section on the SEC.  There's also a lot of fiddling with the NAB filter (in that the curve, and rolloff, need to be respected...don't push the high end too much, 'cos the SMP's going to clip it before filtering).

Good luck.  I've really never had anything good to say about Orban products, unless
they've been modified or are used very gently as the last box before it hits the
transmitter.  High priced junk, really.

Hello,

The CRL chain was always my favorite for AM Stereo, over the Optimod 9100, which favors mono loudness at the expense of stereo quality. If you are after a clean, smooth sound, I have a few modifications (nothing major)that help those units.

I'd be happy to share setup tips on the CRL boxes, although it's been a few years since I had my hands on the set you describe.

JG

Judging by the samples on...
http://www.wor710.com/Engineering/iboc/audio_samples.htm

...and from current tends in audio coding, it's almost certain that the HDC codec is using spectral band replication. In which case, all that bandwidth up to 15kHz is fake. There's a genuine 5kHz or 7.5kHz audio bandwidth, and the rest is synthesised. Quite badly, to my ears.

> The digital signal will also have a noise floor in excess of 90 dB below

The fact that silence is silence will please some people, as will the lack of crackle and hiss. But the (hopefully inaudible) coding noise is only 20-30dB below the signal in a good, high bitrate psychoacoustic codec. Things will be even worse in low bitrate digital AM. I didn't know a 90dB dynamic range was part of Orban's business plan? ;-)

> Even disregarding the subtleties (of which there are many), these two
> factors alone make HD AM dramatically superior to analog AM stereo.

Some people may be superficially pleased with the silence moments, and bright sound. However, listening to the samples, it sounds really quite nasty. IME, people can be very unforgiving of that kind of artificial, metallic, "computer" sound.

btw - I'm in Europe, so can't listen to AM stereo, or IBOC HD radio off air. Our digital AM plans, if any, seem to be based on DRM. I doubt we'll see IBOC over here. It's sad that the world's radio standards will probably be split in the same way that the world's TV has been. That's if any consumers actually want digital radio at all.

Cheers,
David.

If IBOC were running pure compressed digital audio, that would be true!!  However, IBOC on AM is only 36 kbps, and only maintains accurate frequency response up to _5 kHz_ -- all audio above that point is "spectrally replicated", i.e. "faked" based on harmonics of lower frequencies.  To my ears, it sounds like the treble has been run through a cheese grater!

Analog AM may have a more limited high frequency response, but at least it is ACCURATE treble response -- not screechy, gritty, heavily artifacted treble that is about as pleasing to the ears as fingernails scratching on a chalkboard.

A new comparison between analog AM Stereo and digital IBOC/"HD Radio" AM can be found on this site:

http://www.geocities.com/kevtronics

Download the audio samples of both, and compare!

p.s. One thing I can say, however, is that your Optimod 9100-B2 is the best-sounding analog AM audio processor that has ever been built -- and, of course, it really shines with AM Stereo.  Stations which just want to be LOUD use the 9200... but stations which want to be both loud AND good-sounding almost universally use the 9100.

I have developed an automation system that rotates and plays music by
catagory, randomly playes jingles and promos, schedules/plays
commercials and logging them when played. It can be run on 1(for air),
2(for production), 3(for office), or more networked computers. It can
do full automation, live assist, or manual playback. For a demo go to
www.streamaudio.com, search for and click on WPRX. After
midnight(eastern) they're fully automated.

Send me an email for more details.

US 103.1 is WQUS, officially licensed to Lapeer.

Club 93.7 is WRCL, Frankenmuth.

I'd rather put up with some noise and limited bandwidth so long as the
program sounds RIGHT and natural... rather than a strange unnatural
swishing
sound that just happens to have wide bandwidth and low noise floor.

The brain filters out noise and ignores lack of 'highs'.. but when the
whole
sound of the thing is as if it's all come through a satellite
videophone.. yuk!
I've given up on broadcasting as a source of good audio, the only way
to get
good sound is to buy music. And, since I refuse to pay a penny to the
record
companies unless I really can't help myself, this means things have
gotten depressingly limited. Modern life is indeed rubbish.

>couldnt find them on the FCC page.

According to the US 101 website (http://www.us103.com/) it's WQUS.

Best guess on Club 93.7 is WRCL, licensed to Frankenmuth, based on a search on the
frequency at the FCC (and the ownership being "Regent Broadcasting of Flint,
Inc.";
apparently they own both stations, as well as two other FMs and an AM ... look at
the
bottom of http://www.wcrz.com/employment.htm).

WCBN WILL DESTROY YOUR FEEBLE FORMATS

WCBN - 30 Years of Freeing Your Mind - Listen to us online!

WCBN is the University of Michigan student-run community freeform radio station in Ann Arbor, Michigan. We broadcast at 200 watts to the University and its surrounding communities from the basement of the Student Activities Building in downtown treetown. We have been broadcasting a genre-less overview of music, news, and public affairs for 50 years.

WCBN's musical format is freeform, with some specialty shows. Freeform involves all different kinds of music, including jazz, reggae, blues, hip-hop, country, rock, and just about everything else under the sun. Instead of telling our DJs what to play, we allow them to select their own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an intelligent fashion, and show links between musical genres.

Click here to listen to our live WCBN-FM Ann Arbor broadcast!

Ahem ... I may have been a little hasty in blaming the microwave.  I ran it
a few times after midnight (when no other sources of interference are likely to
be running, I hope)  a few times, and the signal was unaffected.
However, at varying times in the afternoon, 1:30 pm, 3:30 or 4:00 pm
local time the sound "blinks".  A second or two of silence, then the
signal returns for a short time before  it blinks off again.
This lasts an hour or two, then all is well again.  I'm still
monitoring it, trying to establish a pattern of come kind.

For anyone interested, here's a reminder of upcoming DX tests; if
anyone
has any additions or corrections, please contact me. (BE SURE TO NOTE
THE TIME OF THE TEST; THEY ARE IN THE LOCAL TIME OF THE STATION)

Saturday, October 4, 2003 - WJTO-730, Bath, ME 12:00am-1:00am ELT.

Please remember, what's listed as being on, say, Monday *may* be what
you
think of as Sunday night!

If you try for (or hear) any of these tests, PLEASE post a message
letting
me know, and please, drop the station personnel a note, via e-mail or
snail
mail, thanking them for running the test! Also, for brevity's sake, I
didn't post the QSL addresses; if you need these, let me know!

Lynn.

Can't recommend anything from own experience, but you'll get a list
with 13 links about Radio Station Automation software (most of them
mentioned in this group over the years) at the URL mentioned below -
search for automation, and limit the search to the category
"Software".

WRCL and WQUS, respectively, according to their web sites.

Hello All,

Driving home from the Marlins games on both Friday and Saturday, I =
noticed a hetrodyne interference on WQAM -- there was a tone in the =
background.

I am wondering if anyone else noticed this. My uneducated suspicion is =
that the Cuban stations are trying to jam the signals again. I know how =
possesive  of baseball Castro is, and I think I remember he tried to =
have the games blocked in 1997.

Any thoughts? Opinions?

Thanks,
Robin

There's no doubt in my mind that IBOC on AM is, at best, a con.  If it works at all, it will be only in the metro coverage, as the digital sidebands, down 39db from carrier if I read the document linked below correctly.

FM won't be much better.  If your digital stream is in the noise, it won't be available to the receiver.

It's fairly apparent that most decisionmakers in radio these days don't know what to listen for (otherwise radio would sound better), so when they hear "digital" or "high-definition" (a misnomer if there ever was one) they're all ears and wallets.

Barnum was right.  A shame, really.  The Canadians have a better way to do it, and it ain't IBOC.

And for what it's worth, so was Nyquist.  You can't get 15kHz through a channel only designed to properly sample 5kHz.

For your reading pleasure.....
AM IBOC Standards: http://hraunfoss.fcc.gov/edocs_public/attachmatch/FCC-02-286A3.pdf
FM IBOC Standards: http://hraunfoss.fcc.gov/edocs_public/attachmatch/FCC-02-286A2.pdf

There was no search function at the site.  Perhaps if you told us what format they are we
could find it on the station locator page?

>Send me an email for more details.

I'm interested.

To explain==Imus is NOW on KPLS by tape delay from 5 to 9 am (having
been dumped by KLAC 570) Signal is very powerful in San Bernardino and
Riverside Counties Other programming is 'bartered and conservative.'

KPLS was intended to be anchor station for the now-defunct Catholic
Family Radio Network. (As I recall it first went on the air with 2.5
kw licensed to city of Orange.) No information has been announced on
programming plans for the new Radio Visa.

Well, AM 1660 was supposed to be the X-Band partner of Elizabeth's AM 1530 WJDM (formerly a REALLY cool all LOCAL rock oldies daytimer).

AM 1530 later went leased-access in the mid-late 90s and then started AM 1660 which was hooked up with the kiddie-pop Radio Aahs network. Call letters were WAHS.

When that folded, AM 1660 was supposed to be bought by Catholic Radio Network and the calls were prematurely changed from WAHS to WBAH.

When the sale to CRN fell through, Radio Unica stepped in and bought both AM 1530 and AM 1660.

They kept the leased access (now mostly Spanish religious) on AM 1530 and upgraded the AM 1660 night signal so that now we have a solid signal day and night on that wavelength.

Radio Unica also moved the station closer to NYC...so now it's WWRU Jersey City instead of WWRU, EEE-lizabeth. :-)

I just want to know if Radio Unica plans on returning the AM 1530 licence to the FCC any time soon....I think it's been longer than the requisite five years for doing the "choose one" thing, right?

Or has the FCC forgotten about that?

The station that's now WTKK was WSJZ doing smooth jazz until a few years
ago.

I'd get the specific dates if bleeping svartifoss2.fcc.gov was up.  That
thing has been up and down more often in the past two weeks than <insert
least favorite politician>.

Have you ever met the owner Bob Bittner?  He also owns WJTO in Bath, Maine.  I think that's one is either oan AM 73 or AM 75...

Both of them used to program instrumental music, but in the past few months he has tweaked it into a mix of standards, instrumentals and some very very limited soft pop.  Terrific mix.

Also is the host of the two-hour long monthly "Let's Talk About Radio" show on Sundays.  Used to be a weekly hour long show.

Muzak, now delivered mostly by satellite, has many, many choices, ranging
form oldies to thematic (Spanish, Mexican, etc.).

KPLS started life as a talk station, owned by Danny Villanueva, the Rams
player and one of the founders of Univision.

Radiovisa has announced plans for programming. In fact, they are syndicating
their format right now, and have been doing so for nearly a year. "Gerardo
en la Ma�ana" is currently heard on a dozen or so smaller market stations,

and they have both news and other talk shows covering about 12 hours a day at present on their satellite hookup.

The format is called "Spanish hot talk." Small point: it is Radiovisa, not Radio Visa... sort of a copy of the Televisa name from Mexico.

I wonder if there are any 50KW AM vacuum tube transmitters in use anymore? I read the excellent article about the Harris 50KW solid state xmtr that WLW uses, pretty neat. In the sixties, what would be the plate voltage and current for a PA running 50KW in AM? I'm sure they would use three phase input power, but how much filter capacitance would be needed to insure a quiet carrier? Always wanted to know.
Regards,
Tom

Muzak also delivers some of their formats in disk form.  Don't know if they're standard CDs or MP-3 disks.  But knowing Muzak it's probably MP-3 disks...there's a note on the disks that say something to the effect of "for use only on Muzak equipment."  I saw a couple of them lying around on the counter of a Popeye's Fried Chicken store once.

I'm sure someone with a combi MP3-disk and CD player might be able to take them for a spin.... :)

There are two types of these devices: active and passive. Actives are illegal. Passives don't work.

But the issue that would be relevant to your complaint, is that it IS illegal to advertise a product that is itself illegal. As it is illegal to advertise a product that encourages an illegal activity.

Once you get lawyers flying on this one, sell tickets. It can be quite a circus.

From the Personal Files: I programmed a station downstate, and one afternoon heard a spot hit the air for a local head shop. The spot was produced by the sales duck (as insisted by Manglement) and actually used the term "head shop." As I listened the spot went on to describe the benefits of a personal roach clip, before giving the address, and closing out the spot. I pulled the spot, went to the Sales Mangler to inform him of such, and then to the sales duck and told him what I had done. Within 2 minutes the General Mangler was in my fact about the spot, the evils of programming 'geniuses' censoring spot copy, and depriving the station of needed revenue. The spot was running ROS/Standby, which meant at this station, that they were sold literally as filler, to occupy spaces in the event of a cancellation. This spot was about $5 per airing. Hell, the whole buy was less than $100.

Well, while the GM was going on, I mentioned to him that this was a spot for a head shop, advertising a roach clip, encouraging drug use, and all for $5, I didn't think it was worth jeopardizing the license. He rescheduled the spot and told me to mind my own business. And to get a law degree before I started acting as his station's counsel.

I went to corporate counsel, who told me that the spot was fine. I went to NAB, who didn't offer an opinion. I went to the IAB which didn't want to get involved, given my GM's position.

So, I went to FCC in Springfield. They told me flat out, the spot was illegal, because it encouraged an illegal activity. Further, since paraphernalia was illegal in Illinois, the spot advertised an illegal product. And that this was license threatening.

I asked if I could have that in writing sent to my General Mangler, and it was agreed that would be a good thing.

Meanwhile, I was advised, to pull the spot on advice of FCC.

Which I relayed to Sales and General Manglement, with a courtesy mention to the offending duck.

What followed was a Keystone Cops series of threats, arguments, and general disparagement of my lineage and multiplicative proclivities.  This went on at work as well as well as at home, both on the phone and at my front door, for about 24 hours, until the GM received a letter from Springfield.

At this point he pulled and read the copy from the continuity office, then listened to the spot for the first time. He got the Sales mangler, and played the spot for him. Then they both got the sales duck in question and played the spot for him.  And asked what the F*CK he was thinking.

After about 10 minutes the General Mangler returned to my office, thanked me for my vigilance, confirmed that I was right, and left.  It was, by the Chief Engineer's observation, the first time any PD had won an argument with Steve Bellinger.

I didn't stay long at that station.  Bigger things were already in the works.

I'm sure, however, had I stayed, Steve would have tied hundred dollar bills to my legs and tossed ME out of an airplane.

He was kind of known for that sort of thing by then.

But you already know THAT story......

Great.  That's all Los Angeles needs.  Another damned foreign-language station.

Soon every radio and television station here will be broadcast entirely in spanish.  And english audio will only appear on the SAP subcarriers, where available.

They are certainly dwindling.  I've visited a few sites that still have Continental 317s active, but for the most part these transmitters are being retired rather rapidly now, in favor of new Harris and

Nautel solid-state units.

The situation is less clear on the UHF-TV side. Many high-power UHF stations still use Klystron-based transmitters, and newer high-power installations still use tube-based transmitters.

I wonder if there are any 50KW AM vacuum tube transmitters in use anymore? I read the excellent article about the Harris 50KW solid state xmtr that WLW uses, pretty neat. In the sixties, what would be the plate voltage and current for a PA running 50KW in AM? I'm sure they would use three phase input power, but how much filter capacitance would be needed to insure a quiet carrier? Always wanted to know.
>>

I'm sure there are still a few RCA Amplifuzz's out there.

There are a pair of RCA BTA-50Fs (high-level plate modulated) in Cleveland.

The Harris MW-50 has tubes.

With a Harris DX-50 requiring only 86 KVA for 100 percent modulation, and an RCA BTA-50F requiring about 150 KVA for 100 percent modulation, the economics are heavily weighted in favor of solid-state 50 Ks.

The DX-50 can generate 50 kW from three voltages of about 200 volts and below (see the Harris patent for details). The BTA-50F requires several kV (seven ?) to do the same.

Almost all older transmitters of 5 kW and above were three-phase.

You could run a 5 kW or 10kW on a rotary phase converter if you were desperate.

50 kW requires three-phase, usually 277/480.

Especially since the older tube transmitters won't work well with IBOC according to articles I've read in BE Radio magazine.  You really need a solid-state transmitter.

Just like most FM Stereo receivers, modern AM Stereo receivers employ a Stereo Blend feature which progressively blends weak and/or unstable signals toward mono in order to improve the reception quality.

In general, considerable improvement has been made in the quality of AM Stereo reception of weaker signals.  The following web site offers some sample recordings of the new Fanfare FTA-100P tuner, receiving clear, noise-free AM Stereo from stations up to 80 miles away during the *daytime*:

The endless proposers of AM stereo fail to keep in mind one thing.

WHO ON EARTH is going to pay US$1,700 for an AM Stereo (or even an AM/FM) tuner that has to be then connected to a stand-alone amplifier so they can listen to Michael Savage or Rush Limbaugh in stereo?

You're talking about people who buy US$10 portable off-brand radios at closeout and discount spots and also those all-in-one ministereos that cost at most a couple of hundred dollars.

Most of these things sound crappy to begin with and are mostly bought becasue the people want to either listen to their music at work or blast it with lots of bass at home for a party.  And usually they're playing tapes, records or mostly CDs.

Please note that this is also my reservation towards AM (and FM) IBOC. People won't buy these things if the improvement in sound quality is practically negligible if all you're going to do is listen to the same talk and music you can get from a $20 boombox.

Explains why the government is pushing to get the analog side of things shut off....they just want to tinker with market forces and twist them to suit their convenience.

But aren't there still a lot of tube 50s in backup role?  A couple of years
ago WTOP still had a tube rig as backup.
